

THE NEED OF Nerve Force

The power that directs every bodily organ is generated in the brain and the nerves like the feed wires from an electric power station, distributes it.

Without this power you would not be able to move a hand or foot.

You can, therefore, readily see why it's so necessary to keep the brain and nerves strong and healthy.

OUR NUX AND IRON COMPOUND

is a preparation that feeds the nerves and keeps them in a condition to withstand the exertion that modern life demands.

COMMERCIAL CON- QUEST NEXT PROGRAM

Dollars Replace Centime in Scramble for Trade With Germany

LONDON, (Correspondence of the Associated Press)—American and British foreign trade interests have resumed their accustomed pre-war code and the competition for the commercial conquest of Germany and other recently enemy countries is well under way.

This is said by representatives here of both American and British trade bodies. The London head of one American business men's organization said:

"The business man reasons it out this way: 'Eventually—perhaps in a year from now—we shall have resumed normal trade relations with those nations which were, until a few months ago, our enemies. Why not get busy now—if I don't, someone else will.' So sentimental considerations are eliminated. The dollar and the pound once more are what business is seeking."

A sharpness of competition unapproached in pre-war days will characterize the conduct of foreign trade activities during the next few years, it is generally conceded. America's possession of raw materials, her facilities for quantity productions and

the fact that her industrial machinery is not so clogged with strikes and other labor disturbances which are so seriously impairing British trade, it is thought, ensures the United States a fair proportion of this business.

But it is pointed out that a volunuous foreign trade will be essentially a "new game" and British traders feel that lack of experience will offset, in a measure, the advantages indicated which now favor American trade bidders.

OUTDOOR SCHOOLS HELD IN ROME

ROME, (Correspondence of the Associated Press)—School children of Rome are allowed to attend school outdoors in the great public park of the Villa Borghese in summer. Teachers this summer detailed a number of the children to patrol the boundaries of the out-door school and capture the stragglers.

DISCAP IN LOSS OF EYE

Said to Depend Largely on Time of Life at Which the Accident Occurred.

What actual disability is involved in the loss of one eye? An expert insurance company usually estimates it at 25 per cent, but Sir Arthur Pearson told the British committee on the administration of soldiers' and sailors' pensions that this was absolutely absurd, and suggested 25 per cent as a more reasonable estimate.

It depends largely upon the time of life at which the eye is lost. By binocular vision, says the Lancet, we have two slightly dissimilar images of an object, which are focused upon the two retinas, and this enables us to estimate correctly the relative position or distance of objects. This power, however, is not confined to those of us who possess two good eyes. The man who has been blind in

CELEBRATING THE WATT CENTENARY

LONDON, (Correspondence of the Associated Press)—The garret in which the engineering genius James Watt perfected his mechanical studies is to be removed intact if possible from its position on the top of Heathfield Hall at Handsworth where Watt spent his last years and re-erected in the central municipal buildings to be opened in Birmingham where the Watt centenary celebration is to be held September 16-18.

When Watt died the garret was locked up and remained unopened for about fifty years and even now it is still in exactly the same condition as when Watt worked in it.

The piece of iron Watt was last engaged in turning lies on the lathe. The ashes of his last fire where Watt used to do his own cooking because of his wife's objection to seeing her husband "looking like a blacksmith" are still in the grate; the last lump of coal is in the scuttle. The Dutch oven is in its place over the stove and the frying pan in which he cooked his meal is hanging on its accustomed nail.

Tattoo Removal.

Various methods for removing tattooing are employed, the best of which consists in going over the tattoo marks with a strong solution of tannin, using the tattooing needle, then rubbing with silver nitrate crayon. Nitric acid, salicylic acid and glycerine, chloroform and a mixture of peppin, glycerine, hydrochloric acid and water are other substances used for this purpose.
