OUT OUR WAY

BORN THIRTY YEARS TOO SOON

Fear the Lord, and serve him in truth with all your heart: for consider how great things he hath done for you.—1 Samuel 12: 24.

WOMEN AND DISARMAMENT

Appointment by the Canadian government of Miss M. W. Kydd, president of that country's National Council of Women, as a member of the dominion's delegation to the Geneva conference follows a precedent set by President Hoover when he made Dr. Mary Woolley a member of the American delegation. The British did likewise by designating Mrs. Margery Corbett Ashby an alternate in the delegation from England.

Woman has much at stake at Geneva and had she not been granted representation she would have been justified in demanding it. Her presence there should have a beneficial effect, advancing appreciably the cause of disarmament and world peace.

This action of three nations in including women in their delegations is indicative that woman's influence will be mobilized as never before at an international gathering to promote the work of the conference. One senses a connection between these appointments and the establishment of an alignment between the international disarmament committee and thirteen organizations of women, most of them international, for the purpose of backing the efforts of the committee at Geneva.

Success at Geneva will depend largely on the effectiveness with which the sentiment of the masses of the people in every country for relief from the burdens and perils of competitive armament can be brought to bear upon the conference. Help from the women of the world is essential to its effectiveness.

ROAD TO SUCCESS

In the attainment of solid, well-founded success there has never been found a substitute for honest labor with the hands or mind. The ages have recognized this as an immutable truism; yet every age, including the present, has had its skeptics and unbelievers; its seekers after fame and fortune without paying the price in work.

Some sage has said that to attain success use half as much effort as you would exert in attempting to seek success without work. Legitimate achievement requires no fortifications, no protections.

It is a gross injustice to humanity to say that if there is any one thing, more than another, that enlists very much of the attention, time and effort of the people it is in scheming and planning to get something of value for nothing. The number of society's parasites is large but the number of honest, hard-working supporting pillars of society is preponderantly larger.

Senator Borah has offered a bill to cut federal salaries that are now over \$5,000. Now if some of our legislators would decide to cut taxes, we would all feel much better toward governmental agencies.

The man who thinks that he has reached the end of his rope can still tie a knot and hang on.

"It is said" does not make it reliable information.

Railways To Take Up Oregon's Land Settlement Work

PORTLAND, Ore., (Special) — W. P. Turner, president of the Spokane, Portland & Seattle railway system, announces, effective at once, the establishment of a new department to handle land settlement and immigration work along the company's lines in Oregon and Washington.

This new department will be consolidated with the agricultural and livestock work handled by Kenneth C. Miller, and will handle all local contacts, correspondence and follow-up work of the inquiries received by its parent lines, the Great Northern and Northern Pacific. These lines each receive from 250 to 1000 inquiries per month for literature or information concerning Oregon, and in the past they have all been referred to the Oregon state chamber of commerce.

The department will co-operate closely with the chambers of commerce and real estate men along the company's lines, which include the Spokane, Portland & Seattle railway in both Oregon and Washington; the Oregon Trunk railway in Central Oregon; the Oregon Electric railway in the Willamette valley, and the United railways west of Portland.

In sections where there are no organizations or where there are special projects, properties will be listed directly.

Healthful Humidity
Humidity in houses should be from 30 to 50 per cent, but in most houses it is probably 20 per cent or lower—too dry for health. The drier the air the more difficult it is to heat a house, as moisture in the air carries and retains heat. If frost forms freely on the inside of the glass, there is probably enough humidity. If there is no sign of frost, the air is too dry.

Louis XIV Sent La Salle
No less a personage than Louis XIV of France sponsored the exploration of the Great Lakes. His royal command sent out La Salle, whose first ship followed Lake Erie to Detroit, Lake Huron to Mackinac Island and Lake Michigan to Chicago.

By J. R. Williams

tact by wash cloths, towels or anything that comes in contact with the sore. Epidemics of impetigo are frequently excited through the exchange of clothing and the common use of towels, swimming suits and sweat shirts. It is very contagious. A child who has the sores should be excluded from school and special care must be exercised to prevent the spread of the disease in the home.

