Is your SPINE in line?

Perfect alignment of the spine means perfect health. Imperfect alignment means that one or more of the vertebrae of the spine are out of the natural position. This produces pressure on the delicate nerves at the point where they leave the spine. Because of this the brain cannot get the full amount of life force over them.

Whatever part of the body, whether it is the heart, stomach, lungs, kidneys, etc., that is supplied by a pinched nerve, is bound to be weak, because every cell in the body receives its life force over the nervous system, and if the nerve is pinched this life force is decreased.

CHIROPRACTIC ADJUSTMENTS
