HEALTH

GUARD HEARING IN INFANCY

By John McCoy, M. D., New York City.

Member Gorgas Memorial Inn.

There are definite causes which produce deafness in infancy, childhood, adult life, and old age. The fewer the predisposing causes in infancy and childhood, the greater the chance for escaping deafness in later life. A study of these predisposing causes reveals the value of the ideas of prevention which are sponsored by the Gorgas Foundation.

In infancy probably the greatest cause of complete deafness is meningitis or inflammation of the membrane covering the brain. This destroys the nerves of hearing and, no matter how efficient the outer ear, the middle ear, and the inner vibrations cannot reach the brain.

Scars of health throughout the country are energetically stamping out this condition, but it is the parents' duty to respect the quarantine when this disease is discovered. That is simple but effective prevention.

Next in the order of frequency among the causes of deafness in infancy are the conditions known as adenoids and colds in the head. Adenoids, which predispose a child to frequent colds in the head, is the name given to a clump of tissue at the back of the nose where it joins the throat. Some individuals are predisposed to an overgrowth of this tissue and in others this tissue becomes very much enlarged as the result of frequent colds or inflammation.

This tissue becomes harmful in two ways: by blocking the eustachian tube and preventing air from getting to the middle ear; by displacing the eardrum to frequent head colds or inflammation in the nose and throat.

This inflammation spreads through the eustachian tube, inflames the middle ear and thus causes middle ear abscess and mastoiditis. This adenoid tissue may have to be removed as early as the first month of life, because it prevents the child from breathing properly through its nose, thereby preventing proper nutrition by inability to nurse; or later because of frequent inflammation or head colds causing abscess in the ear and mastoid.

There is a prevailing notion held by the laity that when mastoiditis occurs and an operation is necessary, loss of hearing will follow the operation. The reverse is the case, however, as the mastoid operation is done to save the hearing by draining off the abscess in the ear.

Inherited syphilis is one of the most less frequent conditions which might affect the hearing, and usually does so by attacking the internal ear.

Ever taste anything Better than these Deep Fried Tomatoes?

BESIDES being a treat that you and every member of the family will enjoy, these Fried Tomatoes will demonstrate to you what a remarkable fat Mazola is for deep frying.

Being a pure vegetable oil—pressed from the hearts of golden corn kernels—Mazola fries foods so that, when ready to serve, they are greaseless and easily digested. And after frying, merely strain the Mazola, using it over and over again—as it never carries odors or flavors from one food to another.

This recipe is from Ida Bailey Allen's New Book—see coupon below.

4 medium sized tomatoes
Fine dry bread crumbs
Mazola
1 egg
1/2 cup milk

Wash and dry the tomatoes and slice crosswise to make three thick pieces. Dust with salt, pepper and a little sugar and roll in fine dry crumbs. Beat the egg, add the milk, dip the slices in this, dip again in crumbs and fry in deep Mazola. Drain the tomatoes on crumpled paper and serve plain, or on toast with white sauce.