The disease is very easy to cure and to prevent. The only cases which are troublesome after they are recognized are those which are produced by scratching or resulting from some irremovable and undiscernible cause. The treatment is simple and effective. The crusts can be removed by soaking in sterilized olive or cotton seed oil until they are easily detached. After the removal of the crusts application should be made twice daily of mild ammoniated mercury ointment. This will complete the healing in a few days leaving only the after-redness which in time gradually disappears. Absolute cleanliness is the great preventive and cure. The avoidance of the common use of hair brushes, combs, caps, towels, and the application of common sense sanitary precautions will practically prevent the extensive introduction of the infection into a community.

In Washington

By Herbert Plummer
WASHINGTON — These are busy days for a bespectacled young chap in the house who is charged with the duty of keeping Speaker Jack Garner and other presiding officers in the middle of that sometimes treacherous parliamentary road.

Lewis Deschler, just past 30, is the right hand man for Garner and other temporary presiding officers of the house. It's up to him to see that the correct words are put into their mouths at the proper time.

With the political division so close as it is in this congress, the parliamentarian must be constantly on his toes.

It is very easy for the house to get into a parliamentary tangle. There are those in the house—notably the "progressive bloc"—who rely on their knowledge of the rules to gain advantage.

Correct rulings from the chair must at times be made quickly. It's Deschler's job to see that the chair is in a position to do so.

He Whispers Advice
He is always within a few feet of the speaker's dais, where his whispered advice may be heard easily by the chair. Often before a member has completed his appeal for a ruling Deschler has begun this whispered advice.

And he remains ever alert at his post until the storm has subsided. Deschler has been house parliamentarian for more than four years. Speaker Longworth appointed him to succeed Lehr Fess, the son of the United States senator from Ohio. He had been Fess' assistant.

Before that he was a timekeeper in the house.

He has been a student of parliamentary law for years, becoming interested in it by observing how important a part it played in house procedure. When young Fess decided to resign, Longworth called him in one day and told him if he would learn all he could, when the place became vacant he would give him a try at it.

Deschler made good and now is admitted by expert parliamentarians in the house to be one of the best men for the job the house has had.

Arduous Task
When he is not on the floor, Deschler may be found in the speaker's rooms, just across the hall. His desk is in a corner and is littered with all sorts of books on rule and parliamentary law.

Not far away are the chambers of the supreme court, where he must go frequently to look up decisions affecting some parliamentary question.

He has been known to work all night long on a problem which the speaker might be called on to settle the next day.

"I've worked all night to get a decision ready by the time the house meets the next morning and they have the pleasure of seeing the point never raised," he says.

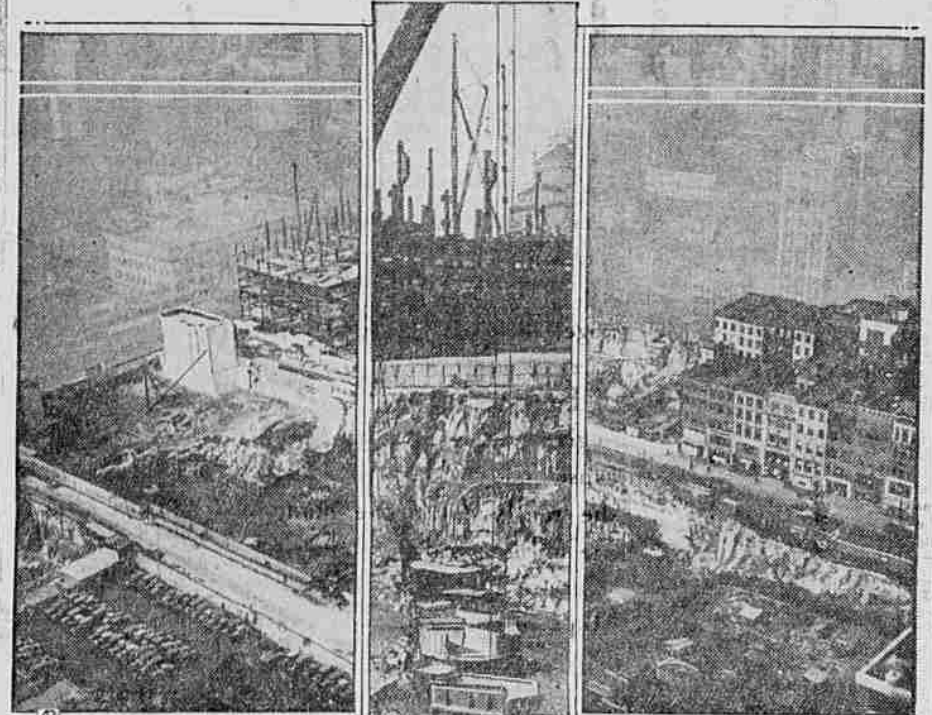

"This job is like that."

