WANTED—An experienced girl for general kitchen work; must be good cook; good wages. Call at 1607 6th St., or phone Main 701. 6-19-6t

AN EELWORM DISEASE IN THE PACIFIC NORTHWEST

Washington, D. C., Aug. 26.—The occurrence and spread of the bulb and stem infesting nematode or eelworm (Tylenchys dipsaci), which has recently found producing a serious disease of clover in the State of Oregon, should receive general attention, especially in the Northwest. Since it was discovered in hyscynth bulbs at Bellingham in 1913, it has been observed each successive year causing damage to strawberries, onions, or clover in other localities of the Pacific Northwest.

Although the nematode has been authentically reported in this country only on hyscynth, onions, narcissus, clover, strawberries, and rye, yet it is known to attack in Europe many different species of plants. Some of the more important crop plants so attacked, in addition to those mentioned are: Barley, oats, wheat, alfalfa, turnip, kidney bean, broad bean, potato, flax, pea, and lupine. It causes the greatest damage perhaps to the hyscynth and other bulbous crops of Holland. It is particularly destructive to certain plants in Australia and has destroyed extensive areas of alfalfa in Southern Africa.

Many weeds and plants of less economic importance have also been found to be attacked in foreign countries. Some of these are; Forget-me-not, phlox, plantain, spear grass, bindweed, primrose, buttercup, sow thistle, penny cress, garlic, daisy, and teasel.

Unfortunately, it has been recently introduced into the United States and appears well established in some localities of the Pacific Northwest where conditions seem favorable for its reproduction and spread. Every effort should be made not only to prevent its further introduction into this country but also to prevent its spreading from those localities already infested.

On the aboveground parts of plants, the nematode in general produces characteristic distortions and usually yellow to brown longitudinal discolorations which clearly indicate the presence of the parasite. However, somewhat different effects are induced on different groups of its hosts. In hyscynth, onions, and other bulbous crops, affected leaves are not noticeably distorted or swollen, but become decidedly yellow in longitudinal streaks, finally wilt, and die. In more woody plants, such as rye, oats, clover and alfalfa, diseased leaves and stems are distorted, thickened, and yellow and the whole plant becomes dwarfed. When infested plants are not killed by the parasite they seldom reach maturity and usually fail to produce fruit.

Although primarily a pest of the aerial portions of plants, the nematode occurs in tubers and bulbs and has been reported on one plant, the hop, as the cause of a root disease. In onions hyscynth the nematode migrates at the end of the growing season from the leaves to the bulb so that the entire scales become invaded and discolored. Such bulbs, if not cut in cross sections, present one or more characteristic rings, thus giving rise to the common name of "the ring disease" when the malady occurs in hyscynth.

Description If a small piece of leaf of other infested tissue be carefully torn to pieces by means of pins or needles in a dish containing a few drops of clean water, many of the white, thread-like adult eelworms about one-fiftieth of an inch long can be seen with the naked eye actively moving about in the liquid.

Life Cycle Of The Organism Each female may produce a large number of eggs, which, if conditions be favorable, hatch directly into worm-shaped larvae. The latter reach maturity in about four weeks, so that several generations can be produced during a growing season. Larvae, or any of the subsequent developmental stages of the nematode, are capable under suitable conditions of penetrating and moving within certain tissues of its host plants and thereby producing the various effects already described.

Means Of Distribution The pest can be transported in many different ways. It was probably introduced into the United States in bulbs, tubers or plants or along with shipments of other material which may harbor the parasite. Seed are even strongly suspected as a means of distribution. It can be carried from one field to another by irrigation or surface water, in soil which clings to the feet of man or other animals, to implements, and to the roots of plants, and in garbage, manure, or waste matter of any kind containing parts of diseased tissue.

Control Various means of controlling the pest have been tried, but the most satisfactory as well as the most practicable method consists in the proper system of crop rotation with sanitary measures. By planting infested fields for two and, better still, three successive years to crops that are immune or resistant to the nematode, the pest will be starved out to such an extent that little infestation will occur on a susceptible crop planted on the following year. To make the rotation effective it is highly important that all weeds or other plants which might harbor the pest be scrupulously eliminated. For this reason, it is advisable to plant immune crops in rows so that clean cultivation may be practiced. The following plants, most or all of which are adapted to the Pacific Northwest, have not been reported as subject to the nematodes and are, therefore, suggested as rotation crops: Corn, cowpeas, soy beans, millets, tomatoes, asparagus, cabbage, lettuce, cantaloupes, and celery. Almost any other crop not listed above under the head of susceptible plants could also be used.

which the republican party has always stood and stands today. It is the republican tariff which gives industry the protection it needs.—Norwich Bulletin.

SIN IS REVIVAL THEME

EVANGELIST ADDRESSES AUDIENCE AT BAPTIST CHURCH WITH GREAT CLEARNESS.

