Swimming Teacher Tells Of Accident Prevention

"Accidents by drowning are largely preventable and in order to lessen the chance of lives being lost through drowning this summer I will teach any person in La Grande to swim or save life without any charge this summer," A. Edwin Pryke, physical director of the Y. M. C. A., announced today in discussing the tragedy of Tuesday evening in which a seventeen-year-old boy lost his life. "Many boys have already signified their intention of taking lessons this summer and arrangements will be made to teach all of these as well as any other groups that may apply. Regardless of whether they are members of the Y. M. C. A. or not will be taught to swim as it is the desire of the Y. M. C. A. to do whatever is possible to prevent further tragedies. Mr. Pryke, who is an experienced teacher of swimming asks that all who want to take advantage of the Y. M. C. A.'s offer to teach them to swim get into immediate touch with him. In discussing safety first measures which swimmers should observe he said: "I remember two accidents last year in which lives were lost, one where a man jumped into the water to save another man and after swimming about ten feet from the float on which he was, became fatigued and went down, and another of a girl who went into the water fifteen or twenty minutes after eating. She suffered from an attack of cramps and went down."

Cold Water Dangers
"Especially in cold waters such as we have in this part of the country swimmers and bathers should be cautious about observing the safety rules. Never go into the water while in a sweat. Always let an hour and a half or two hours elapse after a meal before going into the water. These two precautions are very necessary in cold water streams, and lakes, perhaps in warm water sections they can be modified somewhat without taking undue risks, but the waters of this western country are cold enough at all times of the year to make their observance a necessary precaution. "Before jumping or diving into the water it is always good to dash some water over the forehead and front of the body, if possible, take a warm shower gradually cooling the water down to the temperature of the water. Always wait until perspiration stops before taking the shower or dashing the water over one's head and body. It is always a safe plan to immerse quickly, either diving or jumping into the water, preferably where it is fairly shallow. If the water is fairly shallow it is easy to reach a safe place in case the shock is too great. "Danger Lessened
"Once the body is accustomed to the temperature of the water there need be little fear of being overcome by exhaustion or cramps, provided the preliminary rules are adhered to. One thing I want to warn all about is never to call for help under any circumstances when help is not needed. Any man or boy calling for help for fun ought to be whipped, in my opinion. Many people drown each year because they do not share their calls for help in time. "Should anyone be overcome by cramps the best advice, although it sometimes seems hard to take, is to get to become excited. In such situations life depends entirely upon one keeping a level head. Cramps in the lower leg often be overcome by stretching the affected limb. "Cramps all over the body are met with only in rare cases. Usually only a part of the body is affected. Stomach cramps are the most serious as a rule because the body is tired, tired up. In most cases where one is affected in this manner a strong effort should be made to straighten out the body and if possible the muscles should be stretched with the hands. Nearly everyone can keep afloat long enough for help to arrive, even when suffering from cramps in the stomach, by turning over on the back and arching the body from the heels and stretching the arms out, rolling the arms backward with the palms of the hands up."

Falling in the Water
"Falling in the water with one's clothes on is another accident Mr. Pryke believes should not occur very often in many cases. It is a very simple matter to remove sufficient clothes in the water so as to be able to reach shore or remove all one's clothes, where a long swim is ahead. He called special attention to the case of women's dresses. The ordinary dress a woman wears holds so much air that material and it gives in keeping her afloat if she will keep her head. "Under no circumstances should one throw his arms about or beat the air or kick the water," he said. "It will not help in the least and causes exhaustion and loss of the mental equilibrium that is so necessary to save one's life. "Send For Duvet
"When a person is apparently drowned one of the first things to do is to summon a doctor and then make first aid. The Shaffer method of resuscitation is one of the simplest and most effective. The body should be turned over on its back and the head turned so that it faces upwards. Upon the mouth to see there is no mud or dirt in it and to see that the tongue is not sticking in the throat causing the air passages. "Next place the hands with thumbs parallel to the backbone and about two inches from the backbone. Press down with the palm of the hand on the last rib and the fingers outspread. Press down just enough to push the air out of the lungs and let up quickly. Do this fourteen to eighteen times per minute and keep it up until signs of natural breathing return. "When signs of natural breathing return the resuscitator should accompany the victim of breathing with the hands to help the breathing until respiration has been established. "This method of resuscitation is the simplest of the various methods in general use and is rapidly gaining popularity among life-savers. Pryke stated, it is possible for a boy to revive a heavy man by using this method and it is also an easy method to learn."

