

# PERRY SOCIAL NEWS OF WEEK

**PERRY (Special)**—Mr. and Mrs. Arthur Robinson made a trip to La Grande—the first of the week—to consult a doctor about their son Donald, who recently had the misfortune to break an arm while playing.

Miss Wilma Thompson visited Miss Opal Heibel recently.

Mrs. Naomi Robertson substituted for Mrs. Mary at Kall in the school room here Monday. Mrs. Kall has been ill for several days but was able to resume her duties again Tuesday.

Miss Rita Robinson was a caller at the Ed Fell home one day last week.

Mr. and Mrs. Horace J. Nelson were New Year's visitors at the home of Mr. and Mrs. Gilbert Hallentyne of this place.

Mr. and Mrs. William Watson departed for Enterprise the first of the week after seeing the new store proprietor, Mr. Jensen, settled. Mr. Jensen is from La Grande.

Mrs. Walter Martin was a Sunday visitor at the home of Mrs. Howard Robinson.

Mrs. Nephth Combs called upon Mrs. Gilbert Hallentyne recently.

Joseph Baxter, of Union, is again staying at the Robert Turner home while employed by the Grande Hoade Lumber company. Mr. Baxter spent his Christmas vacation at his home at Union.

Mrs. Archie Stevens is on the sick list this week.

Miss Hattie Martin recently had her tonsils removed and had to miss a few days of school.

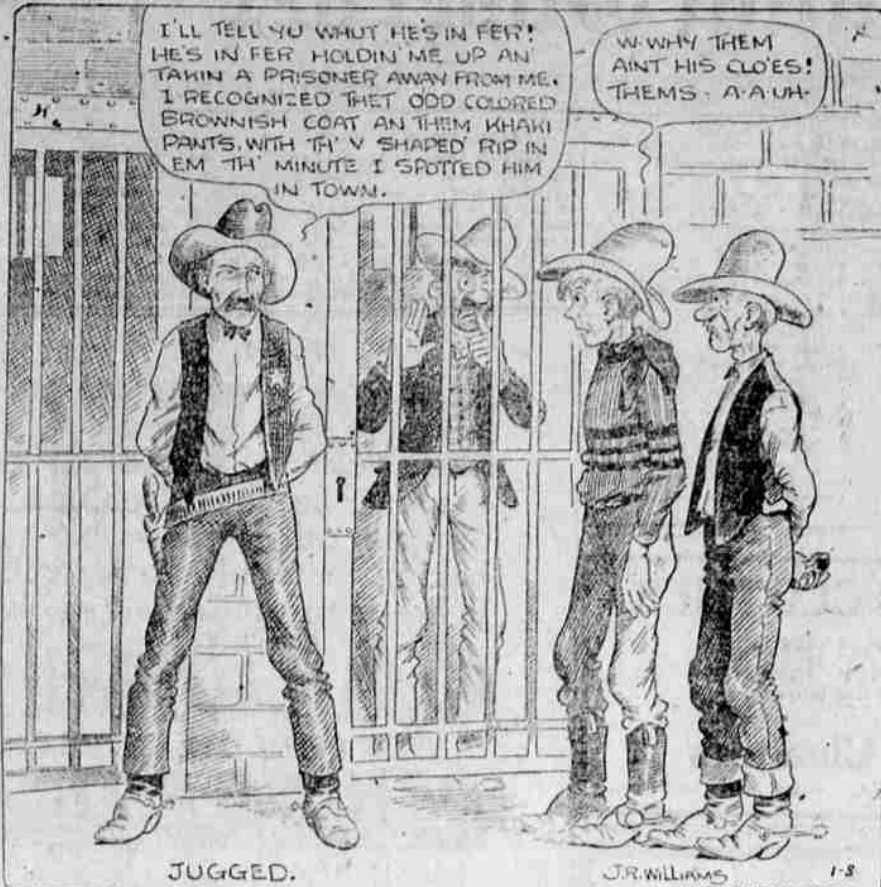

Mrs. Leonard Northcott, who recently underwent an operation is improving nicely.

Mrs. B. Heibel and family also David Johnson and family spent New Year's at the home of their parents.

Paulie Reher, who has been ill for a few days is again able to attend school.

Al Reher and family of Perry, spent New Year's day visiting the former's sister, Mrs. Fred Johnson, of La Grande.

## OUT OUR WAY

## WIRE MOVIES MAY BE NEXT

**NEW YORK (AP)**—The chief difficulty in the transmission of motion pictures by wire, says V. K. Zworykin of the Westinghouse Research Laboratories, is that of subdividing the field into small enough units for transmission, so that when they are enlarged upon a screen they present a definite image of the object.

Zworykin is the inventor of the light cell by which light impulses are translated into mechanical operations. He finds the problem of picture transmission theoretically possible, but the mechanical difficulties are by no means overcome. Another year may result in a solution.

