## Community Mixed Chorus Will Be Organized Here

Plans for La Grande's first community mixed chorus will be whipped into shape at the Neighborhood club rooms in the library basement at 7:45 p. m. Thursday. All men and women singers of the city are urged by the leaders to be on hand.

Fifty or more voices are desired, according to W. W. Nussbaum, public school music supervisor, who will direct the chorus. Although its musical undertakings will hinge on the tastes of its members, the chorus is expected to do some worthwhile things, he said today.

"A good chorus is the biggest musical asset a community can have," Mr. Nussbaum asserted. "La Grande already has a fine band. So we are hopeful of organizing a chorus that will rank high. The really big things in music have been composed for choruses, you know."

The mixed chorus will be built around the Monday Musical chorus, which is now three years old.

## The Garden

THE PHEASANT'S EYE NARCISSUS

The Pheasant's Eye narcissus, so called because of the scarlet rim about the yellow disk in the center, also known as the poet's narcissus, is the hardiest and easiest to grow of all the narcissus tribe. It is also the class that will do best from late planting as some of the varieties, particularly the trumpets, need earlier planting. The poets may be planted as long as the ground can be worked and they will grow anywhere, in any kind of soil, even in grass.

There are two distinct types, poeticus ornatus, the early-flowering, and recurvus, the old-fashioned later variety, which has been in American gardens since Revolutionary times. These snow-white, deliciously fragrant bulbs are now being used by the million for naturalizing in woods with the native bluebell or mertensia, making magnificent spring pictures. The same planting on a small scale is equally delightful in the garden.

Both die down and lose their leaves early in the summer. The poet's narcissus can be grown easily enough in America now that we must grow our own narcissus and daffodil bulbs and nearly all old gardens have them in quantity.

It is an excellent plan to mix equal quantities of the two types in making beds in order to prolong the season of bloom as their effect in the garden is the same, alternating an ornatus and recurvus bulb, the latter coming into bloom as the former is fading. The ornatus or early type is slightly larger-flowered, with flat petals. The recurvus, as its name indi-

cates, has the petals slightly reflexed.

Both are of the purest white and deliciously fragrant. They grow excellently under the edges of shrubbery or between groups of perennials. The narcissus and daffodils seem to like to nestle among the roots of other plants so there is no fear of crowding them.

## Multiply this saving by 40

The average family, let us say, consumes about 40 cups of coffee a week. Consider the saving M·J·B gives you by its concentrated strength and richness. For you can use less of M·J·B to each spoonful and still have a rich, satisfying cup of coffee. Now multiply this saving 40 times each week—it counts up, doesn't it?

It is true you buy coffee by the pound but you drink it by the cup. So it's really the cost-per-cup that counts! And measured by this scale, M·J·B is the most economical coffee you can buy.

Put it to a week's test and see!
