TOO MUCH IDLE TIMBER LAND

Chief Forester of U. S. Points Out Necessity of Reforestation in United States.

PORTLAND, Nov. 28. — "The United States produces more than half of the entire lumber cut of the world, and uses 95 percent of that amount right here at home," said W. B. Greeley, chief of the forest service, who passed through Portland today from the forest fire conference at Mather Field, California.

"The exhaustion of our timber supply is coming about, not because we have used our forests freely, but because we failed to use our timber grower land. The problem in a nutshell is the enormous area of forest land which has been so longed and burned that it is producing little or nothing. We have more than 80,000,000 acres, an area greater than all the forests of France, Belgium, Holland, Denmark, Germany, Switzerland, Spain and Portugal, which have been denuded to the point of absolute idleness so far as the production of any timber of commercial value is concerned.

We have other enormous areas of cut-over land now growing but a fraction of the amount of timber which they might produce. And we are adding to these areas of idle or largely idle land from 10,000,000 to 15,000,000 acres every year, as destructive logging and still more destructive burning progress. In western Oregon and Washington alone it is estimated that there are 1,500,000 acres of denuded land which but for fire would be producing timber.

"This situation," the forester points out, "can not long continue without grave consequences. If we are to remain a nation of wood users, we must become a nation of wood growers. By some means or other we must see to it that forest lands not needed for agriculture are not allowed to lie idle, but are kept at work growing timber.

In 1920 Washington led all other states in lumber cut with Oregon second, these two states producing over eight and a half billion feet board measure. If the Pacific northwest is to maintain its lead in lumber production it must keep out fire and put its idle forest lands to work growing timber.

"Where Americans need more for cuts," states Mr. Greeley, "is largely on those 80,000,000 timberdenuded acres which could be made productive again with proper attention and protection against fires." Some of the chief reasons why these forests are needed are as follows:

"Our manufacturing centers are drawing at an enormous rate upon our timber supply—from two to four times as fast per capita as the country at large.

"Our railroads require 125,000,000 wooden cross-ties annually to maintain their roadbeds in fit condition and take care of new construction.

"Our average American uses 125 pounds of paper a year—made largely from wood—and the growing circulation of our newspapers and magazines is increasing that very generous per capita allowance.

"Our average well-kept farm, using the Upper Mississippi valley as an instance, require 2,000 board feet of lumber annually for repairs and improvements.

"The fruit shipments from the Wenatchee, Yakima and Hood River valleys alone, for marketing, take 25,000,000 boxes of 5 board feet each, every year."

BIG FIRE

AUGUST, Ga., Nov. 28.—A loss of two million dollars by fire in the heart of the business district was suffered here Saturday.

GOOD HEALTH.

If you would enjoy good health keep your bowels regular. No one can reasonably hope to feel well, when constipated. When needed, take Chamberlain's Tablets. They are mild and gentle.—Adv.

COW TESTING MAKES PROFIT

OREGON AGRICULTURAL COLLEGE, Corvallis, Nov. 28.—Oregon cow-testing association held a very successful meeting here Saturday.

The average yield of milk reported for the 2500 cows in cow-testing associations was 571 pounds, and the yield of butter fat 27.91 pounds. This was an average of 2.29 pounds of fat over the yield for October, 1920.

The total gain was 5920 pounds of fat, which at 15 cents a pound was worth \$888—a clear gain. This gain was made over much better than average production, being the yield of well tested cows last year. Compared with the average yield of untested cows the showing is much more impressive.

The Tillamook association led in the number of cows tested, 1010, and number of honor cows giving more than 40 pounds of fat.

The Rogue River association made the highest average production, at 51.46 pounds of fat. Twelve grade Jerseys owned by Clyde Kinsman of the Tillamook association made the highest herd average, 50.75 pounds. A. J. Roger's

Holstein, Princess, gave the most fat for the month, 84.55 pounds.

Thirteen low producers were weeded out. Good feeding and management as well as good cows are objectives of the association.

KILLED BY LIQUOR POISON

GRAND JUNCTION, Colo., Nov. 28.—Jake Brooks of Terre Haute, Ind.,

is dead and Edward Neese is critically ill as the result of drinking from a bucket of liquor found in a cabin near here while on a tramp-trip.

A feud of several years' duration reached a climax at Mitchell Wednesday night when Henry Keller, a truck driver, shot and fatally wounded Louis Toney, a rancher. The men had quarreled and fought frequently.