Fast-Growing Tree

Steel Beams Of Radio City Push Way Skyward As \$250,000,000 Project Starts Taking Form

The heart of New York's Fifth avenue is resounding with the noise of steel workers, steam shovels and excavators as the \$250,000,000 Radio City starts taking form. The construction enterprise, rated as the world's largest similar project, is fostered by John D. Rockefeller Jr. Above is a general view of the section showing how work is progressing. In center is shown a closeup of the work, revealing the great depth of rock which excavators cut through for the foundation.

By C. E. Butterfield (Associated Press Radio Editor)
NEW YORK (AP)—From out of great, gaping excavations, spreading over three city blocks, in the heart of exclusive Fifth avenue, massive steel columns have begun to rear themselves into the air.

That's the beginning of the unofficially titled Radio City, 25 per cent of which is to be occupied by the radio group. Within four years it is to be completed and in full operation, the planners say.

The steel now going into place will be the skeleton of International music hall, one of two theatres and one of 11 buildings that ultimately will comprise this \$250,000,000 project fostered by John D. Rockefeller Jr.

Rated as the world's largest single building enterprise ever attempted, to have when finished approximately 3,800,000 square feet of floor space, it is to offer something new in the way of dining salons.

It has just been announced that the latest plans include the incorporation of such a building to be known as the grand or international forum, whose designers could find no other word to describe than "gorgeous."

Containing terraced dining spaces that stretch from subway level almost to a 60-foot dome on the fourth floor, this structure is to be the companion building to the theatres which are going in on either side of it at the Sixth avenue approach to Radio City.

The forum is to incorporate both European and American architectural ideas and be so large that 1800 guests can be comfortably seated at the numerous tables.

There'll be a dance floor and a concert stage. It will have one of the three massive pipe organs to be installed in the city.

Decorations are to be everything that the interior artists can devise, with the embellishments to include 1000 uniformed page boys to care for the needs of the guests. An orchestra will be present, with facilities to be included to pick up outstanding broadcasts.

The city is being laid out so that every path will lead to the forum, which in turn will be connected to either theatre by subway passages. Stairways 25 feet wide will add to the impressiveness.

To the north of the site of the forum the international music hall,

which is to comprise a part of a 31-story office building, is offering the first concrete evidence of the fact that a thousand men already are at work at the city. Ultimately this number will be increased to 5000 or 6000.

The theatre is to be devoted exclusively to feature stage productions, while that on the south side of the forum is to be called the sound movie house, with film projection as the attraction.

The main building of Radio City, 70 stories high, plans for which call for 2,750,000 square feet of floor space, is expected to be the largest in the world, even outrating the Empire State, which holds the record as the tallest.

Tentative plans provide that the cornerstone laying ceremonies for it will be held next May, with completion set for some time in 1933.

The first unit to be finished, the International Music hall, is expected to be ready this fall.

The project as yet has no official name. It has been called Radio City, Rockefeller City and Metropolitan Square. However, it now generally is called Radio City.

Health

CONTAGIOUS SORES
(By Dr. Frederic Stricker)
What is commonly called contagious eruption, barber's impetigo, foot-ball impetigo, bath-house impetigo is scientifically known as impetigo contagiosa. In early days the formation of pus in the skin was regarded as a special disease to which the term impetigo was applied. Impetigo contagiosa is one of the most frequent and most contagious skin diseases found in young school children. It is very common in the rural schools of this state and the city schools are not entirely free from this troublesome infection. The eruption is most frequently seen on the face and generally comes under observation as a collective yellowish crust, which appears as if "stuck on." Careful observation will disclose the earliest state of the eruption. The eruption begins as a tiny blister which enlarges to the size of a split pea or larger. This blister fills with pus, then breaks, and as it dries forms a yellowish crust. The outer edge of the crust tends to cup up. Larger blisters of impetigo result from the confluence of several smaller blisters. The discomfort, slight itching and stinging induce rubbing and scratching and consequently rupture of the thin roof of the blister; whereupon serum freely exudes, and though the face is the foremost site of the eruption the infection is carried by the infected finger nails to distant parts of the body, and new crops of pustules may appear on the hands, arms, legs or body. The only part of the body that escapes is the space between the shoulder blades, since it cannot be reached with the finger nails. On the face and around the mouth and nose the crust forms wreath-like figures.

