"BOBBY" McLEAN

PROFESSIONAL SPEED SKATING CHAMPION OF THE UNITED STATES WHO IS DOING TIME IN VAUDEVILLE BECAUSE HE CAN NOT GET RACES.

By Peter P. Carney, Editor National Sports Syndicate.

"Bobby" McLean is doing an act for another match. Thus far he has skating act in vaudeville this winter, been unsuccessful. McLean informed because he could find no one to skate the other day that if Mathieson did in the open. McLean lost the world's speed championship last fall he intended going to Norplonship ice skating title to Oscar away and remaining there until he Mathieson in Norway last February, raced Mathieson. He expects to re-und from the time the Norwegian put turn with the world's title once more over the victory, the Chicago skater affixed to his name. McLean means has been trying to make arrangements just what he says.

In the meantime McLean is anxious to skate a race or two, before the ice melts, with Everett McGowan, Norval Baptie, Art Staff, or any of the others who think they can defeat him. Some skaters take a delight in challenging McLean to a race, when as a matter of fact it would be impossible to get them on the same skating rink as the Chicago wonder.

To Car Owners

THE SAFE WAY

is to have your car examined or overhauled before beginning its regular spring and summer use.

Cars get more or less out of order during the severe winter weather, and do not work as perfectly as they should. This means additional wear and strains on the parts effected, and increased expense to you if allowed to continue in that condition. Failure to correct these defects has caused the wrecking of many cars. Don't let it occur to yours.

We can overhaul your car at slight expense.

It Makes Every Forkful of Manure Count for a Bigger Yield

Ask any user of the John Deere Spreader and he will tell you it is the best machinery investment he ever made—not only because it saves hard work and valuable time, but because it makes every forkful of manure count for a bigger crop yield.

Manure goes farther and does more good when you use a John Deere Spreader. You can spread manure evenly, heavy or light—no under-fertilized or over-fertilized spots.

Come in and see this better spreader. Here are a few things about its operating advantages we want to show you.

You get a low down spreader with high drive wheels. It is easy to load from the front to the rear and because of the high drive wheels and roller

bearings it is light draft—a most valuable combination.

No clutches—no chains—few adjustments to cause trouble—and it is extremely simple—only about half the parts that are necessary on the ordinary spreader.

The main working parts are mounted on the rear axle, where they cannot get out of line to cause binding, heavy draft and breakage.

The beater drive is much like the simple triple geared horse-power. The gears are enclosed and run in an oil bath.

There are so many other good features about this spreader that we want you to see it. You will quickly see why there are so many satisfied users of John Deere Spreaders.
