Sporting News

New York, Oct. 11.—Howard Drew, the wonderful colored sprinter, who was counted out of participation in all future athletics a short time ago when he suffered a stroke of paralysis, had a short but brilliant career before he was stricken. He held the world's record for the 100-yard dash, 9 3-5 seconds, and many times has stepped that distance of 9-35 seconds is accepted as the only legitimate one, although the record books show that Dan Kelly once did the distance in that time. His mark is not accepted as genuine. Drew never lost his form from the moment of the shot which started the race until the finish. After capturing the Yale championship Drew took part in the eastern tryouts for the Olympic games, which were held in the Harvard Stadium, and won the 100 metres in the record

time of 10 4-5. He went to Stockholm and won his heat in the 100 metres event in 11 seconds, and qualified for the final heat in the second tries. But he pulled a tendon in doing it and was forced to drop out of the final dash. The race was well taken care of, however, for it was won by Ralph Craig of Detroit, and two other American runners. Drew left the east more than two years ago and went to California, where he took up the study of law at the University of Southern California. It was while taking part in a western meet that Drew stepped the 100-yard dash in 9 3-5. Drew has had trouble with the tendon in his leg since it was injured in Stockholm and in his races last winter in New York, during which time he took part in several sprints in armories, running on hard board floors, the injury was

aggravated. He took part in the trials for the A. A. U. meets this year and was beaten by Harry Williams of Spokane in 9 4-5 seconds. He also again pulled the injured tendon out of place. Drew was forced out of athletics and a few days later word came that he had been stricken with paralysis.

The case was reported last Thursday evening and the school was closed Friday while the rooms were disinfected. School resumed sessions Monday and no additional diphtheria cases are likely to appear.
