OUT OF THE HEART—A good man out of the good treasure of his heart bringeth forth that which is good; and an evil man out of the evil treasure of his heart bringeth forth that which is evil, for of the abundance of the heart his mouth speaketh.—Luke 6:45.

Abe Martin

"My experience has been that you can't poison an English sparrow without poisoning two or three innocent robins," declared Tell Blakley, today, in denouncing the proposal to dope industrial alcohol. Ex-President Coolidge has caught the spirit and "it aid in keepin' the wheels turnin'" by writin' a history of the U. S., to be carved on stone, thus givin' some poor stone cutter a couple o' hours work.

WHAT? One-half of 1 per cent normal tax on first \$1000 in excess of personal exemption and credits. Two per cent normal tax on the next \$4000. Four per cent normal tax on the balance of net income. Surtax on net income in excess of \$10,000.

YOUR INCOME TAX

By joint resolution, adopted upon recommendation of the president and secretary of the treasury, congress has reduced by 1 per cent the normal tax on individual incomes for the calendar year 1929. The reduced rates are one-half of 1 per cent on the first \$4000 of net income above the personal exemption and other credits, 2 per cent on the next \$4000, and 4 per cent on the remainder, instead of 1 1/2 per cent, 3 per cent, and 5 per cent. The surtax rates on income in excess of \$10,000 are unchanged. The tax rate on the income of corporations and life insurance companies is reduced from 12 per cent to 11 per cent.

No change is made in the provision relating to the filing of returns. Returns are required of every single person whose net income for the taxable year was \$1500 or more, every married person living with husband or wife whose net income was \$2500 or more, and every person single or married whose gross income was \$2500 or more regardless of net income. Husband and wife living together may each make a separate return, of the income of each, or their income may be included in a single joint return, in which case the tax is computed on the aggregate net income.

Under the heading of single individuals are included divorcees and persons separated by mutual consent. A single person who is the head of a family and whose net income for 1929 was \$1500 or more must file a return, even though, by reason of the personal exemption and credit for dependents, his income is not taxable.

More than 4,000,000 individual income-tax returns were filed last year. Many contained errors which knowledge of the fundamental provisions of the revenue act would have avoided. As an aid in the preparation of correct returns for the year 1929, the bureau of internal revenue has prepared a series of newspaper statements, of which this is the first. Taxpayers also are advised to read carefully the instructions on the forms, copies of which have been sent to persons who filed returns for 1928.

A THREE DAYS' COUGH IS YOUR DANGER SIGNAL

Coughs from colds may lead to serious trouble. You can stop them now with Creomulsion, an emulsified creosote that is pleasant to take. Creomulsion is a medical discovery with two-fold action: it soothes and heals the inflamed membranes and inhibits germ growth.

Of all known drugs creosote is recognized by high medical authorities as one of the greatest healing agencies for coughs from colds and bronchial irritations. Creomulsion contains, in addition to creosote, other healing elements which soothe and heal the inflamed membranes and stop the irritation, while the creosote goes on to the stomach, is absorbed into the blood, attacks the seat of the trouble and checks the growth of the germs.

Creomulsion is guaranteed satisfactory in the treatment of coughs from colds, bronchitis and minor forms of bronchial irritations, and is excellent for building up the system after colds or flu. Money refunded if not relieved after taking according to directions. Ask your druggist. (adv.)

CREOMULSION
FOR THE COUGH FROM COLDS THAT HANG ON

By Williams

out with the usual platter of bells and sirens. As the sound of the fire apparatus drew closer and closer, the sensitive microphones picked it up until it drowned out the college songs and rooting shouts.

The firemen realized the "false alarm" as soon as they pulled up to the movie lot but the damage was done and the bonfire blazing merrily and quite beyond control for rotates that very night.

Elliott Nugent, Robert Montgomery, Sally Starr, Cliff (Clarence) Edwards and Phyllis Crane play the leading roles in the college comedy.

MEDICAL DISCOVERIES

When Thomas Alva Edison carbonized a strand of bamboo and, placing it in a vacuum, caused it to glow by passing an electric current through it, the incandescent lamp and the illumination industry were then and there founded with rock-ribbed certainty.

When Morse succeeded in passing a dot and dash message along a few feet of copper wire, the possibilities of telegraphic communication were there and then established with absolute certainty.

But if John Jones, M. D., has a patient suffering from chronic indigestion and either in scientific curiosity or in desperation injects into the patient distilled water, and lo and behold! the patient ceases to suffer from indigestion, has Dr. John Jones made a great medical discovery, and has it thereby been demonstrated that the cure of chronic indigestion is the injection of distilled water?