The light cell, which is a combination of the principle of the radio tube and a photo-electric phenomenon discovered years ago by Hertz, is now used successfully by the All-America Sales for printing cable dispatches sent across the Atlantic. The electric impulse coming across the cable is so slight that Hertz has been impossible to use mechanical printers to record the dispatches.

The light cell catching the ray of light reflected from a mirror galvanometer, sensitive to the smallest electrical impulses, translates the light rays into electrical impulses strong enough to operate printing devices, which record the dots and dashes.

A SMALL HEATER With Much Heat.

The Westinghouse "Cozy Glow" electric heater will take the chill out of these frosty mornings, just attach to your lamp socket—the current consumption is small and the initial cost is very low.

## URNS TUBING INTO CASING

**WASHINGTON (AP)**—An apparently off-hand suggestion on shell making, dropped casually into an army ordnance experts meeting, may serve to simplify Uncle Sam's whole problem of having at hand enough big gun projectiles to shoot up any enemy who obtained or attempted to obtain a footing on American soil.

Experiments already made indicate a wholly practical way of turning the American peace-time production of 35,000 tons of seamless steel tubing every year into a war output of shell casings up to 16-inch caliber at a rate of thousands per day without additional machinery.

All shell casings used during the war or manufactured since were turned to size, pointed on one end and squared off on the other in lathe, then bored out. It is a long, hard manufacturing process. It took terrific drive in the war to build up the output of any single factory to 200 or 250 shells a day.

At a meeting of ordnance men, a reserve officer who is a steel plant man in civilian life, asked, in discussing shell turning facilities, why it would not be possible to spin them hot off of whirling, red-hot seamless steel tubes which are produced commercially for gas well use in virtually all sizes for the artillery up to 10 inches in diameter. Experiments were started voluntarily to test the scheme. While the War Department is not in a position to make any definite announcement, it looks as though a long stride in national preparedness had been made.

"They just cut 'em off like sausages," is the way one officer described the new process.

Even the necessity of boring out the squared and pointed ends or-

ter the spinning in order to make a place for the explosive charge and fuse has developed a new angle of its own. It appears in practice that impurities in the metal are forced toward the center by the spinning process and when this is cut out by boring the impurities are removed automatically.

The ten year ammunition reserve project of the War Department is based on storing \$200,000,000 worth of small arms and artillery ammunition, the oldest projectiles and cartridges to be fired away each year and replaced with new stock. If the spin shell case plan works out and a system for fast loading, fuse making, banding, etc., is developed to supplement it, presumably a material reduction could be made in the stored reserves as the twelve month delay in procuring projectiles in sufficient numbers after war is declared now controlling the department's plans, would have been averted down.

**Radio Code of Standards Is Aim of Committee Work**  
**CHICAGO (AP)**—Having discovered that the public wants standardized radio parts, the manufacturers have gone back to the consumers to find out how they wish them made. Committees of manufacturers are now at work on the replies to thousands of questionnaires, from which will be formulated a code of standards.

Radio thus becomes one of the first great industries of its size, from which the public expects that the Smith company's part must fit the Jones company's apparatus.

"The dealer and the consumer have both been seriously affected by this irregularity of parts," says A. J. Carter, chairman of the standards committee of the Radio Manufacturers Association. "There isn't a man in the radio game to-day who hasn't wished for a Moses to lead the industry out of the wilderness of misfits. The Radio

## Flight Surgeons Study Air Hazards to Reduce Effects

**WASHINGTON (AP)**—The game of ill to which the flesh is heir is not going to be increased unwittingly by man's adventures into the air realm if army flight surgeons can help it.

A summary of recent experimental investigations by the air service special school for doctors discloses the intense study that is being made of the physical effects of such things as high altitude, cold, motor exhaust gases and the like upon army flying personnel.

And it additionally shows that the flight doctors at the school put in nearly 200 hours of high flying in the last calendar year to carry out their researches, much of it above the 15,000 foot level.

Some phases of the study of the effect of low oxygen on men doing physical work, had to do with the efficiency of airmen who are called upon to undergo work strains at high altitudes.

## Westport Mill Working 2 Shifts

**WESTPORT, Ore.**—The Westport mill started Monday with double shifts, giving work to 300 men. The mill was down for 21 days during which it was completely overhauled. Now in first-class condition it is expected to run at full capacity until the 1st of July.

Hunt the bright side. Some prices are down. You can get 1925 calendars very cheaply now.

## DURING THE TEENS

Healthful progress of a child depends upon the foods utilized during the age of growth and through the teens.

**Scott's Emulsion** of pure cod-liver oil is a vitamin-rich food that favorably influences growth and strength. It is a food- tonic of special value during the "teen-age".

Let us serve you Electrically

We are fully prepared to take care of your electrical needs. How about some new Mazda Lamps for those empty sockets?
