ARCADE

Edna Goodrich Film Coming.

Edna Goodrich, the celebrated beauty and dramatic actress who is to appear in Morosco-Paramount feature "The Making of Maddalena" at the Arcade theatre Friday and Saturday has had a long and brilliant career. The principal successes of the many Miss Goodrich attained on the dramatic stage after a beginning in musical comedy were—"The Genius," her own production which proved such a hit that she became Nat Goodwin's leading lady in "When We Were Twenty-one;" then co-star with Goodwin in "The Gilded Fool," "In Missouri," "The American Citizen," "The Master Hand," "The Native Son," "What Would a Gentleman Do?" and "The Merchant of Venice."

Miss Goodrich was approached by Dan Frohman in 1914 to join the Famous Players Co., but did not enter the field of pictures until this year. Her latest and best production, "The Making of Maddalena" is the story of a beautiful Italian model who marries a young American only to be drawn through a refining furnace of suffering to emerge a finished American Lady.

SHERRY'S

AT SHERRY'S TODAY.

"Hypocrisy," Starring Miss Virginia Pearson Tells Daringly of High Life.

Everybody familiar with the social life of every city from Atlantic to Pacific knows the social shams which come of false standards usually associated with wealth and ambition. But probably never has this familiar defect of our American life been so boldly and effectively laid before the gaze of all as in the William Fox photodrama, "Hypocrisy," in which that Southern beauty, Virginia Pearson, is leading woman.

The picture play "Hypocrisy" tells with forceful moral just what makes so-called high society really so low in many of its phases. It lays bare the vices of social ambition, marriage for anything but love, men's business race for gold, women's climb to social glory, and all the dangers of gambling, when in stock and bonds or at the fashionable bidge.

The basis of the play was taken from New York life, where probably America's money-mad and social-climbing race is most completely accentuated. But it applies as well to the unwritten histories of every town of any size, to those stories of social disgrace which are whispered from

ear to ear among the city's upper class and which are known but never printed in every newspaper office of the land. In "Hypocrisy" all will have a chance to see society as it really is—not all bad, for society is human, but not as its pose and sham and bluff leads so many to think it is.

Plan to Consolidate Public Service Boards.

Ashland, Or., Aug. 15.—Initiative petitions were put in circulation here yesterday for a special election to be held in September, at which a proposition will be submitted to the people in the form of a charter amendment, abolishing the park board and the Springs water commission and electing a new commission of three members to have control of the parks and mineral water systems of the city. Two separate commissions have the care of the parks and mineral water plants now and lack of harmony has at times threatened. The proposed change, it is expected, will result in making the parks and plants pay for their own upkeep.

Mining Under Illinois Cornfields

In the popular mind most metal mining is associated with mountainous regions. We know that coal is mined near cornfields, but how many, offhand, would locate lead and zinc deposits in grain fields? A recent publication by the United States Geological Survey describes a thickly settled agricultural district in northwestern Illinois where corn, oats, and hay are raised on the surface and lead and zinc are extracted from the rocks beneath the fields.

The publication referred to is one of the units of the great geologic atlas of the United States and describes the Galena and Elizabeth quadrangles, in Illinois. The field surveys for this report were made under cooperative agreement between the United States Geological Survey and the State of Illinois. Eugene Wesley Shaw and Arthur C. Trowbridge are the authors. The area described lies in the extreme northeast corner of the State and is in the "driftless area," which was not covered by the continental glacier and therefore contains no glacial drift. The exposed rocks are wholly of sedimentary origin and consist of hard rock of Ordovician and Silurian age and unconsolidated surficial deposits. The report describes these rocks, shows the geologic structure or lay of the rocks, and gives the sequence of events in the geologic history of the area and an account of the mineral resources.

Although agriculture is the principal industry several hundred men are engaged in zinc and lead mining. The most productive mines are grouped in certain rather small districts known as the Galena, the Sand Prairie, and the

New Editor at Lostine

Howard W. Shutt sold the Lostine Reporter last week to James W. Boyd, a new comer from the central

states. Mr. Boyd came to Oregon hoping the change would be for the benefit of the health of a child and was much pleased with Willoughby county, where he should do well. Mr. Shutt is at Joseph this week, helping Editor W. C. Black in the Herald office. Major S. P. Shutt, since selling the Herald, is planning on going back to the home of his boyhood in Virginia, and Howard probably will also go.—Enterprise Chieftain.

"I Am Tired of Blushing for My Country," Says Mrs. Wickersham.

BY MRS. GEORGE WICKERSHAM. (Wife of the former U. S. Attorney General.)

