The New Ideal Red Jacket Boiler

This is the first completely equipped, metal-covered porcelain enamel finished boiler at popular prices! It is designed with long double flue gallery through which the hot gases of combustion must travel before escaping—a distance twice the boiler's length—thus insuring the highest degree of operating economy. Each boiler is fully equipped with automatic regulation and all accessories. Inside the beautiful red enamel jacket is a one-inch asbestos-cell lining, providing thorough and impenetrable insulation. All doors are finished in porcelain enamel. The boiler is so clean and beautiful that it enables you to transform your cellar into a useful, desirable place.

New Ideal Red Jacket Boiler

Burns hard or soft coal, wood, coke, oil, or gas

1. Square sectional design
Permits long double flue gallery and the utmost operating economy.
2. Ideal red jacket insulation
Complete with every boiler, providing thorough and impenetrable insulation at no extra cost.
3. Long double flue gallery
Retains the hot gases of combustion within the boiler for the longest period of time to insure the extraction and utilization of their heat in the highest degree.
4. Porcelain enamel finished doors
Heat and rust-proof, insuring permanent beauty.
5. All accessories
Automatic regulation, steam gauge, water gauge, try cocks, safety valve or altitude gauge and thermometer, also firing tools.
6. Duplex joint between all sections
Machine-ground contact surfaces and sealing groove insure gas-tight construction.
7. Two-way smokehood
Permits direct or elbow connection to chimney.
8. Angular grate bar construction
Makes for more efficient, convenient operation, and allows the use of smaller sizes of coal.

New "American" Corto The Radiator Classic

With "American" Packless Valves
and Airid Air Valves

1. Original Corto patented design
The finest union of beauty and efficiency ever achieved in radiators.
2. 1 1/8 in. diameter tubular construction
Insure greatest strength at maximum heat output.
3. 7/8 in. Internal water-ways
Insure standard water content of one pound of water per sq. foot of radiation.
4. 1 3/16 in. between radiator tubes
Gives minimum resistance to air flow.
5. Right-and left-threaded nipple connection between sections
Original with the American Radiator company. This is the tightest and safest radiator joint construction known.

Radiator Accessories

ARCO PACKLESS VALVES. Completely opened with one smooth turn. Require no repacking. Permanently leak-proof.

AIRID AIR VALVES. Quick, positive and noiseless in venting. Nothing to adjust; need no attention.

The "American" Corto

The Radiator Classic

The beautiful "American" Corto, the first slender tube radiator manufactured in this country, is well known among architects and engineers, heating merchants and home owners, as the standard for heating comfort and beauty.

With Corto Radiators upstairs and an Ideal Red Jacket Boiler in the cellar, you are assured of a lifetime of genuine heating comfort with the utmost economy.
