

FORD CORRECT LUBRICATION CHART

Engine—1. Daily, or every 100 miles, pour sufficient fresh Zerolene No. 3 (former designation Medium) into crankcase through filler pipe to bring level of oil to upper oil drain cock located on side of combination flywheel housing and oil reservoir. The oil level should not be allowed to rise higher than the upper oil drain cock, nor to drop lower than the lower oil drain cock.

At regular intervals, as recommended by the manufacturer, or, in the absence of such instructions, every 750 miles, the oil in the crankcase reservoir should be entirely renewed.

Rear Axle—15. Every 500 miles remove plug in rear of differential housing and put in sufficient fresh Zerolene Transmission Lubricant "BBB" to fill the housing one-third full, or approximately to height of filler plug.

Every 2000 miles the differential housing should be drained and thoroughly washed out with Pearl Oil (kerosene) and fresh lubricant placed in the housing.

Electric Generator—7. Every 250 miles apply three or four drops of Zerolene No. 3 to rear armature shaft bearings through oil cup provided for the purpose.

Commutator or Distributor—16. Daily, or every 100 miles, apply two or three drops of Standard Household Lubricant through oil cup provided for the purpose.

Front Wheel Bearings—4-22. Every 2000 miles remove front wheels and wash bearings and hubs thoroughly with Pearl Oil (kerosene). Repack hubs and bearings with fresh Zerolene Cup Grease and replace wheels.

Springs—14-19. Every 500 miles, or whenever springs squeak, clean off all dirt and old oil and apply a small quantity of Standard Household Lubricant along the edges of spring leaves.

Steering Gear—25. Every 3000 miles uncrew the cap covering the steering gear (under steering wheel) and pack housing with Zerolene Cup Grease.

Grease Cups. Daily, or every 100 miles, turn down all grease cups about two complete turns, refilling cups with fresh Zerolene Cup Grease when empty. Particular attention is directed to the two grease cups (12-28) which supply the lubricant for the rear wheel bearings, as these bearings are not lubricated by the action of the lubricant in the differential housing. Attention is also directed to grease cups on fan shaft (17) bearings at base of steering column (18) and universal joint (8).

General Lubrication. Daily, or every 100 miles, use squirt can to apply Zerolene No. 3 to all oil cups, joints and small working parts not otherwise lubricated, such as spare and throttle control connections (24), brake clevis pins (9-11-27), spring bolts (2-13-20-29), steering spindle bolts (3-21), hub brake cams (19-26), steering ball sockets (6), cross steering rod pins (5-23), etc.

Clackamas county pays \$99,053 of. Petitions have been filed for the re- the \$2,255,141 which is contributed to call of the Bandon school directors, the state in motor license fees. This dissatisfaction is expressed at the sum is exceeded only by Multnomah, change made this year in the location of the high school.

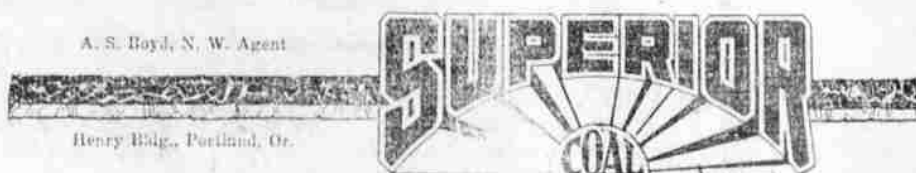

Name Your Coal

Coal may be COAL, but SUPERIOR coal is all the name implies—a quick-firing coal which burns with a long flame, low degree of ash and great heat value. It isn't the "clinking" kind.

You use discrimination in purchases of far less household importance than coal—so begin to say SUPERIOR coal to your dealer when seeking heating satisfaction. You'll get the kind of coal you want and the results you expect.

Superior Domestic Lump is the economical range of size for furnace, heater and cooker.

BREACH OF PROMISE SUIT
DRAWS LARGE CROWD

PENDLETON, Oct. 25. — Large crowds packed the circuit court room here today for the breach of promise suit brought by Mrs. Lucille Christianson against J. B. Knight, a Pendleton business man.

Mrs. Christianson, a divorcee, has asked heart claim to the amount of \$25,000. She filed her action last June. A month later Mr. Knight remarried his wife, from whom he was divorced in 1917. Mrs. Christianson formerly operated a lodging house. Mr. Knight, on the witness stand, admitted having lived at her house for more than a year.

Mr. Knight's wife sat with his attorneys today in the courtroom. At the opposite end of a long table sat the other woman in the case, who, on the stand, insisted that she was still in love with the defendant.

Many letters of an endearing nature and numerous pictures were introduced as evidence.

Several of the pictures show Mr. Knight and the woman together on picnic parties. Ripples of laughter went the rounds in the courtroom when the pictures were being introduced as evidence while Mr. Knight was on the witness stand.

Funeral services for Aubrey Jones, who was killed in action in the Argonne drive in 1918, were held in the state armory at Salem Sunday.

Water—When
and How Much

Hundreds of batteries die of thirst every year.

Not because their owners didn't know water was necessary.

Not because they didn't know the neglect was shortening battery life and costing them money.

But simply because they overlooked it—hadn't the distilled water handy or didn't know just how much to put in.

We can't do your remembering, but we can take all the rest of the job off your hands. Drive around anytime and ask us to see if your battery needs water.

Remember, a whole carton!

It pays to buy current-saving Bryan Marsh Lamps. They give three times the light of old style bulbs for the same light bills.

Buying five in a blue, convenience curtain saves breakage and gives you extra lamps to keep on hand.

Do Your Children's Eyes Need Help?

Now is the time when the child with weak eyes is experiencing the most trouble. For hours every day and often under artificial light during the evenings, they have to pore over books. The constant strain is particularly telling. Even a slight weakness of the eyes develops rapidly under such a strain into something more serious.

Such children need glasses. Properly fitted lenses will take care of the overload. If cared for now the weakness may be overcome by the time the child is full grown. If not, the time will soon come when glasses will be absolutely necessary and doubtless for life. It is only fair to the child to make an effort to save them from this if possible.

If your children are backward at school work or complain of frequent headaches or smarting and stinging sensations in the eyes, have a competent optometrist make an examination.

Glasses fitted upon such an examination will relieve them from the tremendous strain under which they are now working. It will enable them to go through the days work with the snap and vigor natural to childhood. You will note an improvement in their work. And, best of all, you are saving their eyes for the future.

Our Equipment is complete in every detail.
