### Chapel Car Evangelist in City.

Rev. J. Franklin Day, the chapel car evangelist will speak at the Baptist church Sunday evening. Rev. Day is a man of wide experience as a gospel worker. For the past ten years he has been connected with the American Baptist Publication society as a missionary evangelist and colporteur. He is considered one of the most efficient workers in this line in the Northwest. Recently, Rev. Day has been conducting evangelistic services in Utah, Idaho and Eastern Oregon, where he has met with marked success. The First Baptist church of Carleton has recently extended a call to Rev. Day and he will resign the chapel car work to take this charge July 1st. About 11 years ago Rev. Day was pastor of the Baptist church of this city, where he has many warm friends. The ordinance of baptism will be observed, the pastor, Rev. R. E. Close, officiating.

### Island City Church.

Sabbath School at 10 a. m. Preaching services at 11 a. m. and 8 p. m. Epworth League at 7 o'clock. Rev. Beatty, Pastor.

Black, Bishop. Telephone Main 754.

### Imaginary Heart Trouble.

Do you have pains in the region of the heart? Does your heart thump? Its terrible pounding alarms you? What is wrong? Do you believe these symptoms mean heart trouble? Organic diseases of the heart very seldom occasion much pain. Nearly all of their pains are caused by some derangement of the stomach. Meritol Tonic Digestive is especially recommended for indigestion and dyspepsia, and for restoring the stomach to its normal functions and—no more "heart disease." Newlin Drug Co.—Exclusive agents.—Adv.

# FIRST ASSAULT HALTS BLIGHT

### COUNTY EXPERT WARNS GROWERS AGAINST CARELESSNESS.

### Battle but Half Won, Future Attention Being Necessary.

BY CLAUDE C. CATE. (County Farm Expert.)

I wish to thank the farmers and fruit growers of the Grande Ronde valley for the excellent way in which they have responded to the call for the control of pear and apple blight of the valley. And I feel that the success that we have attained so far in eliminating holdover blight, in a very large measure due to the prompt action of the many farmers and fruitgrowers in combating this dreadful disease. Many of the farmers have set aside other work that was very pressing in order to assist in the general cleanup of the holdover blight. Teams that were needed very badly in the field have been laid off, and the men armed with pruning shears and saws have done noble work in following out the directions for stamping out the disease. It is only with such unity of action, that anything of importance along the line of blight control may be accomplished. I believe that a great deal of good has been done in this spring cleanup but sometimes I am fearful, that through a misunderstanding of the life history of the blight germ, some may be willing to rest upon results previously obtained, and from negligence or misinformation, cease to keep eternally after the disease.

I would like to urge or remind the owners of fruit trees, that in order to reap the fullest benefits of the efforts already exercised, we must keep a diligent watch for all new infection and remove every branch or twig as soon as discovered to be diseased.

It is nearing the time when blight will be in evidence, in fact some new blight has been found already, and it will be found advantageous by every orchardist to patrol the premises set to pears and apples and remove all evidences of blight as fast as it appears. Be sure in cutting out blight in the summer form to thoroughly disinfect all wounds and instruments after each cut. The germ at this time is easily transferred from one cut to another, and unless careful methods are used in disinfecting, spreading of the disease may result instead of suppressing it.

Do not be deceived and eventually damaged by the thought that blight will not strike us this season. Do not experiment with diseased limbs or trees just to see what the results will be. Diseased portions may ooze little or much and the exuded sap contain many germs, which may be carried from place to place by various insects that visit these moist places to obtain food from the sugary contents of the sap, thereby becoming laden with the germs and then carry them to other places where new infections may appear. So in destroying this new blight as soon as it appears, a source of infection for future is destroyed, and untold damage is prevented that would occur later in the season. Again by removing the branches as soon as they show infection, much damage is prevented to the infected tree by heading off the disease before it reaches the larger limbs or trunk.

