BY-PRODUCTS OF SCIENCE

Judged by its fruits, modern science may not be as magnificent an edifice as its builders have been fond of believing.

So, at any rate, says Professor Arthur H. Compton of the University of Chicago, winner of the Nobel prize for physics in 1927.

Professor Compton told a meeting of the American Physical Society in Washington the other day that splendid scientific achievements often seem to bring rather puny results.

For instance, consider the young people (and older ones, too) who fritter away the best part of the night and early morning hours dancing and dissipating to the tune of the cheap jazz that flows from a loudspeaker.

Is this what the great electrical pioneers were working for?

That question is something of a poser, but it can be duplicated with many other inventions, too.

The automobile is a marvel of mechanical ingenuity; but sometimes its chief results seem to be clogged highways, a rising toll of fatal accidents, and a deplorable tendency on the part of some youngsters, who ought to be home in bed, to find questionable amusements far away from parental restraints.

Moving pictures are a miracle of modern science, but some of the stuff that gets thrown on the silver screen today hardly seems worthy of the brilliance of the inventor.

Likewise, Mr. Bell's telephone is quite an invention; but did Mr. Bell ever dream of the hours upon hours of idle gossip that would be sent over the wires?

So it goes. If the present age has a genius for producing men who can accomplish the impossible, it also has a genius for debasing the miracles that these men produce, putting them to silly and inconsequential purposes.

However, that is not the whole story. Inane radio programs, cheap movies, moronic auto drivers, and telephone gossipers are, after all, only by-products.

The important thing is that these bright and marvelous new tools have been placed in our hands. We may misuse them for a while, and perhaps even cut ourselves with them, but once we learn how to handle them properly the scientists who brought them forth will be vindicated.

Consider the radio, for example. Some fearful trash does get put on the air; yet thousands of lives have been saved at sea by the radio.

The radio knife, recently perfected, has enabled surgeons to perform delicate operations with more ease and less risk than ever before.

Such results surely would satisfy Messrs. Franklin, Maxwell, Marconi, and DeForest.

Meanwhile we must put up with the less encouraging features. That is too bad, but it need not be disheartening.

You will find almost any neighborhood a good neighborhood if you are willing to be a good neighbor.

MILLIONS OF POUNDS USED BY OUR GOVERNMENT

Meier Announces Appointments To New Commissions

SALEM, June 5 (AP)—Fourteen appointments were announced yesterday by Governor Julius L. Meier, including members of the two new commissions created by the recent state legislature.

The century of progress commission, of which the governor is an ex-officio member, and which will handle Oregon's participation in the Chicago fair in 1933, will be composed of Samuel L. Garland, Lebanon; Raymond B. Wilcox, Portland; and Frank H. Ransom, of Portland.

John C. Veach, Portland attorney, was reappointed a member of the state fish commission, while Frank O. Berg, of Astoria, was reappointed a member of the state pharmacy board.

M. E. McKee, of Morrow, was named to succeed F. R. Peterson on the pharmacy board.

Arthur W. Lawrence, of the industrial accident commission, was appointed a member of the state apprenticeship committee, as provided for by the last legislature.

Dr. Harry E. Mannell, of Portland, was appointed to succeed Dr. Ethel R. Healy, of Hubbard, as a member of the state board of chiropractic examiners.

Eugene Woman Is Killed by Auto

EUGENE, Ore., June 5 (AP)—Mrs. L. M. Travis, head of a collection agency here, died yesterday from injuries received when she was struck by an automobile driven by Henry Beam, recently of Josephine county. Police said Beam drove through a stop street. He was being held in the city jail.

Beam said he did not see Mrs. Travis, who was crossing a downtown street. She suffered concussion of the brain and internal injuries. One of the wheels of the car ran over her body.

"Twenty Thousand Leagues Under the Sea," by Jules Verne, before starting the craft was overhauled, refitted and subjected to thorough diving and navigation tests.

Captain Bickel, Danenhower is in command. Other officers include Lieutenant Commander Isaac Schlosback, and Chief Engineer Ralph D. Shaw.

NEW LAWS GO INTO EFFECT AT MIDNIGHT

(Continued from Page One)

referendum moves, and two of these laws have been delayed as a result until the next general election.

The two against which referendum moves have been successful are the closing of the Rogue river to commercial fishing, and the 10 cent tax on oleomargarine. They will be submitted to a vote of the people.