The self-evident answer is no. Discoveries, inventions, and the like may be made with consistent certainty in other sciences. But in biology an alleged discovery must be tested, re-tested and substantiated to a fair degree of universality before it can be accepted as a valid discovery.

When a research worker in other types of scientific work first publishes his protocol, that is, a detailed description of his studies, in scientific journals.

This allows for scientists and other laboratorians to repeat the same experiment following substantially the same routine as the original worker. If these testings bring the same results as are claimed by the discoverer then the discovery is validated.

It, on the other hand, others fail to achieve the same results, the matter is studied further.

Could You Get Extra Cash in an Emergency?

If you suffered an accident and were put out of work, or had a long and expensive sickness in the family, or you had a chance to buy a house and lot at a bargain—could you raise the necessary cash in such an emergency?

If you have saved a little of your income right along, if you have accumulated a few bonds or other good securities, if you have invested in a good piece of real estate—then you'd naturally expect that you could borrow a little extra money when needed.

But if you have never saved anything, if you've always spent everything you could make, if you owe more bills than you can pay—under those circumstances, you'd hardly blame anyone for refusing you a loan.

Your credit is a very tangible asset that is built or destroyed by the way you handle your financial affairs. Your banker can advise how your credit can best be strengthened. We are glad to have a friendly talk with you any time on reasonable plans for saving and investment.

"Forty-second Year of Friendly Service"

Six hundred thousand dollars have been bequeathed to the city of Cincinnati by Miss Florence Weaver, who provides that the money be held at accrued interest for five hundred years, then spent on crippled children, poor people, etc. Since money doubles itself in approximately 11 years when safely invested, you can figure out for yourself the probable sum to be realized. Someone estimates it at 24 quadrillion—whatever that means. And it wouldn't take a tenth of the time to estimate that there is a very good chance that crippled children and poor people will both be extinct five hundred years from now. A ridiculous bequest that can never be carried out. A lost golden opportunity to do something worthwhile for present generations.

Three newspaper publishers have been appointed to diplomatic posts within the last few weeks by President Hoover. Two of them have held other foreign appointments previously and one would conclude that at least some newspaper men are diplomatic, tactful. A president might name a man as minister strictly on a political basis once but if he is sent abroad a second time to represent this country, it is safe to assume that his early record was most satisfactory. Such is the case with E. E. Brodie, publisher of the Morning Enterprise at Oregon City and former minister to Siam, who is being sent to Finland by President Hoover. Mr. Brodie spent four years in the Orient and returned with an excellent reputation in the diplomatic service. Both as a successful business man and as a keen student of public affairs he is well fitted to represent this country in a foreign capital. There is no doubt of his success but the appointment means a loss to Oregon for several years. He will be greatly missed by his many friends in the newspaper fraternity.

THE GREATEST ENGINEER OF ALL

Since we live in an age that leans more heavily each year on its engineers, Dean Carl T. Humphrey of the School of Technology at Villanova College decided the other day that it would be interesting to find out what man competent authorities considered the greatest engineer of all time.

The deans of all the engineering schools in the country, accordingly, were asked for their opinions; and they voted that the honor properly belongs to James Watt, who turned the steam engine from a toy into a useful machine.

From technical standpoints there may be reasons to disagree with this claim; but certainly, considering the thing in the light of the consequences that followed on his work, Watt seems eminently deserving of the honor.

We do not always realize the tremendous revolution in human affairs that followed on the development of the steam engine. Yet it was this invention that was responsible for nearly all of the changes that exist between the civilization of today and the civilization, for instance of 1776.

It was not alone that the steam engine made possible the railroad train and the steamship, thus obliterating distances and bringing all people into closer communication with one another. The factories that it produced turned society completely upside down, and by ushering in an entirely new set of social and economic conditions helped to change men's ideas of morality, customs, laws and politics in a startling manner.

If it had not been for James Watt and his steam engine, we would still be living under circumstances similar to those of the latter part of the 18th century. Other engineers may have had great technical skill, may have solved harder problems; but none had a greater effect on the life of the world. And that, after all, is not such a bad test.

INCOME TAX FACTS

INCOME TAX IN A NUTSHELL
WHO? Single persons who had net income of \$1500 or more, or gross income of \$3000 or more, and married couples who had net

income of \$2300 or more or gross income of \$5000 or more must file returns.

WHEN? The filing period ends March 15, 1930.

WHERE? Collector of internal revenue for the district in which the person lives or has his principal place of business.

HOW? Instructions on Forms 1040A and 1040.
