How to make canned vegetables even more appetizing

The taste of nearly all good foods is improved with sugar

SCIENCE now knows that the great majority of the canned fruits and vegetables on the market today are rich in vitamins.

This is great news to all who wish to be well fed and healthy. In order that your family may relish these healthful foods, be sure that they are served in the most appetizing way possible. For example, add one level teaspoonful of sugar to one can of corn when heating it for serving. One rounded tablespoonful, at least, of sugar should be added to one can of tomatoes to develop the taste and make them palatable and delicious. The flavor of canned peas is improved by adding one-half to one teaspoonful of sugar to each can, and for string beans add one-fourth to one-half teaspoonful per can. The general rule is that all canned vegetables should be sweetened to taste so that they will be more enjoyable.

As a nationally recognized medical authority says, . . . "canned tomatoes after three years were as rich in vitamins as raw tomatoes. . . . canned strawberries were also found to equal raw strawberries in vitamin content." He names numerous other canned fruits and vegetables and all were found rich in vitamins.

Welcome the canned foods to your table. To do so is to welcome health to your home. Eat plenty of varied, nourishing foods sweetened for taste and zest. A bit of sweet makes the meal complete. The Sugar Institute.