Blight germs may gain entrance to the fleshy bark and cambium of the larger limb or trunk through the blossoms, water sprouts, and buds that have become infected and allowed to remain on the tree until the germs find their way down to the main limbs, other methods of entrance may be through growth cracks, wounds caused by pruning, spraying, or cultivating or by insect punctures, and in fact anything that may cause a break in the bark and expose the tender and moist tissues. Insects like green aphids and caterpillars that have come in contact with the germs may spread the disease by eating the tender tissues of the small twigs.

Remember the main object in controlling blight is to eliminate the source of infection. This we have tried to do by cutting out the hold-over blight before the blossoms open, and if we could destroy every hold-over conkers before buds break in the spring, we would not be bothered with any blight during the summer. While noble work has been done in endeavoring to accomplish this condition, we have undoubtedly missed some that will crop out this summer. Let our main efforts be to destroy all infested branches as fast as they appear, and remember that the all important thing is to remove the source that is causing trouble now, and what, if left alone, will cause it another year.

Some people lose heart in the work because they hear that blight is to be found in the trees in the forests, and naturally think that all efforts to control it in our cultivated trees will be useless. While the germ does not effect other trees, it has never been found to winter over on trees other than the pear, apple

and possibly the quince. So in eradicating the holdover on our cultivated trees, we will not be bothered with it on the wild trees. Some of the plants attacked by this germ are service berry, mountain ash, wild pear and apple, haw or thorne, and in fact all varieties of the pomus fruits. There are many forest trees that have blighted limbs, but these are not caused by this germ, hence should not cause any alarm to orchardists.

This is not a disease that should require thought and action by orchardists alone, but every farmer or person who has a few trees should be deeply interested and use all means to assist in controlling it. I have met parties in the valley who came here from various places in the central states, not because they could better their conditions in regard to general farming, but because in addition, they could have various kinds of good fruits in their door yards, which was a luxury never known in their old homes. Many expressions I have heard similar to the following: "We used to have all the nice apples and pears that we could use, but oh my, look at the orchard now, or the place where the orchard used to be." So it is difficult for some to realize the danger until it is too late.

Much could be written about the damage done by blight in other districts, and much about what has been done in controlling it in infected districts. Some brilliant examples stand out as monuments to the efforts of some communities that have worked in unison. "Eternal vigilance is the price of an orchard," and especially so when blight is a factor in its development. Don't expect to see the blight germ with the unaided eye. It would require 2,500 of them placed end to end to make an inch in length. Use corrosive sublimate for disinfection and no other.

Again I wish to thank the people of Union county who have performed the first part of the blight control so nobly and promptly, and hope that they will realize that the work is just begun, and be prepared for more vigorous action this summer. Demonstrations will be conducted in regard to cutting out and treating blighted trees wherever demanded.

### A Reliable Hair Tonic.

It is an easy matter to prevent diseases of the scalp by using Meritol Hair Tonic. It should be used regularly to keep the scalp free of germs, as these germs are the cause of the majority of cases of dandruff and later, baldness. We are authorized to guarantee Meritol Hair Tonic. Newlin Drug Co. Exclusive agents.—Adv.

### Artisans Notice.

Dr. Eshelman will be in attendance at the regular meeting of the United Artisans on Monday, June 1st, and will examine all candidates free of charge. Election of officers will also be held and a full attendance of members is desired.—Secretary. 5 27- 4t

### CHILDREN WHO ARE SICKLY

Mothers who value their own comfort and the welfare of their children, should never be without a box of Mother's Sweet Powders for Children, for use throughout the season. They Break up Colds, Relieve Feverishness, Constipation, Teething Disorders, Headache and Stomach Troubles. Used by Mothers for 24 years. THESE POWDERS NEVER FAIL. Sold by all Drug Stores, etc. Don't accept any substitutes. Sample mailed FREE. Address, Allen S. Olmsted, Le Roy, N. Y. Adv.