New York, Aug. 16.—I am tired of blushing for my country. Never did I think to hang my head as I have been forced to do during the last three years. I am a member of the Women's committee of the National Hughes Alliance purely on the score of patriotism. Personally I am an anti-suffragist, but all my energies and interests are concentrated on the coming election. I long to be proud of it; proud of our spirit at home and proud of our reputation abroad; and I want to pass that pride on to my son and my grandsons. We must stand before the world as a nation composed in strength but absolutely ready at every point to back up its ideals when action is necessary. I think the real issue of this campaign is patriotism and I think a great many of us of varying political convictions are going to work together for the welfare of the country. I am a firm believer in clearly defined political parties, but there are times and conditions in the political history of a country like ours when we must all unite on the big issues and agree to differ about the lesser. As an anti-suffragist I am not concerned with political organization as such, but as a citizen of this country I am deeply concerned for its welfare. Do I believe preparedness must be made an issue? Yes, indeed. And I want every man and woman in this country to be made to feel a sense of responsibility about serving it in some way. I want people to learn that preparedness cannot be settled entirely by Congress; that it is an individual matter and that we must take it up individually to make it national.

The Hero Of Manila Goes To Bed At 9 O'clock

Among the interesting people of the September American Magazine is Admiral Dewey who gives some reasons why he is hale and hearty at 78. The writer says:

"Every night at nine o'clock finds Dewey in bed because he was taught as a boy that an hour of sleep before midnight is equal to two hours after midnight. Along about 4 A. M. he wakes up; but he lies in bed and reads until six o'clock, which he regards as a respectable rising hour. After breakfast he reads until time to go to his office at the General Board of the Navy, where he puts in two or three hours a day. If the weather is pleasant he walks to the office and walks back home, about half a mile each way; if the weather is unfavorable he goes in his limousine. In case of the slightest suggestion of a cold he does not go out at all."

Many Big Icebergs Are Found. Seattle, Wash., Aug. 15.—The captains of the steamers Humboldt and City of Seattle which arrived here yesterday from Southeastern Alaska ports, report steaming through an unusually large number of icebergs in the inside passage, a short distance south of Juneau. Captain T. H. Cann, master of the City of Seattle, said that the great amount of ice forced him to anchor his vessel for a short time at Taku. A blazing sun has caused the Taku glacier to crumble away with great rapidity, and bergs as large as office buildings are adrift.

COMMISSION FOR CADETS

O. A. C. GRADUATES HAVE A CHANCE TO WRITE.

Competitive Examination Will Be Held Within a Short Time.

Oregon Agricultural College, Corvallis, Aug. 16.—(Special)—A second lieutenantcy in the United States army is open, by competitive examination, to all graduates of the Oregon Agricultural college who are not over 27 years of age. Examinations, according to an order issued August 3 from the war department, will be held on August 21 at some point in the Pacific Northwest to be subsequently designated by the adjutant general of the army, Washington, D. C., to whom applications should be made at once. Both a mental and a physical examination will be requisite to appointment, the mental examination including elementary French, German or Spanish, General History, elementary surveying, and a choice of advanced work in English, modern languages, analytical geometry, calculus, military art and field engineering, or advanced surveying.

The order from the war department explains that "About 1500 vacancies now exist in the grade of second lieutenant," and declares that "Under existing laws many of the officers appointed to these vacancies will be promoted to the grade of first lieutenant in the near future." The opportunity, therefore, is likely to prove very attractive to graduates of the Oregon Agricultural college and other land-grant colleges who aspire to military service as officers in the regular army. Specific information concerning the general character of the examinations may be obtained from any military post or from the office of the commandant of cadets at the Oregon Agricultural college. The first step for all applicants to take is to get in communication with the adjutant general of the army at Washington, who will furnish the necessary blanks for applying for examination, will designate the place of the examination, and give the necessary directions for securing testimonials as to character and fitness for appointment.

"Dinners And Funerals Cause Death" Says Admiral Dewey

Admiral Dewey, in the September American Magazine, says dinners and funerals kill more people than anything else, and so he goes to neither. The writer says:

"A while ago one of his old-time friends and associates in the Navy died. The man's family expected Dewey to act as one of the pallbearers but he was obliged to tell them that he adhered strictly to the rule against attending funerals.

"A funeral," he says, "is depressing and if I went to many I would soon go to my own."

"Frequently Dewey receives a dinner invitation that he would like to accept. He is tempted to do so. But he knows that the only way to have a rule effective against dining is to have it inviolate. Otherwise, one would be constantly exciting animosity of old friends for accepting one dinner invitation and declining another.

"There has never yet been invented a way to eat your cake and have it," says Dewey; "neither can you abuse your health and have it."

Big Junk Pile

During the year 1915 secondary metals were recovered from scrap, sweepings, etc., in the United States to the value of \$114,304,930, according to the annual statement on Secondary Metals issued by the U. S. Geological Survey. This report is now available for distribution.