Avers Three Consequences of Sin Are Mental, Physical and Moral—Will Speak Again Tonight.

Evangelist Marshall spoke last night on "The Doctrine of Sin." He said, in part:

"Sin is a transgression of God's law. God's law, like civil law, does not recognize accidents or ignorance. A broken law constitutes a sin. Sin has a three-fold consequence, mental, physical and moral. The mental and physical consequences are in this world, the moral in the hereafter. It is deadly; it is hereditary."

The evangelist illustrated the sermon with experiences from life:

Mr. Marshall has spent years in world travel and is qualified to speak on the subject tonight.

The subject tonight is "The Immortality of the Soul." Mr. Marshall especially invites the unbeliever, the thinker and anyone interested in the subject.

He challenges the contradiction successfully of the argument of the soul being immortal, either from a scientific standpoint or otherwise. The sermon begins at 7:30.

HUGHES' TOUR MEETS APPROVAL

New York, Sept. 21.—Cordial indorsement by William R. Wilcox, chairman of the Republican national committee, was given today to the Hughes campaign train, which the Republican women's campaign committee and the women's committee of the Hughes alliance are to send across the continent in October.

"The best thing about it is that it really has for its first object getting votes for Mr. Hughes," said Mr. Wilcox. "Women throughout the country are interested in showing that women's political activity is by no means wholly expressed in the cause of suffrage. This train is not a suffrage train. It is a practical expression of women's political co-operation with men for the election of Mr. Hughes, in a national crisis."

"Besides getting votes for Mr. Hughes, I think the campaign train will serve a large purpose as it goes through the 29 states in its itinerary, carrying a group of national women workers and speakers. It will unite women in national solidarity behind a national issue."

"The train will be financed and managed by women, and the party of speakers on the train will be entirely women."

Our Want Ads bring results. Industry Needs Better Protection

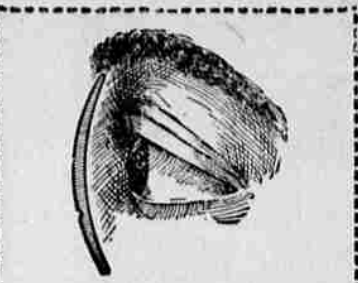

Strong support is given to the stand which Charles E. Hughes is taking in behalf of a protective tariff which will properly serve the industrial interests of this country by J. E. Ladlow of the Mansfield, Ohio, Tire and Rubber company, of which concerns the board of directors stand politically eight democrats and one republican, in a letter to the New York Herald when he says:

"In Europe the average wage for labor in rubber factories is \$1 a day. In America it is \$3 a day. In Europe they have all the late rubber machinery and equipment that we have here and then besides get their rubber at less cost, as it is shipped to London as a clearing house, and we have to pay the extra handling, plus a commission to the middlemen. Therefore we cannot compete on the product."

Yet in spite of this situation the Underwood-Simmons bill cut the tariff on manufactured goods from 35 per cent to 10 per cent with a few exceptions of 15 per cent and in the opinion of the writer "had it not been for the great war our plants would be closed down today."

This is an indictment of the democratic tariff which goes to the mark. It is a case where business men see their plight regardless of their political leanings. They have gone through the experiment of tariff for revenue only and they see the mistake as well as appreciate the part which the war has played in preventing business stagnation in this country. The relief from such a situation lies in adequate protection and it is that for

which the republican party has always stood and stands today. It is the republican tariff which gives industry the protection it needs.—Norwich Bulletin.

EYES OF ALL NATIONS

America and Germany are the greatest eyeglass and spectacle wearing nations of the world. Five Americans wear glasses to one of any other nation.

Deplorable were it not a fact that blindness in America has decreased over 20 per cent since the advent of glasses, while in every other country of the globe there is an actual increase.

Save Your Eyes Glasses fitted by Peare's will do this—We grind our own lenses. Factory on the Premises.

Building For The Future

The young business man measures the importance of his enterprise by the vision which he has of its ultimate growth.

The Officers of this Institution, in like manner, measure the importance of his bank account, not by the size of its initial deposit but by its possibilities for development.

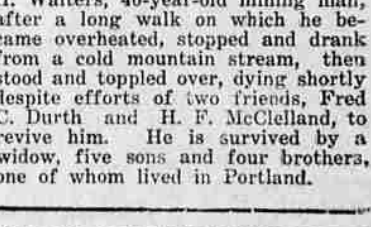

We cordially invite the accounts of young men embarking in the business world.

The United States National Bank

La Grande, Oregon.

Water Kills Overheated Man. Grants Pass, Or., Sept. 18.—Paul H. Walters, 40-year-old mining man, after a long walk on which he became overheated, stopped and drank from a cold mountain stream, then stood and toppled over, dying shortly despite efforts of two friends, Fred C. Durth and H. F. McClelland, to revive him. He is survived by a widow, five sons and four brothers, one of whom lived in Portland.
