Sister Mary Says:

Breakfast—Stewed fish with orange juice, cereal, thin cream, broiled ham, creamed potatoes, graham muffins, milk, coffee.

Luncheon—Baked rice, celery sandwiches, cake crumb pudding, milk, tea.

Dinner—Stuffed baked spare ribs, candied sweet potatoes, combination cabbage salad, whole wheat bread, apple stump, milk, coffee.

This dinner is planned to warm the cockles of the wintery heart. Well baked spare ribs made savory by its stuffing, the snappy salad of seasonable vegetables, and the old-fashioned apple dessert will put cheer into the heart and bleakness of northern evenings.

Stuffed Baked Spare Ribs:
Two short lengths of spareribs, 4 cups bread crumbs, 2 medium-sized onions, 2 cup sliced celery, 2 tablespoons melted butter, 1 egg, milk to moisten, salt and pepper.

Wipe meat and securely bind the two pieces together to make a "crown." Rub with salt and pepper. Peel and mince onions. Combine with bread crumbs, butter, celery, salt and pepper and egg slightly beaten. Heat milk and add enough to make moist, but not sticky. Fill crown of pork with stuffing and put into roaster. Roast 2 1/2 hours in a hot oven, basting frequently with the drippings in the pan. Remove to hot platter when done and cut away the cord. The meat will keep its shape after cooking. To serve cut between the ribs into the stuffing. Serve as many ribs with stuffing for each portion as preferred. (Copyright, 1924, NEA Service, Inc.)

Breakfast—Cereal cooked with chopped fish, thin cream, crisp toast, marmalade, waffles, syrup, milk, coffee.

Luncheon—Dried beef with rice, orange and peanut butter sandwiches, orange jelly, vanilla cookies, milk, tea.

Dinner—Pot roast of beef, brown gravy, buttered parsnips, beef and cabbage salad, graham bread, canned cherries, spice cake, milk, coffee.

Orange juice is slightly sweetened and stiffened with gelatine to make the orange jelly suggested in the luncheon. Served with whipped cream it makes a delicious, nourishing dessert for small persons or grown-up ones.

Dried Beef With Rice
One-fourth pound dried beef, 1/2 cup rice, 1 cup milk, 1/2 teaspoon paprika, 2 tablespoons butter, 1 egg.

Cook rice for 20 minutes in slightly salted boiling water. Drain and pour two quarts of boiling water through rice. Shake well in strainer. Melt butter in frying pan, add dried beef picked into small pieces and brown lightly taking care the butter does not scorch. Pour over milk and let stand ten minutes over a low fire on the back of the range. Add prepared rice, paprika and eggs well beaten. Mix thoroughly and turn into a buttered baking dish. Bake 30 minutes in a moderate oven. Serve very hot. Do not add salt for the meat will make the dish quite salty enough.

Peewicktoo

This is Peewicktoo, was Eskimo lad who lives way up in the northern edge of Canada, where the nights are six months long. This photo, showing his winter costume, was taken last summer by a resident of Ottawa, Ont.

Capt. and Mrs. E. T. Huffman have a summer home in the high Sierras. But they spend their winters on the "Annie M. Held," 300-foot full rigger, lying in Oakland harbor. For many years Mrs. Huffman sailed with her husband and they both like the roll of the vessel. Moreover, there is plenty of room for dancing and the cabins care for overnight guests.

The Garden

GARDENERS MAKE THEIR SOIL
Gardening by prescription is the up-to-date method. We now know that the soil is made up of chemical elements. All we need to do is send a sample to the state experiment station or a chemist and we will get back a report showing just what is in it and just what is needed to make it right to grow crops, either of flowers, vegetables or farm crops. The chemical treatment of the soil is one of the modern wonders of horticulture.

There are ten chemical elements necessary to plant growth and not a spear of grass could be grown if any one of them were completely absent. The late Dr. Cyril G. Hopkins of the University of Illinois, had a little memory trick by which to remember these necessary elements. He said: "Remember C

hopkins' case." If you repeat C. Hopkins' case, you have the chemical symbols for the essential soil elements for plants. They are C, carbon; H, hydrogen; O, oxygen; P, phosphorus; K, potash; N, nitrogen; S, sulphur; Ca, Calcium, the chief element of lime; and Fe, iron.

"C. Hopkins' case" feeds the plant the nutrient they need to flourish and we place fertilizers in the soil according to the deficiency of any one of these groups. Oxygen, hydrogen, iron and sulphur are always present in sufficient quantities so that the gardener studying this fertilizer problem needn't worry about them. Nitrogen and calcium, lime, are the chief fertilizers with potash and phosphorus close up in the fertilizers we furnish the soil. Carbon to make carbonic acid in the soil to liberate plant food is furnished in decaying vegetable matter.

Soil is what we make it. If it is light, sandy soil, we make it heavier by adding in manure or tuff-

ing under green crops to decay. If it is heavy we make it lighter by incorporating sand or crushed limestone and draining it. If it is heavy else we break it up with humus, decaying vegetable matter, limestone and sand. Chemical elements lacking we now furnish in commercial fertilizer. We are reaching soil control.

"Ham and Eggs" Is Popular Meat Dish on Dining Cars

(CHICAGO (AP).—The old standby of "Ham-and" is the most popular meat dish on the dining cars of 45 leading railroads of the United States and Canada, it was

found in a survey made by the national livestock and meat board. A questionnaire sent out by the department of agriculture on meat consumption in the home, showed a preference for beef, but the livestock board's findings disclose that dining car patrons prefer pork, each of the roads investigated serving ham and bacon.

Roast beef was the most popular dish with sirloin steak a close second and lamb chops in equal favor with the steaks.
