**Baroness Fights
Suit for Gifts**

Baroness May de Pallandt is fighting in New York a suit to recover \$125,000 in shares of Westinghouse stock given her by Miss Frank Gray Shaver of Highland Park, Ill. Miss Shaver says she made gifts to the baroness through close friendship but finally decided she was being swindled. The baroness was the daughter of Jacob and Mrs. Sophie Dugas of Monroeville, Mich.

MIKE GIBBONS WEARS A WRIST WATCH

St. Paul, Minn., Jan. 18.—(United Press)—Mike Gibbons, probably world champion middleweight boxer, wears a wrist watch. It was given him by his affectionate brother Tommp. Mike says the prejudice against the wrist watch is nonsense and that it is much more practical than the pocket variety.

LES DARCY COMMENTS ON POOR ARENAS HE MEETS IN THE U. S.

"In Australia," He Says, "They Wouldn't Stand for These Dirty Barns and the Haze of Smoke—In Some Arenas of the West, However, Smoking Is Forbidden."

BY H. C. HAMILTON
(United Press Staff Correspondent.)

New York, Jan. 18.—When Les Darcy took a notion recently to go to a few American fight clubs and see how things are done in this country he didn't have even a hunch as to what he was getting into. When he returned and washed the smoke out of his eyes he gave vent to his feelings.

"In Australia," he declared, "they wouldn't stand for those dirty barns and that haze of smoke. When a fellow has to exert himself he also has to breathe and any one who would ask him to work in smoke-filled disgraceful arenas like those I have seen should be barred from staging bouts. I suppose I will have to go through it if I fight in New York, but I'll never quit kicking about it."

And Darcy is right. Here is the largest city in the world, there are very few fight clubs where big bouts can be held, and they look worse than Darcy described them.

In two of the biggest clubs one entrance is provided and it becomes so jammed it is difficult to get through the door. Exits are almost as bad. The floors are bad, the light is bad and the ventilation is bad. Smoke gathers in great rings and blankets. It fills the spectators' eyes with tears and the boxers with agony and resentment. The condition is almost intolerable.

Madison Square Garden is no use as a boxing arena. It is better than the other enclosures.

In the west, where they have big arenas and plenty of good bouts, there are clean arenas, where smoking is forbidden and the edict enforced, and where entrances and exits are so prevalent that an army could pass in and out without and discipline, in half the time it takes to fill and empty one of the New York fight clubs.

Clarence Walker is to have a rival. Clarence Rowland is said to have signed an outfielder who, when he was a pitcher, was the wildest heaver in captivity.

Clarke Griffith will now win his annual pennant.

The paragraphs having all guessed that there now is less Darcy we will hear from those who have something for the good of the order.

The south is resigned to its fate. Having entertained baseball players before it knows just what is coming.

AMATEUR BASEBALL HEADS TO MEET IN TOLEDO, OHIO

Toledo, O., Jan. 18.—(United Press)—The question of how long a professional ball player should have been retired from the professional rank before he is eligible to join any of the clubs under the supervision of the National Baseball Federation will be one of the most important matters to come up at the second annual meeting of the Federation Friday at the Hotel Secor here.

The National Baseball Federation does not insist upon the rulings, "once a professional, always a professional." The Federation takes the view that the younger players are better off for having experienced veterans to coach them. But the Federation does not wish to have a loophole for professional players to get into the amateur and semi-professional ranks by the allure-

ments of easy jobs with firms fostering and supporting representative clubs.

At present the National Baseball Federation has two classifications of players: Class A—those players who receive no monetary remuneration for their services as a player during the current season (in other words amateurs); Class AA—those players who do not earn a livelihood by their services as players (in other words, players who receive small sums of money for playing ball with his own or another club, but earns his living in another manner entirely, these players being commonly known as semi-professionals).

Pennsylvania Plans Huge Stadium

Even Greater Amphitheater Than Massive Yale Bowl Is Being Planned for the University of Pennsylvania—Stadium Is Needed to Seat 100,000 People.

BY H. C. HAMILTON
(United Press Staff Correspondent.)

New York, Jan. 18.—An even greater amphitheater than the massive Yale Bowl in which Yale's athletic contests are held, towering out of Woodlands Ravine at Philadelphia, is planned for the University of Pennsylvania. Steps already have been taken to assure erection of the structure. Alumni, students and faculty are working hard to make the dream a reality.

Present plans for the structure call for an amphitheater which will seat 100,000 persons, many thousands more than can be jammed into Franklin field even by the greatest effort.

The need of a new stadium became positive at the Pennsylvania-Cornell football game last Thanksgiving day, when thousands were unable to gain admission.

