

STAR ENGINE GIVEN PRAISE

Making power, as well as economical operation, among the dominating features of the new 1925 Star cars, the "million dollar motor," one of the latest developments in automotive engineering and proven by successful tests to be a still greater advancement for the new Star cars, is announced by the Durant Motor company of California.

The new power plant is said to place the 1925 Star cars among the leaders in four-cylinder motor manufacturing today. According to factory engineers, the unimpaired will have a hard time distinguishing its operation from that of a multi-cylinder power plant, because of the many refinements that have been made to greatly increase the power.

Brought about by gradual development rather than any sudden change in manufacturing, the motor has been tested in thousands of miles of actual operation, will win even higher favor for Star cars among light car owners, it was said today by J. P. Morelock, local dealer who is featuring a display of the new cars.

That the power of the new motor will be forcibly brought before the motoring public during the next few months, factory engineers are devising tests that will be held by them and by dealers all over the western territory. Several informal tests, under the supervision of newspapermen in Oakland, California, have revealed the "million dollar motor" as having remarkable qualities for power and acceleration built into it.

In one of these tests, actual timing of acceleration showed a pickup of from 5 to 25 miles per hour, in second gear, in four seconds, a record that is believed never before been equaled by a light four-cylinder motor.

New low prices are announced simultaneously by the factory, affecting all models of the 1925 Star motor cars.

All models are equipped with four-wheel brakes, of the locomotive type, which have already proven successful on thousands of Durant produced cars. Balloon tires are standard equipment on some models, and optional on others.

The need of four-wheel brake equipment is becoming more and more evident in the light car field, according to Mr. Morelock.
