THE HOME GARDEN

CABBAGES FROM JULY TO THANKSGIVING

Young cabbage may be harvested in the garden from July until hard freezing, given a little care and planning in sowing seed and transplanting.

The selection of proper varieties has much to do with success and the best quality of early cabbage seed should be secured from a seedman of known reliability and reputation.

The cabbage needs plenty of room and the richest soil available. It needs plenty of moisture and also good drainage.

The seedlings should be transplanted as soon as they have made two true leaves; if the ground isn't ready for them transplant them into a box or frame. They will be stocky for the second transplanting.

When they are to be set into the ground, set the plants almost up to the true leaves. Long-legged cabbages seldom make good heads. It is the squat, close to the ground growers that give the solid heads and proper setting when the plants are transplanted has much to do with this feature.

The plants of early cabbage may be set out by April 15, over a large section of the country as they will stand quite a little frost without damage. The smaller growing, extra early sorts should be set two feet apart, in rows from 2 1/2 to 3 feet apart for the best results. The Wakefield types are standard early cabbages.

Nitrate of soda in spoonful quantities when the plants are set out, making the nitrate fine and not applying to too close to the plant and at from two to three weeks intervals during the growing season is a fine stimulant for firm, vigorous heads.

The cabbage worm is always present. Various insecticides will control this pest and any dealer can recommend an effective one. Those which are non-poisonous are best in the home garden. They should be applied frequently to keep down the green worms. Arsenical poisons are more effective and may be used with out fear in the early stages of growth as the poison cannot get into the head then.

Sponge Cake

Five egg yolks; 1 cup sugar; 1 cup Olympic Flour; 5 egg whites; 1/2 teaspoon cream of tartar; 1 teaspoon each lemon and vanilla. Beat the yolks of eggs until thick; add sugar gradually, beating with the egg beater; add flavoring. Beat the whites of the eggs until stiff and firm, using a whip egg beater; fold carefully into the egg yolk mixture, then gradually fold in the flour. Pour into an ungreased tube cake pan and bake in a slow oven about fifty minutes. This formula will make two dozen small cakes.