To erect the stadium the usual procedure probably will be followed. Alumni will guarantee funds, receiving interest on the sums out of proceeds. This plan includes the application of all money over the interest to the furtherment of athletics at Pennsylvania.

Only one stadium in history, the Circus Maximus, which flourished in Rome, exceeds the seating capacity of the stadium planned for Philadelphia. The great Roman arena, authorities say, seated nearly 300,000 persons, some going so far as to place the figure at more than 400,000. The new Penn stadium would have room to seat comfortably 100,000, with provision for increasing this capacity.

Engineer Feeds Doe.

Pendleton, Ore., Jan. 18.—(Special) A little doe owes its life to a kind railroad engineer. George Hillman, a railroad engineer who runs over the Blue mountains, recently discovered a doe half way between Meacham and Kamela. The snow is so deep that the animal can make no progress and is making its home near the track. Mr. Hillman is taking food to it daily.

The deep snow has driven many animals out of the mountains. Several bands of elk have wandered into the midst of civilization. Mr. Hillman reports seeing a lynx last week three miles from Meacham.

Singer Sewing Machines.

New and second hand machines sold on easy terms. No interest. Repair work a specialty on all machines. Chas. M. Shapland, agent, Foley Hotel Bldg. Phone Red 451. 1-17lf

LIVE STOCK NOTES.

Don't feed hogs from a sack; always use a pail, and be sure to rattle the pail; they will soon learn what it means.

Sell scrub sires and purchase registered ones.

A small flock of sheep will pay good returns on any farm.

Don't engage in the hog business just for the dollars and cents. If you don't like hogs raise sheep or something else.

Make the boys partners in the farm by giving them a lamb or pig.

Maintain the fertility of your soil by keeping live stock.

EXAMINE HORSES' EYES FOR POSSIBLE DEFECTS

Defective eyesight in horses is a very serious fault, and to it can be directly traced the cause of innumerable accidents, writes a correspondent of the Farm and Fireside. A blind horse is always dangerous under the saddle or in single or double harness. A horse with a defective vision that distorts ordinary objects met with on the road is even more objectionable, in some respects, to ride or drive than the horse that is totally blind. Shying in many instances is the result of poor eyesight.

The buyer or owner who is apprehensive regarding a horse's eyes or eye may satisfy himself whether or not disease exists by following the directions here given for the examination of the eye: With the thumb and forefinger gently part the eyelids, thus exposing to view the eye and the mucous membrane lining the lids. The right hand should be used in manipulating the lids of the left eye and the left hand for the right eye, the finger in each case being pressed on the upper lid.

Many forms of pronounced eye disease can be discovered in ordinary light, but where it is necessary to ex-

There is profit in raising sables if the right kind are raised. The right kind of mule is the one in which size and quality are combined. Too often the fact is overlooked that it takes a good mare to raise a good mule. It is just as unprofitable to raise an inferior mule as it is to raise an inferior horse. The mule here pictured was a prize winner the past fall.

amine the interior of the eye for incipient disease or slight defects a more careful examination is necessary.

The interior of the eye cannot be satisfactorily examined in the sunshine or under a clear sky. Grave defects can be seen under such circumstances, but for careful examination of the eyes the horse should be taken where all light from above is shut off where it falls on the eye from the front and side. The examiner standing in front will see the reflective rays from the cornea, the front of the lens and the back and can detect any cloudiness, opacity or lack

Thrift Day

Second Annual Observance

Saturday, February 3

Again the thought of the nation turns to Thrift. Throughout the country attention is being given to making prosperity permanent. Everywhere conservation is uppermost in the thoughts of progressive people.

Our Officers extend a cordial invitation to observe the day by opening a Bank Account or increasing the one already established.

Register additional Thrift through this Institution.

The United States National Bank La Grande, Oregon.

MARKET NEWS

Sugar—Cane or fruit, \$7.85 sack, cash; \$8.25 30 days' time.

Fruit.

- Cranberries, 20c quart.
- Bananas—35c and 40c dozen.
- Oranges—20@60c dozen.
- Lemons—40c.

Vegetables, Miscellaneous.

- Brussel Sprouts—20c.
- Celery (California)—15c, 2 for 25c.

USE A FAN TO KEEP WARM!

Sounds Odd Doesn't It?

TRY THIS EXPERIMENT

Stand on a chair or stool in a room that is comfortably heated and notice how much warmer it is nearer the ceiling.

NOW if you could get some of that warm air down from the ceiling and distribute it around the lower part of the room you would have a warmer room and at the same time **SAVE FUEL.**

AN ELECTRIC FAN WILL DO THIS FOR YOU
