

Beef and Iron

An Ideal Warm Weather Tonic

This is a valuable remedy for anyone who is debilitated, but we recommend it especially for pale, nervous women and children who lack color and muscular energy. Our Beef and Iron Tonic is made in our own laboratory from a superior quality of Grape Juice and pure Citrate of Iron flavored with the juice of fresh oranges, and each tablespoonful contains the equivalent of one ounce of choice beef, combined to give the greatest efficiency with palatability and ready absorption. It supplies iron for the blood, fibrine and albumen for the nerves and muscles and it is a harmless stimulant to aid digestion.

Supreme Court Makes Liquor Decision

Salem, July 10.—(United Press)—The Supreme court held in affirming the conviction of Julius Wilbur, the ex-proprietor of the notorious Friars club that it was unnecessary for the state to name persons buying liquor in an indictment under the bone dry prohibition law.

The court found the employer responsible for the sale of liquor by agent though the sale was made without the consent of employer.

HONOR GUARD COMMITTEES APPOINTED

At a meeting of the Honor Guard last night all plans were completed for the Carnival which is to be given July 19-20. A number of special committees were appointed to look after the different features of the Carnival. All committee members expect to meet tonight to work out their part of the feature program.

Manufacturing Plant To Start Business Soon

A new business is to be added to the city in the form of a manufacturing plant. The factory will manufacture household and domestic articles such as washing powder and powder metal polish. Later on the company expects to manufacture scouring soap shoe and stove polishes, and also will do gold and silver electric plating. The company further expects to manufacture screen doors and small articles in the wooden ware line.

Ben Jones, who is at present an employee of the Doyle Cafe, received a patent last week on a household glove which he has been working on for some time. This article will be one of the main products of the plant. The glove can be used for washing dishes, as a polishing cloth for furniture, woodwork, and the stove, as an iron holder, and as a bath glove. Mr. Jones has a number of inventions which he will manufacture in the new plant, providing he can get a patent on the articles.

Dr. Loretta Starba will leave Thursday morning to make her home in Pendleton. Her husband has the night yard at Reith. They have sold their home and an acre of ground to Paul Knautz.

WOMEN HELP IN SHIP-BUILDING

THEIR OUTPUT IN SCOTLAND GREATER THAN THAT OF MEN BEFORE WAR

BY LOWELL MELLETT
(United Press Staff Correspondent)
Glasgow, June 10.—(By Mail)—A day on the river Clyde helps explain Lloyd George's confidence, that the submarine menace will be beaten. A snare-drum roar from thousands of steam riveters and a battlefield drumfire of crashing hydraulic hammers; unending miles of wooden and steel scaffolding with workmen swarming over them like flies; towering cranes that look capable of lifting a county courthouse and setting it down in the next county; these are some of the reasons.

Girls—thousands and thousands of trouserette girls—furnish so many additional reasons. And then there are certain reasons visible to the eye concerning which secrecy is imposed. They constitute a method of direct warfare against submarines and are already proving their effectiveness, but more than that cannot be told. The Clyde was the greatest ship-building center in the world before the war began. Now it dwarfs its own activities of three years ago. For 22 miles on one side of the river, immense plants crowd against one another; the same is true for half the distance on the other side of the river. Soon it will be the whole distance on both sides.

The world's biggest fighting craft went down the ways here a few days ago, but work stopped many months ago on what was to be the world's biggest merchant ship. Instead smaller ships and more of them are being built. Rows on rows of skeletons, some bare, some partly dressed in their armorplate show how the new policy of building standardized ships is being carried out. Builders report it means a 40 per cent gain in speed of construction.

"Unless the destructiveness of the German submarine is greatly increased, the extension of British shipping will practically take care of the situation by autumn," says Fred Lobnitz, munitions director for Scotland. "This does not take into consideration the huge preparations under way in America."

More than one shipbuilder along the river displayed a keen perception of the probable acceleration of America's output. The fact that they are compelled to rely on women and girls for an immense proportion of their

labor has ceased to be considered a handicap, the shipbuilders say. Aside from such work as calls for sheer muscle, they declared, the women are completely qualified as proved by the fact that they are averaging a larger output per person than men in the same work averaged—before the war. The same increase in output since the war began, of course has been shown by the men.

Women are used chiefly in work where automatic devices take the heavy lifting off their hands. Thus, feminine hands are seen turning out 15-inch shells practically without masculine assistance, doing the bulk of the work on the famous British tanks, gun carriages and, naturally, on aeroplanes and airships. The very excellence of their workmanship makes certain the problem of adjusting labor conditions after the war will be a big one.

"Just now they are giving thought to one thing only," said Lobnitz, "and that is the winning of the war."
