A STORE FOR MEN

OF INTEREST STOCKMEN

It is not uncommon for a mare to die shortly after foaling, thus leaving her foal dependent on artificial feeding for its sustenance; and some mares furnish an insufficient amount of milk for their colts. A cow's milk furnishes a most logical substitute for mare's milk, but as the composition is somewhat different, certain changes of modifications are necessary in order that the supplied diet be not too dissimilar from the natural. The following table of percentage gives the average composition of the two kinds of milk:

	Water	Protein	Fat	Sugar	Ash
Cow's milk	87.37	2.55	2.49	4.88	0.71
Mare's milk	90.73	1.99	1.24	4.88	0.31

Milk from a fresh a-cow as possible and which is not rich in butterfat should be diluted about one-fourth with fresh water. A table-

Patience, Perseverance and Judgment Are Necessary in Raising Orphan Foal.

spoonful of sugar and about 3 table-spoonfuls of lime water should be added for each pint. This mixture should be supplied to the colt at about body temperature. A bottle with a rubber nipple, or even a finger of a kid glove with a fair-sized hole in it fitted over the end of a spout of a vessel such as a teapot, will serve as a convenient utensil in getting the foal to take the milk. If the finger of a kid glove is used it should be as clean as possible. At first about one-half a cup of milk should be given every hour the quantity to be increased slightly and the intervals to be lengthened gradually as the foal grows older. In about 2 months skimmed milk may be substituted for whole milk, and in addition one of the following rations should be fed: One part of flaxseed meal boiled in a jelly, and 2 or 3 parts of bran. Or 2 parts ground oats, 1 part corn meal, one half-part flaxseed meal. Or 2 parts of bran, 2 parts corn meal, and 1 part oil meal. Feed a double handful a day to start with, and increase the amount gradually.

Raising a foal by hand is not a job for the careless and indifferent. It requires patience, painstaking care, perseverance, judgment, and cleanliness. The vessel in which the milk is supplied should be scalded thoroughly each time it is used. Unclean receptacles for the milk and irregular intervals for feeding likely will cause scours. The quarters should be very clean and the orphaned foal should have company of some kind. Another foal is desirable, but even a calf is better than no company. A grassy paddock with abundant shade, fresh water and protection from flies will increase the orphan's chance of proper development.

GOOD REMEDY FOR SWEENEY

Afflicted Horse Should Not Be Worked If It Can Be Avoided—Complete Rest Is Best.

A horse with sweeny should not be worked if it can be avoided. If the animal is used at all it should be at only light work. The collar should not be properly. A cure can be brought about much more quickly if the animal is given complete rest, preferably in a pasture, for a couple of months.

BLAME GOITER FOR AILMENT

Experiments in Wisconsin and Montana Determine on It for Cause of "Hairless Pig."

Goiter has been determined as the cause of the trouble known as the "hairless pig," according to investigations made recently at the University of Wisconsin and the Montana experiment station.

PREVENTIVE MEASURES BEST

Successful Farmer Always Tries to Avoid Various Ailments Rather Than Try to Cure.

The successful farmer always practices prevention of disease in his stock rather than trying to cure. In the former case, the chances for curing remain after preventive measures have failed.

High Class Candies.

The high class of chocolates and taffies we are selling will please the most fastidious customers. The prices we are charging for candy are most reasonable. Please drop in and let us show you.