Two other bills on the educational appropriation, and the other on the state police bill, may be completed before tomorrow. Only one of these effects laws becoming operative at this time.

The state police bill, should the move to refer it fail, would not become operative until August 1.

The fifth referendum, against closing parts of the McKenzie river to fishing from boats, is expected to fail.

A total of 403 bills were passed by the legislature and signed by the governor. Two of these however covered the same subject and are represented in the statutes by two separate chapters.

Sixty-four of the measures bore the emergency clause and became effective immediately upon their approval by the governor.

upon their approval by the governor.

Most of these were appropriation measures. Of the remaining 340 two, the oleomargarine tax and the Rogue river fishing bill—have been held up by referendum and two others by their own provisions, do not become effective until a later date.

New Speed Law

Among the more important new laws is the "Rule of the Road," which not only lifts the 38-mile an hour speed limit, but provides for the three-arm signal system, and uniform provisions for observance of traffic regulations generally.

One phase of the new traffic code, providing for drivers' license applicants examinations, does not become operative until July 1.

Three of the 336 new laws are repealing acts. Two repeal the so-called baby acts of the 1929 session, placing property qualifications on voters at elections involving bond issues or tax levies.

The other repeals the "conflicting and unnecessary" act relating to the operation of public utilities.

Another important law changes the personnel of the state emergency board and limits the amount of money that can be appropriated by this body during the biennium.

Intangibles Outstanding

To tax payers, the outstanding piece of legislation is perhaps the intangibles tax act. This is largely a revamping of the act of 1929 which was held up by the state supreme court.

The new act increases the rate from 5 to 8 per cent, and is said to overcome the legal objections to the former act. This tax is estimated to yield \$1,600,000 to the state treasury as an offset to the present tax paid by real property.

The tax to be collected this year will be on interest and dividends accruing during 1930.

The income tax law which the public must pay along with the intangibles tax by June 25, was an initiative measure passed by the people last November.

The peoples utility district bill, sponsored by the state senate, and regarded as a part of the administration program along with the utilities commission bill and the hydro-electric act, also becomes effective at this time.

The other two laws carried the emergency clause and have been operative since February. The grants to be provided for the organization of districts, somewhat similar to super-highway districts, for the promotion of power plants financed, owned and operated by the people of the district.

The free text-book bill is another measure of state-wide interest to go into effect with the lapse of the 90-day period of grace. Under this act school districts throughout the state will be required to undertake

Fire Chiefs Of Oregon Meeting At State College

CORVALLIS, Ore., June 5 (AP)—Rev. Francis P. Leipsig, pastor of the Eugene Catholic church, was yesterday elected to honorary life membership in the Oregon Fire Chiefs' association at the second day of the annual convention and firemen's school now being held at Oregon State college.

Father Leipsig, formerly of Corvallis, has been active in civic work favored by firemen, and yesterday delivered a personal eulogy in memory of the late Chief Tom Graham of Corvallis.

The possibility of effective rural fire control was reported by Chief W. P. Vandervelden of Forest Grove, in an address yesterday in which he explained how his department handles all rural calls and has not lost a single roof fire within five miles of the city in the past five years.

He described three methods of financing special rural equipment aside from use of the new law for fire protection districts. He quoted statistics showing that rural fire losses in Oregon last year averaged 57 per cent of value of property affected, while in cities the loss was less than 10 per cent.

Paul X. Knoll, conducted the first of a series of public speaking sessions yesterday and Dean Roy D. Hewitt, Willamette university, explained laws relating to arson.

Election and installation of officers was held last night.

WHEAT CROPS NOT YET BEING MOVED

(Continued from Page One)

grain elsewhere were denied today by the minister of agriculture who said no new measures regarding wheat imports had been taken.

It is not for the government to decide where France shall buy her wheat, he said.

Kentucky's wheat crop will show an increase over last year, May 1 estimates indicate.

TAKE THIS TIP—Borden's is better in Chocolate Pudding

TAKE the word of a woman who's famous for her chocolate puddings—Borden's gives better flavor, richer texture, than any other evaporated milk you can buy.

This famous milk—tested by the severest tests the milk industry has ever evolved—will never fail you. It's better for cooking, better for coffee.

It's better and you can prove it!
