This passage is called the autumn equinox and from now on, with the exception of today, the hours of daylight will be shorter and the hours of darkness longer. Today the darkness and light should be equal. On its journey south the sun will bring summer weather to the southern hemisphere, while the northern half will prepare for the season of winter.

A little, however, little change will be noted, but by the end of this month the sun will begin to set earlier and rise later. Weather prophets around here are anticipating a long, severe winter with only a fair amount of snow. How true their prophecies are will be determined, of course, only by the arrival of winter itself.

Mr. Miller's fur business is a decided asset to La Grande as a community, also, in that it brings many people from outside points to this city, some coming from as far east as St. Louis in person to buy.
