ICE CREAM

Ice Cream is held in almost universal esteem as a delicious desert. The question as to its food value, and how it compares in economy with some of our well known foods, is given scant consideration by many. A comparison of calorie values shows that ice cream is more than a delicious dessert, that it is a substantial and economical food. Ice Cream containing 10% butterfat has just about the right proportion of protein, carbohydrates and fats to meet the needs of the human body. In other words is very nearly a balanced food and can be eaten by all with good effects.

Blue Mountain Ice Cream

In making our Ice Creams we use only fresh dairy products from the Grande Ronde Valley and these are Homogenized and Pasteurized to insure absolute purity.