Save Labor During The Busy Haying Season

Much labor is wasted in harvesting hay, not necessarily because of ill-effects, but because of wrong methods, inefficient management, and improper or imperfect implements are employed, say specialists of the United States Department of Agriculture. On farms where considerable hay is grown, they say, methods must be adopted by which the greater part of the heavy labor is done by horses. This will necessitate the general use of certain types of labor-saving machinery, some of them not so common in the East, which have been thoroughly tested and proved satisfactory in the western part of the United States. The small hay grower, however, need not make a very heavy investment in new haying apparatus, for by rearranging the working of his crew, and using a little more horse labor for the hard work, he can add considerably to the efficiency of his crew. "Time of Day is Important.
The time of day when the mowing is started has a direct bearing on the amount of hay made per day and the number of men required. This is especially true on farms where it is the custom to haul or stack hay in the afternoon only. If mowing is done in the morning and raking in the afternoon, more men and horses than usual will be required, and if mowing and raking are both done in the afternoon, still more men and horses will be needed. The 5-foot cut is the most common size used in the East, but it will be economy to use larger mowers; 6-, 7-, and even 8-foot sizes can be used on a great many farms. Some idea of the time saved by using these larger sizes may be had when the difference in the amount of work done by each is known. Under average conditions, a 5-foot mower will cut 10 acres in 10 hours, a 6-foot mower will cut 12 acres, a 7-foot 14 acres, and an 8-foot about 16 acres in 10 hours. It should be borne in mind that more power is required for the wider cuts. Many alfalfa growers are using the 8 foot cut with good success, and make a practice of mowing early in the morning before the dew is off, or even during a light rain. "Use Tedder and Rake.
It does not pay to wait until the dew is off before starting the mower, if the tedder is used to "kick" the water out of the hay. The size of mower used and the time of day it is started are the most important factors in crew management. The use of the tedder and rake are next in importance, and these three implements should be kept clearly in mind when attempting to solve the problem of how to make a small crew efficient."

SPANISH VETS MEET THIS WEEK

ASTORIA, July 14.—Fully 500 delegates, men and women, are expected to come to Astoria for the state encampment of the United Spanish War Veterans which will be opened here Friday morning, July 16, for a two-day session. Governor Orford, Mayor George Baker, of Portland, Adjutant-General George White and other prominent people have stated that they will be here during the convention, probably for the banquet on Friday evening.

THE COUNTY FAIR IS AN ATTRACTION AT ARCADE THEATRE

Do not miss Maurice Tourneur's screen play of "The County Fair," which is on view at the Arcade now. It has all the fun and excitement of a day at the fair crowded into a tale which reaches its climax in the fourth reel. A special reel comedy featuring Al St. John is being shown on the same program.

MAY ALTON WOULD WEAR BOBBED HAIR IN FILM AT SHERRYS

"Are All Men Alike?" featuring May Alton will be the feature at the Sherry Theatre, beginning today. Briefly, the story recounts the misadventure upon the ironing table of a life known as the "Ironing Girl" and the girl who saves her from the clutches of a villainous man who has seduced her. Lightning breezes is also making friends every evening. Today is the sixth.

KELLY'S COMEDIANS WILL RETURN HERE THIS COMING WEEK

Kelly's Comedians announce they have decided to play a season on Broadway next week on their way back to Portland. The manager announces the cast is the same as when in La Grande the last time, with one exception and with an added feature, the "Chicago's favorite." The manager also announces they have new scenery, lighting effects and costumes.
