Most of us take too little trouble about. So be sure to serve toasted sandwiches as soon as prepared before the filling has any chance to soften the toast.

This is an excellent way to use up left-over and the open sandwich provides an ideal method of serving delicate spring vegetables in their own juices. For instance, an open spinach sandwich with a garnish of hard-cooked egg means that the toast can absorb the moisture clinging to the vegetable. Spinach and bacon sandwich will prove popular where plain spinach would be unwelcome.

MENUS

The hot sandwich is an excellent solution of the luncheon problem on many occasions. Some combinations can be served satisfactorily to an entire family, particularly when toast is the framework. The toasted sandwich, a glass of milk and fresh or stewed fruit makes an ideal spring luncheon for children, as well as adults.

Of course there are several types and classes of hot sandwiches besides the regulation toast with filling. There are those in which sautéed slices of bread, French toast or fresh slices of bread oven-toasted with the filling are used. The hot baking-powder biscuit type seems more like a meat or vegetable shortcake than sandwich.

There are dessert sandwiches and breakfast sandwiches and the novelty of them makes it possible to serve simple, nourishing foods so they will be welcomed by everybody. Open sandwiches are attractive with their garnish of minced parsley, thinly sliced pickle, olive or grated cheese in place of the top slice.

Many of the most sandwiches are combined with vegetables, making a salad unnecessary. Others require a crisp salad of cabbage, apple, celery or beets to make a complete meal.

Crisp toast is more wholesome than plain untoasted bread since it makes us chew, the process that

'Wringing makes the Clothes CLEANER'

For homes without electricity, the Maytag is available with in-built gasoline motor.

THE squeezing action of the Maytag Roller Water Remover forces out the last bit of dirt that would dim the clothes, the last particle of soap that, if allowed to dry in, would rot the fabric. The final drying should be on the line, preferably in the sunlight. Airing and sunning makes the clothes sweet, clean and sanitary.

The Maytag Roller Water Remover was developed at a cost of over a quarter of a million dollars. It is an outstanding improvement in soap and water removal methods. Combined with the fast, gentle but thorough washing action of the Maytag cast-aluminum tub and gyrofoam action, it gives you a cleaner washing with less time and with less effort.
