One reason why Snowdrift pie crust is FLAKIER

NEW

The quicker pie crust is made, the less danger there is that it will be heavy or tough.

One reason why Snowdrift makes such flaky, tender crust is that it cuts into the flour quickly. You aren't tempted to "work" it or fuss over it. Snowdrift is creamy — it's all creamed for you before it's packed in the air-tight cans. With just a few quick strokes, the Snowdrift and the flour are all one smooth blend.

Creamy, fluffy Snowdrift now comes in three pound and six pound buckets which are very easy to spoon from. You'll find them much more convenient, for you never need to rub your fingers against the sides when you reach in for the last spoonful.

At your grocer's, you'll know them by the inviting new design that looks as white and fresh as Snowdrift itself.
