EYE, EAR, NOSE, THROAT SPECIALIST
DR. H. M. BOUVY—Practice limited exclusively to diseases and surgery of Eye, Ear, Nose and Throat and the Fitting of Glasses. Office West Jacobson Bldg. Office phone Red 3431. Residence, Main 39.

Looking For a Sign
Washington, August 5.—A well-dressed tourist stopped Democratic Leader Kern in front of the capitol. "What building is that?" he asked. "The capitol of the United States," replied Kern, with just the suggestion of a smile.

OSTEOPATHIC PHYSICIANS
DR. J. L. INGLE—Osteopathic physician.

DOWNWARD COURSE
Fast Being Realized by La Grande People.

DRS. DARLAND—Chiropractic parlors 4th and Depot street. Phone Red 1761.

A little backache at first. Daily increasing 'till the back is lame and weak. Urinary disorders may quickly follow;

DRS. ALLEN & ALLEN—Chiropractors. Office hours 9:30 to 12 a. m.; 2 to 5 and 7 to 9 p. m. Phone Red 3231; over Family Restaurant, 209 Fir street, La Grande, Oregon.

Dropsy and often Bright's disease. This frequently is the downward course of kidney ills. Don't take this course. Follow the advice of a La Grande citizen.

Mrs. C. I. Johnson, 802 Spring St., La Grande, says: "I am subject to kidney disorders at times, causing a dull pain across the small of my back. My head aches and at times I get so dizzy that I can hardly walk across the floor. During this trouble, my kidneys are very irregular in action and I feel miserable all over. After I have taken a box or two of Doan's Kidney Pills, however, I am free from kidney trouble. My back stops aching, my kidneys act regularly and in every way I feel as well as ever."

Price 50c, at all dealers. Don't simply ask for a kidney remedy—get Doan's Kidney Pills—the same that Mrs. Johnson had. Foster-Milburn Co., Props., Buffalo, N. Y.—Adv.

CHICHESTER'S PILLS

Ladies! Ask your Druggist for Chichester's Diamond Brand Pills in Red and Gold wrapper. Beware of cheap imitations. Take no other. Buy only the Diamond Brand Pills. For 25 years known as Best, Safest, Always Reliable. SOLD BY DRUGGISTS EVERYWHERE

FIGHTING THE DANGEROUS FLY

Since practically all houseflies owe their birth to horse manure a little care given to the proper disposition of stable droppings will prove more effective than any other single measure in reducing the number of flies, writes Dr. A. L. Melander, Entomologist of the Washington Experiment Station, in the Bulletin of the Women's Municipal League of Boston.

Flies are extremely partial to fresh manure. Even if the stables are kept constantly cleaned some eggs are laid in the droppings. This makes necessary two lines of treatment. First, flies must be kept away from the main manure heap. This can readily be done by keeping the manure enclosed in a fly-proof vault or bin.

Of the many methods of killing the maggots that develop during the temporary storage of manure the following are the most practical.

1. Destroying by the spontaneous heat developed by manure. Fly maggots can not survive a temperature greater than one hundred fifty degrees. So much heat is generated by fermenting manure that maggots in an ordinary heap can not live more than a few inches below the surface.

2. Destroying by the use of traps. Because of the tendency of full-grown maggots to migrate when about to pupate, flies can be prevented from coming into existence by the following expedient. The manure is to be supported on a slotted platform or by one-fourth inch galvanized iron netting, underneath which is a shallow tray containing some kerosened water. Whatever maggots wriggle through, fall into the water and are drowned.

If manure is to be stored in ordinary fly-tight bins or pits for more than a week, so that adult flies have time to appear, a common conical fly-trap placed over a hole cut in the lid of the bin is effective in catching the flies as they seek the light which comes through the hole.

3. Destroying maggots by the use of insecticides. The United States Department of Agriculture recommends either of the next two formulas:

a. Powdered borax dusted evenly over the manure at the rate of one ounce to each cubic foot, followed by a wetting down with water. Or, the borax may be previously dissolved and then sprinkled over the manure. If subsequently the treated manure is to be used for fertilizer it should not be applied heavier than fifteen tons to the acre or injury to the crop might result.

b. One-half pound hellebore powder is extracted for twenty-four hours with ten gallons of water, when it is ready to treat ten cubic feet (eight bushels) of manure.

c. Iron sulphate, or green vitriol, is a cheap chemical commonly used as a deodorant about stables. It may be applied dry to droppings at the rate of one to three pounds per horse per day, or the same quantity may be sprinkled in concentrated solution in the storage vault. If stable floors are not tightly constructed a copious amount of iron sulphate should be applied underneath the stalls where flies might breed.

