Bridge Pointers

By Milton C. Work

Two weeks ago we opened the subject of original suit-bids and so far have covered bidding suits of five cards or more, and have noted the difference between the requirements of "No Trumps" and suit-bids. One requirement of the latter was two quick tricks.

Added length in the suit to be bid does not compensate for the absence of one of the quick tricks. It may seem strange to the beginner that one club may be bid on Ace-King-x-x-x but not on Ace-Queen-x-x-x and such a rule would be strange beyond explaining if nothing but a Club contract were under contemplation, certainly seven trumps headed by Ace-Queen will yield more tricks than five headed by Ace-King. But an original suit-bid of one always contemplates a possible No Trump contract by partner, and a partner who wants to bid one of a suit initially on Ace-Queen-Jack-x-x-x the same as on Ace-King-x-x-x.

Considerable space has been devoted to discussing hands whose entire strength lay in one suit, because we were discussing minimum strength. The reader must not suppose that having only one quick trick in the suit named here the bid, if at least one more quick trick be found elsewhere in the hand; much less is it a detriment to have extra quick tricks, or additional strength of any kind, or more than five cards in the suit.

This subject will be continued next Saturday.

HEALTH

KEEPING TUBERCULOSIS AWAY

By U. S. Public Health Service WASHINGTON (AP)—Although the death rate has been greatly diminished in recent years, tuberculosis still is widespread and of tremendous public welfare and economic significance.

Tuberculosis is primarily a disease of youth, the present opinion of physicians being that most people contract it in childhood. The infection may remain dormant for several years, becoming active at a time when the body vigor is at low ebb.

Parents who take the viewpoint that it is not necessary to keep their children from exposure to measles or whooping cough, upon the theory that they are certain to contract them eventually, are courting the danger of later development of tuberculosis and other serious maladies.

Now, during the outdoor season, is the time to build children's health against the attacks of disease in the years to come. They should be protected as long as possible from measles, scarlet fever and whooping cough. They should have 10 hours sleep every night.

Parents should insist upon their eating sufficiently of plain, wholesome food, and provide an outdoor playground. Physicians advocate plenty of exercise but caution
