

To All Users of ELECTRICITY

The Power Situation Is Serious

We have been asking you to save in your use of electricity as much as you could without inconvenience.

We now ask you to **SAVE EVERYWHERE** in **EVERY POSSIBLE WAY**.

At our present rate of consumption the water in Olive Lake will not last over 15 days more. When it is gone we cannot pull the load as it is at present. If the drain on Olive Lake cannot be greatly reduced, so as to make it last for about thirty days more, we will be unable to supply the necessary load. We should get new water within thirty days.

We have appealed to each of our large power users personally. They have responded in a wonderful way. They are cutting their requirements to their barest necessities to avoid the worst possibilities, and to help us keep your lights burning and your necessary power and heat going.

WHAT WILL YOU DO?

Save electricity now in your home, your office, your store, your shop so that all can be served with **NECESSARY** light, heat and power until this emergency is over.

This shortage of water is costing us thousands of dollars in revenues. In addition we are spending other thousands of dollars in the extra effort we are making in a score of ways to keep you served. At our steam plant alone we are spending thousands of dollars extra each month for expensive fuel to keep it going. We are losing money every day but the expense is not considered now. The **ONLY** thing we have in mind is to keep service going until new water comes.

Help Us Do This and By So Doing, Help Yourself and the Community.