Arsenite of soda, white arsenic, Paris green and other arsenicals have been suggested but they are poisonous to plant life as well as to chickens and native birds that frequent a top dressing of fertilizer, therefore should not be used.

Other suggested chemicals such as kerosene, cresol, formalin, chloride of lime and lime possess the following disadvantages aside from their expense. Chloride of lime is corrosive and irritating; and disinfectants like formalin and cresol are more destructive to bacteria than to insect maggots, and hence impoverish the manure of perhaps its greatest agricultural asset, its bacterial content.

Vigorous Work in Water and Air. Berlin, (via Sayville)—Aug. 4.—A German submarine sank eight English motor sailing ships and one English steam trawler off the English coast on July 28th, according to information released in Berlin today.

Fourteen large Italian battle planes flew over Austria Tuesday.

Austrian Lieutenant Banfield fought the fleet single handed. He ascended at Trieste and chased the Italian squadron across the Istrian peninsula. He destroyed one machine and killed a pilot besides capturing two observers.

COMING SLUMP IN WAR-ORDERS

Over three billion dollars for war-supplies of every kind and half a billion for munitions alone have been spent in this country by the Allies since the war began, according to estimates reported by the Washington Post. But this enormous business, as the New York Evening Sun and other dailies have been pointing out of late, "is on the verge of a slump."

These observers are convinced by the statements of Mr. Lloyd-George quoted on page 243 and by other evidence that the Allies are now in a position to make practically all the munitions they need, while the New York Evening Post discerns "signs that the industrial-world is beginning to believe in the coming of peace."

"From all over the globe our steel trade is receiving orders for ship-plates for merchant vessels, while it is widely reported that no war-material orders are being given to run after January 1 next. This may be in part due to the increased production of British and Russian factories; none the less, it is possible to deduce some belief in a lightening of Europe's horizon. So far as our own war-order companies are concerned, it was announced recently that the Du Pont powder-mills had cut off one shift of men, and the Westinghouse Air-Brake Company is dismantling some of the buildings it used for the making of munitions. In addition, there are known to be numerous cases where plans are already under way to convert mushroom war-order plants into factories for the production of tin-plate, dye-stuffs, and other material needed in the peaceful arts. All of this, be it noted, has disturbed Wall Street not at all, so that those prophets who have looked for a violent convulsion at the close of the war may well take courage."

Such a gradual let-down in the war-munitions business is a good thing for this country, agree several editors. We can soon judge, says the Washington Times, "whether general prosperity in this country is at such high tide that its overflow can fill the industrial interstices left by the falling off of special war-orders." By thus being able "to discount the effect of the disappearance of the business on which our prosperity rested," thinks the Baltimore News, "we are avoiding convulsion when otherwise the end of the war might have been reasonably sure to provoke it." The gradual decline in making arms and ammunition will also help, the New York Commercial thinks, by tending to relieve the scarcity of labor. No matter how long the war may last, it adds.

"It is probable that we have seen the best days of the trade in arms and ammunition. Instead of repining we should go after other business aggressively in all parts of the world."

As an important spokesman for the most important industry affected by these developments, The Iron Age sets it down as "a noteworthy fact that several companies which produced shells are not anxious for further work of the kind if it were to be had. One reason may be the closer margin of profit which has prevailed in recent months, while another is the extent to which activity in the regular lines of these companies has increased."

A representative of one of the Allied nations is quoted by the New York Evening Sun as saying of the war-order situation:

"A maximum of production of shells, etc., in your country will be reached in October. There may be some falling off in the business previous to that time, but in the late fall and winter the decline will be general. "Several reasons may be attributed to the passing of the munitions boom. In the first place, large contracts which had to be placed outside of the home countries because of the inability of the manufacturers there to fill them have been completed. In the meantime the home industries have been developed to such a point that they are now able to meet the situation. That is so in England, and I believe the same thing has been done in France and Russia."

"There still seems to be need for plenty of shells, munitions, and machinery, and for that reason my government and others of the United States will continue to look to the United States to furnish raw materials. Metals will be needed in great quantities, and so will castings. While the shipment of manufactured munitions will undoubtedly fall off in the very near future, there will, on the other hand, be an increase in the export of the raw materials."

Today's Baseball Freak

New York, August 5.—Introducing Catcher George Block, The Human Baseball. The leagues are tossing George back and forth in every direction. Four times in ten days recently he changed uniforms. St. Joseph released Block to Wichita, and Wichita in a few days sent him back. St. Joseph re-signed him and a few days later released him to Milwaukee, which team he has joined.
