

Elimination Of Grating, Melting One of Features

The eliminating of grating and melting in chocolate recipes is one of the features of Miss Margaret Coates' lectures and demonstrations in connection with the Safeway cooking school. "I have found a chocolate that is a chocolate and that nevertheless comes in powdered form," said Miss Coates.

"I am going to try and show the difference between chocolate, cocoa, and ground chocolate, in my lectures," Miss Coates said. "Chocolate is the refined substance of the cocoa bean, containing all of its natural fat," she continued, "while cocoa is the same substance after most of the natural fat has been removed. Ground chocolate stands between the two in fat content, having less than solid chocolate and more than cocoa." Miss Coates uses Ghirardelli's ground chocolate exclusively in all her chocolate cooking and will show its use in connection with the cooking school, both for making chocolate beverage and for other cooking and baking uses.

As a special souvenir to those who attend the cooking school, the famous Sweet Sixteen Recipe Packet in the current edition will be supplied by D. Ghirardelli Co. for each cooking school visitor. This recipe packet has a romantic history in that it was originally developed from the long series of prize winning recipes in the files of the D. Ghirardelli Co.

Miss Coates emphasized that Ghirardelli's ground chocolate is much richer than cocoa and still not overly rich. "This makes it possible to add the chocolate with the other dry ingredients in baking," said Miss Coates. "Being a blended product, it has the full chocolate flavor richly developed from various strains of high grade cacao beans."

THIS CURIOUS WORLD

A GIRAFFE HAS ONLY SEVEN VERTEBRAE, ONE HALF AS MANY AS A HUMMING BIRD.

YOUNG DUCKS ARE BORN-SWIMMERS, BUT YOUNG SWANS HAVE TO BE TAUGHT BY THEIR MOTHERS.

A HANDFUL OF AMERICAN POTATOES, SENT TO CHINA SOME YEARS AGO, SAVED THE LIVES OF A MILLION CHINESE IN THE FAMINE OF THE PAST FEW YEARS.

ALMOST ALL MAMMALS have seven neck bones. In long-necked animals, the vertebrae are merely longer than those of short-necked animals. A giraffe has no more than a whale. In birds, however, the number is more variable. Humming birds have 14 to 15 neck vertebrae, ducks 16 or 17, and swans 25.

IN 1903, William W. Simpson, a missionary in China, wrote to friends in the United States for potatoes with which to develop the American potato in China. A handful of Green Mountain potatoes were sent over, and it is estimated that a million Chinese were saved from starvation by eating the descendants of those first few tubers.

ST. LOUIS (AP)—The landlady in a rooming house on Washington avenue is worried about that hole in the bathroom wall.

And her worries may be well founded for two circus performers, Mr. and Mrs. Dee Aldrich, say their two pet pythons, 12 and 14 feet long, disappeared through that hole and have taken up their abode among the joists of the house. "We put the snakes in the bath tub to bathe them and then went out to lunch," the performers relate. "When we returned they were gone. Where else would they have gone but into that hole?"

Snakekeepers from the St. Louis zoo viewed the hole and sighed for a Pied Piper who knows how to call snakes.
