## Space Doctor Says American Astronauts Ready For Travel

ROME (UPI)—A leading American space doctor said today any one of the seven U.S. astronauts can take off for outer space "tomorrow"—providing a space vehicle is ready.

Dr. Siegfried J. Geratwohl made the statement in commenting on a Russian scientist's remark Thursday that a Russian now is ready to be launched into space.

"We have a man ready, too," said Geratwohl. "In fact, seven of them. Any one of our astronauts could be sent up tomorrow on sub-orbital or short orbital flights if the vehicle were ready."

Geratwohl, of the bio-astronautic research office, U.S. Army Ballistic Missile Agency, defined "short orbital flights" as those involving "one or two orbits around the earth, for a few hours run in space."

Geratwohl would not say whether he thought the United States would beat Russia in the

space race but he said "I think it won't be very long before they launch their first man into space."

The American scientist commented that "It is very often said that the medical people are behind the engineers in space travel, but I doubt that."

"We know today what man can stand in space," he said. "Now it is up to the engineers to provide systems under which man can survive."

## Challenges Russ Scientists

Geratwohl interrupted a paper he was delivering to the World Congress of Aviation and Space Medicine to challenge Soviet scientists to take part in a free exchange of information on space research.

He said the Russians had supplied data on some high-flying rocket experiments with animals that stayed up only a few minutes, but had withheld information on Laika, the dog that stayed aloft in Sputnik II "for hours."

"The data on Laika, which we still do not have, is very important to us," Geratwohl said.

## Workman's Leg Is 'Grafted' Back After Limb Nearly Off

CASTRO VALLEY, Calif. (UPI)—A team of surgeons has grafted back a workman's right leg which was almost severed in an industrial accident, it was disclosed today.

The victim, Billy L. Smith, 25, is at Hayward, Calif., recovering in Eden Hospital here from the accident, which occurred three months ago.

Dr. Elmer O. Masman, director of the hospital, said that Smith will be able to walk again within a few months, although his right leg will be two inches shorter than his left because of bone and tissue damage suffered in the accident.

The doctors agreed that the operation apparently is the first of its kind in recorded medical history. They added, however, that it bore "little resemblance" to a Russian doctor's plan to graft the leg of a dead person on a 20-year-old girl whose leg was amputated.

The doctors who performed the feat, a Hayward orthopedic surgeon and an Oakland, Calif., vascular surgeon, insisted their names not be used in news dispatches.

However, Masman related this account of the accident and operation: Smith was working at the steel door of a furnace in the U. S. Pipe and Foundry Co. plant in nearby Decoto when the heavy steel hook of a traveling crane hurtled down on him.

Held Together by Skin The hook smashed his right leg against the furnace door, crushing through the bone and flesh above the knee.

When the company doctor reached him, Smith's leg was attached to his body only by a bit of skin. Doctors said the connecting skin was valueless, and could have been snipped away without affecting the subsequent operation. The company physician applied a tourniquet to the bleeding stump and sent Smith to the Eden Hospital.
