

PRICES REDUCED ON "CATERPILLAR" PRODUCTS

Effective At Once

These reductions resulting from large sales volume represent the sixth reduction in four years. The aim of the company to build constantly better tractors at lowest possible prices has been achieved, exemplified by a total reduction during that period of approximately \$2000 in the price of the "Sixty".

The completion of the big Peoria combine plant makes possible substantial savings and permits these reductions on harvesters.

The acquisition a year ago of the Russell business and the adding of their splendid products to the "Caterpillar" line permits substantial reductions on all road machinery.
