

"CATERPILLAR" TRACTORS

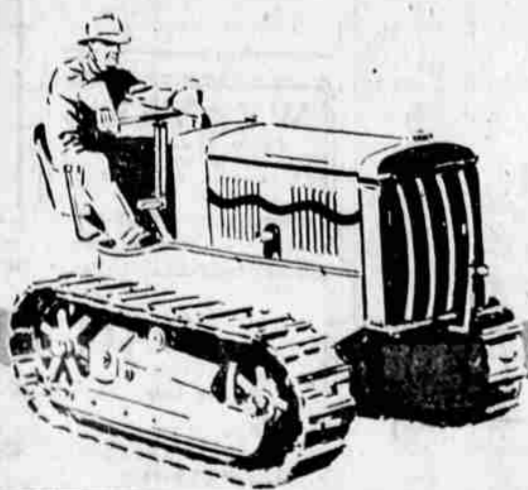

--and--

HOLT COMBINED HARVESTERS

STEADY POWER

STEADY --because reliable.
STEADY --because enduring.
"Caterpillar" Tractors deliver Steady power on any job.
Uninterrupted performance --a full day's work even in the face of unfavorable conditions.
A healthy habit of holding to the job without complaint.
The Steadiness of inbuilt stamina and endurance.
Plenty of Power--a motor that "gets down and lugs" in the pinches; a willingness to hold to hour-after-hour work.
"Caterpillar" Tractors are built in five sizes--one of which is exactly suited to your work
Let us help you select it--we're glad to put you in touch with "Caterpillar" owners who have solved problems like yours.
Folders and catalogs for the asking.

ANNOUNCEMENT

We are pleased to announce our appointment to the Dealership of the Holt Combined Harvester for Union, Wallowa, Baker and Malheur Counties in Oregon, and the entire State of Idaho south of the Salmon River.

Holt Combined Harvesters will be manufactured by the Western Harvester Company, which is owned entirely by the "Caterpillar" Tractor Company.

Forty years of development are back of the Holt Combined Harvester. The idea of harvesting grain in one operation was developed by Holt and has revolutionized the harvesting methods of the world.

The Model 30 and 32 Steel Harvesters (12 to 20-foot cut) will be manufactured and marketed by the new company. Prices of the new machines have been substantially reduced and the prices of spare parts for all Holt Harvesters have been cut almost in half.

Unusually liberal terms are available under the new sales policy. An arrangement has been perfected under which the Purchaser, his Banker, the Manufacturer and the Dealer all participate in the transaction to their mutual benefit. We consider it the most sensible method ever devised for the sale of farm machinery.

MARKING ANOTHER EPOCH in COMBINED HARVESTER HISTORY

1886
1897
1920
1926

With the formation of the Western Harvester Co. to continue the harvester business developed by The Holt Manufacturing Company during the past half-century, another great achievement is made.

In the 80's, when Holt first offered grain growers a cheaper, better, quicker method of harvesting grain -- that was the first notable achievement.

Then, in the 90's, the side-hill combined harvester was invented -- another Holt accomplishment, and unquestionably the greatest achievement in harvester development up to that time.

Then, a few years ago, Holt announced its steel Models 30 and 32 -- longer-lived, easier-running, lighter-draft machines that marked another important step in harvester progress.

Successful from the start, the Models 30 and 32 were further developed and refined each year, to the point that has now been reached, where these machines will give maximum service with minimum care and operating and upkeep cost.

Now comes the perfection of the organization behind the product.

Western Harvester Co. will concentrate its energies, organization and manufacturing facilities on the production of "Holt" Combined Harvesters -- the steel Models 30 and 32. It includes in its organization the men responsible for the successful design and construction and sale of "Holt" Harvesters in the past.

The entire capital stock of the Western Harvester Co. will be owned by Caterpillar Tractor Co. The new Company will occupy the former Holt factory at Stockton. It will sell its product through an organization of the highest type of dealers.