The course of the disease is indefinite. A single patch will disappear in seven to ten days if no new inoculation occurs, but the disease will continue as long as inoculation takes place. It frequently continues for weeks and even months and becomes extensive where its character is not recognized and proper treatment is not instituted. It occurs most frequently in the poor and uncleanly but is not confined to any class of society. All that is required for its production is the broken or abraded skin and the presence of pus organisms. It is frequently caused in men by the abrasions produced by shaving. The disease is spread from one person to another through direct contact.

STOP THAT COLD

DISTRESSING cold in chest or throat—that so often leads to something serious—generally responds to good old Musterole with the first application. Should be more effective if used **once every hour for five hours.** This famous blend of oil of mustard, camphor, menthol and other helpful ingredients brings relief naturally. Musterole's action because it is a scientific "counter-irritant"—not just a salve—it penetrates and stimulates blood circulation; helps to draw out infection and pain. Used by millions for 20 years. Recommended by doctors and nurses.

To Mothers—Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

KLAMATH WEATHER UNSETTLED

KLAMATH FALLS, Ore., Jan. 28 (AP)—A continuation of unsettled weather was predicted for the Klamath country today. Snow flurries and squalls marked Wednesday's weather. About two inches of snow has fallen here since Tuesday night and the dry, feathery flakes began falling at daybreak today. The minimum temperature this morning was 18 degrees.

BRONKEY'S CONDITION IMPROVED
PORTLAND, Jan. 28 (AP)—Improvement in the condition of Ed Bronkey, Mt. Angel farmer, who was injured in an automobile accident near that town Wednesday, was seen by attendants at St. Vincent's hospital here today. His nurse said he rested comfortably after midnight, and is conscious.

The nature of his injuries had not been determined this morning, but an X-ray examination was to be made during the day. A superficial examination at the scene of the accident disclosed he suffered a fractured leg and possible injuries.

Record Track-Laying

It is said that the track-laying record, made April 29, 1893, in the construction of the Central Pacific—10 miles and 200 feet of track laid between 7 a. m. and 7 p. m., with a noon rest of one hour—has never been equaled.

Menus Of The Day

By Mrs. Alexander George
A DINNER MENU
Macaroni and Cheese
Buttered Green Beans
Bread Butter
Head Lettuce and Piquant Dressing
Steamed Prune Padding
Lemon Sauce
Coffee or Tea

Macaroni And Cheese For 6
3 cups cooked macaroni.
4 tablespoons butter.
6 tablespoons flour.
3 cups milk.
2-3 cup cheese.
1 teaspoon paprika.
1/2 teaspoon celery salt.
2 tablespoons chopped onions.
2 tablespoons chopped green peppers.
2-3 cup crumbs.
2 tablespoons butter, melted.
Melt 4 tablespoons of butter and add flour. When blended add milk and cook until creamy sauce forms. Stir constantly. Add cheese and seasonings and beat 1 minute. Add macaroni and pour into buttered baking dish. Cover with crumbs which have been mixed with two tablespoons of melted butter. Bake 25 minutes in moderate oven.

Piquant Dressing
(For lettuce salads)
1/2 cup French dressing.
1/4 cup chopped olives.
1/4 cup chopped pickles.
1 tablespoon horseradish.
2 tablespoons catsup.
Mix ingredients. Chill and serve.

Steamed Prune Padding
1 cup sugar.
1 cup flour.
2 teaspoons cinnamon.
1 teaspoon cloves.
1/4 teaspoon salt.
1 teaspoon soda.
2 cups cooked seeded prunes.
2 eggs.
1/2 cup fat, melted.
1 teaspoon vanilla.

2-3 cup sugar.
1 teaspoon flour.
1/2 teaspoon salt.
1 1/2 cups water.
4 tablespoons lemon juice.
1 tablespoon grated lemon rind.
1 tablespoon butter.
Blend sugar, flour and salt. Add water and juice. Boil gently 2 minutes. Stir constantly. Add rest of ingredients. Mix well and serve sauce warm or cold.

To clean stained vinegar crusts soak for half an hour in 1 cup of hot water to which 2 teaspoons of soda have been added. Rinse well and wash out in hot soap suds.
