

Corselets Are Quite the Fad

VERY stunning effects are obtained by use of two tones of tussore. Here we have tan and flag blue combined, the dark tone being used to strap the fetching corselet and the side panels of the skirt. The flat neck is also thrice banded in graduated widths.

Smart sports coats, untrimmed, are made of Italian green, old blue, white

or yellow serge moultonne or peau de chameau. They are ample in form, with generous collars, cuffs and pockets, after the fashion of sports coats. On one of these coats, in yellow, is a fitted removable muffler collar of yellow tissue, which may be replaced at will by one of dull blue or black, in which case a blue or a black hat is worn with it.

ANNA MAY.

Two Men and a Problem.
When Lord Rayleigh, the British scientist, was a student at Cambridge the examiners set among other problems one which they based on an article in a German mathematical periodical supposed unlikely to have penetrated to Cambridge. Only two men solved it—Mr. Strutt (Lord Rayleigh) and another. The examiners asked the other man about this problem. "Oh," he said, "I take the — (mentioning the name of the periodical), and I was very glad to find that, thanks to an article in the last number, that problem came out quite easily." When Mr. Strutt's turn came they expected a similar answer, but he astonished them by replying, "The fact is, gentlemen, that I sometimes contribute to —, and I could not help feeling greatly flattered that you should have thought my little problem worthy of a place in this examination." He was awarded the prize.

The Scale on a Map.
Distance on a map is measured by its "scale." By laying a rule on a government map and ascertaining the number of inches between two points the number of miles between them can readily be calculated. Nearly all maps are drawn to a scale representing one, two, three or more miles to the inch, as the inch is the common unit of measurement in the United States by which the eye is accustomed to judge distances on paper.
A scale of 1:62,500, used in the well known United States geological survey topographical maps, denotes that one inch on the map represents 62,500 inches on the ground, which is the approximate number of inches in a mile. Therefore the scale is, almost exactly, one inch to one mile. A scale of 1:125,000 is approximately two miles to one inch, and a scale of 1:1,000,000 represents sixteen miles to one inch.

When Time Hung Heavy.
Today, when there is such a premium on time, one finds it hard to realize the condition portrayed by William Wistar Comfort in the Bookman:
"In its day and for two or three centuries later 'The Romance of the Rose' was the most popular work composed in medieval Europe. It consists of about 23,000 eight-syllable verses in the old French original. That forms a very considerable poem. A poem in two volumes would be sufficient in our day to rebuff most readers. But think of copying out in longhand such a poem!
"Time was something to be killed by our ancestors, and hands were found to copy this endless poem almost 200 times. That is to say, we have nearly 200 French manuscripts of the 'Roman de la Rose,' and that does not account for all those that must have been lost in the course of 600 years. However, the figures give us some idea of what medieval literary popularity was."

He Might Object.
A physician says, "Girls in feeble health should take a tramp through the woods or fields every day."
But suppose a tramp should object to being taken through the woods or fields every day by girls in feeble health? There are two sides to this argument—Boston Transcript.

GOVERNOR FERGUSON.

Indicted, He Says He's Candidate For Third Term.

Photo by American Press Association.

Although he faces nine indictments for alleged misappropriation, James E. Ferguson, governor of Texas, says he is the victim of a conspiracy on the part of his political enemies and that he is a candidate for a third term.

Hurt His Professional Pride.
"I can't graft trees no longer for \$3 a day," asserted the reformed crook who had applied for something to do on the farm.
"Three dollars a day is fair pay for working."
"But poor returns for grafting. Try me at something else."—Kansas City Journal.

The Haunted House.
Would Be Tenant—I like the house very much, but I hear that it is haunted. Landlord (rubbing his hands and smiling)—My dear madam, I attend to that personally. The ghosts only appear to tenants who do not pay their rent and refuse to move out.—London Telegraph.

Solomon's Orchestra.
It is asserted by some music historians that the greatest orchestra the world has ever known was supported by Solomon in his temple. According to Josephus, there were 20,000 harps and psalteries of solid copper and 20,000 trumpets of silver.

Cleza.
She—I suppose you saw some close things at the front? He—Rather! There was McDougall of our battalion—I think he was the closest.—London Ideas.

Subject For Pity.
Belle—She says her face is her fortune. Beulah—Well, I pity the person she wills it to.—Yonkers Statesman.

PACKING AND STORING DRIED FRUITS AND VEGETABLES
(By George Martin, United Press Staff Correspondent)
Washington, Aug. 17.—Now we come to the packing and storing of the fruits and vegetables you have dried. Although not necessary, tin cans or glass jars make good receptacles for storing dried products. Pasteboard boxes with tight covers stout paper bags, and patented paraffin paper cartons also afford ample protection for dried fruits and things, when protected from insects and rodents.
The products must be protected from the outside moisture and will keep best in a cool, dry, well-ventilated place. In humid regions air tight containers should be used.
If you pack just enough for a meal in each container, it will not be necessary to open a container the contents of which cannot be consumed in a short time.
If a paper bag is used the upper part should be twisted into a neck, bent over and tied tightly with twine. You might also paint it with a brush dipped in melted paraffin. You might take an added precaution by putting the bags in a tin container with a tight fitting cover, such as lard can or pail. Label all bags to show what they contain.
If fruits or vegetables are packed in tight containers immediately upon being thoroughly dried they will remain just as brittle as when taken from the drier. If not dried thoroughly they will soon mold. To prevent this the material should be examined within 24 hours after packing and if it appears moist it must be dried further.

COOL MOUNTAINS BECKON ALLURINGLY TO ALL WHEN THE MERCURY BEGINS TO BURN.

BANFF-WINDERMERE MOTOR ROAD IN CANADIAN PACIFIC ROCKIES

When Old Sol gets to work in deadly earnest; when the mercury mounts steadily; when the pavements radiate shimmering heat waves; when everything about life in the city seems to spell heat and discomfort—then those who are fortunate enough to possess the wherewithal to travel, begin to cast about for a refuge to which they may fly from summer's heat.
Ocean travel—except to the Orient—is practically out of the question, so the refuge must be found in America. Guide books and time tables are gathered and scanned. What place is there still unexplored that offers attractions? Canada? A delve into the attractive booklets that are issued by the railways brings to notice the magic names of Banff, Lake Louise, Yoho Valley, and memory recalls the wonderful Burton Holmes pictures of these beautiful spots that were enjoyed last winter, as well as the enthusiastic praise of this and that friend who has visited the Canadian Pacific Rockies.

The climate of the Canadian Rockies is all that could be desired in the way of coolness, yet dry and invigorating. Modern hotels are scattered at convenient places throughout the mountains, so one need not travel too far afield from the hotel to see all the wonders that a bountiful nature has spread for the edification and education of those who come to read her story of the Tumult of Ages.

WE HAVE ALWAYS PLENTY OF WATERMELONS ON ICE
PRICE FROM 35c TO 60c EACH

Peaches according to quality—70c to \$1.45 Box
