HEALTH

EPIDEMIC MENINGITIS.
(By Dr. Frederick Stecker)

As a number of cases of meningitis have been reported in Oregon it is important that everyone should be informed in regard to measures for its prevention and control.

Two epidemics have been reported, one at Cochrane and the other at Klamath Falls. Epidemic meningitis was not recognized until the beginning of the nineteenth century. The first outbreak occurred in 1804 in New England states and Kentucky. Cerebrospinal fever occurs in epidemic and in sporadic form. The epidemics are localized and are rarely widespread. As a rule the country districts are more affected than cities. A concentration of individuals in large schools or barracks seems to be a factor. Children and young adults are most susceptible. Exhaustion, over exertion, depressing mental and bodily surroundings are predisposing causes. Meningitis carries play an important role in transmitting the disease. The scientific name for epidemic meningitis is cerebrospinal fever.

"It" means inflammation. An-

pendicitis means inflammation of the appendix. Cerebrospinal meningitis means inflammation of the nerve tissue of the brain and spinal cord. In its common usage inflammation anywhere means the effects of infection. Cerebrospinal meningitis means that some infecting organism is attacking the brain and spinal cord. It has been found out that there are many different microbes which do this, but a special one, the meningococcus, is accused of causing epidemics of contagious meningitis.

Epidemic meningitis is transmitted directly by the transfer of secretions from the nose and throat

by means of coughing or sneezing, and indirectly by coming in contact with articles which have been contaminated by such secretions. The time between exposure and the first appearance of symptoms is from two to ten days, but persons have been known to carry these germs in the nose and throat for months before symptoms develop.

An oyster can lay 60,000,000 eggs, but a hen can't, so there is no use in the hen's worrying about it.

What I like about Sperry Flour

It's so dependable! In the 12 years I've been using Sperry Delected Snow Flour, it has never once disappointed me.

They make it of the finest wheats, with exacting care, and then they test it—carefully—by baking with it! We actually cannot buy it until it produces perfect results.
