## THE HOME GARDEN

What is Home without a Garden?

### Some Stunts With Turnips

Young turnips are much improved in flavor by adding a little sugar to the water in which they are cooked. Here is a palatable dish cooked by some of our foreign population who use turnips much more than we do. Beef or other good soup stock is used in this recipe and at least a pint will be necessary and more if it is available can be used.

Slice six medium sized turnips, an onion, and a leek if available, if not, two onions. Place in a covered saucepan with a tablespoon of butter, season with salt and pepper, and add enough stock just to cover and cook the vegetables. Set the dish in the oven for 45 minutes or cook on top of the stove, slowly in each case. When the turnips are tender, thicken with the yolk of an egg and add a tablespoonful of grated cheese, stirring thoroughly. Parmesan is best, but grated Swiss cheese or even American will answer, although the last is a little strong for the purpose.

Have the stock hot and slices of toast prepared. Spread the vegetables upon the toast and set in the oven for a few moments, then place in a soup tureen or in individual soup plates and pour over the consommé.

Raw turnips, particularly the white varieties, are tempting but there is an ancient theory without good grounds that they produce colic. They may be used raw in salad and to avoid any danger of the aforesaid stomach ache, they are sliced thin and put to soak overnight in cold water. Change the water next morning, chop fine and mix either with chopped celery or celery seed serve with French dressing on lettuce.

Some Stunts With Turnips.

The turnip, properly approached, is convertible into many tempting dishes and even though not used alone it enters importantly into the manufacture of many others. Too often it is seen merely in cold soups or wetly mashed and even then it is an admirable vegetable. Being so useful not only for itself alone but as a part of soup stocks, stews, boiled dinners and other culinary output, it is a popular garden vegetable and is one of the most easily grown.

It can be sown for an early crop but its most popular use is as a follow crop to peas. Orangeburg's Day, according to tradition is the proper day for sowing as the ancient couplet runs:

The Twelfth of July,  
Wet or dry,  
Other couples put it the 25th of July,  
which is a better date in the central states as the peas are barely ready to be removed by July 12 except the very early crop. As this is for the late crop for table use and storage it will need more room than the early crop for young turnips.

Turnips became all too important an article of diet among those members of the A. E. F. who were unfortunate enough to fall into German hands and were forced to live on German prison fare where they

Turnip soup was an ever present dish and without variety. There isn't a great amount of nourishment in a turnip but it is a useful diet variant, nothing to be used for steady consumption.

It is very hardy, but strange if it may seem, the leaves are harder than the root and they will survive when freezing destroys the turnip part of the plant. Turnips will grow almost anywhere but if the soil is poor and not well cultivated they are likely to be strong, pitiful and stringy. Like most root crops they need to make a fast growth to make a tender growth and require extra care in giving them rich, well tilled soil.

Seed for the late turnip crop is generally broadcast but it is much better to sow it in orderly rows both for the early and late crop. Sow the seed in drills about half an inch deep in the late plantings and shallower for the early. Thin the plants to three inches apart and pull out the alternate plants for the earliest crop, leaving the others to develop. The rows may be ten inches apart, so the turnip is an accommodating vegetable for the small garden.

These remarks are in reference to the true turnip, the flat topped variety with white flesh. Another form is the rutabaga or yellow turnip which is of larger growth and needs a great deal more room and is grown only for a late crop.

Many people prefer the rutabaga for cooking in winter to the white varieties as it seems to have better keeping qualities, firmer flesh, and milder flavor when boiled, mashed or sliced for stews or soups. The rutabagas need to be planted in rows at least a foot apart, preferably 18 inches, and at least a foot apart in the row if big roots are to be raised to go into the winter cellar. The flavor is much the same in both.

The turnip is a biennial in cultivation, that is, it makes its growth of root and leaves one year and springs up to blossom and seeds the second and then dies. Left to run wild, the turnip loses its fleshy root and becomes an annual much resembling mustard. It is a native of Eastern Europe and Western Asia and has been cultivated for centuries.
