

Wife is blindsided by news of husband's past romance

DEAR ABBY: My husband, "Bill," and I have been happily married for 22 years and have two very active, beautiful children. Our oldest daughter has been playing on a traveling soccer team for the last five years. Bill and I go all over the country to watch her play and have become very close to the head coach, "Marla," and her family.

I recently learned through another parent that Bill dated Marla for three years prior to us getting married. This parent informed me the relationship between Bill and Marla was so serious they had discussed marriage.

When I heard it, I was very upset. I couldn't understand why my husband would keep that information from me all this time. When I asked him, he said it was true, but he hadn't felt it had been necessary to tell me.

Bill hasn't always been the greatest communicator, but I think this has crossed the line. I feel I have been misled and lied to. He acted as if he had never even met her. It makes me wonder how many other secrets he's hiding from me.

I'm having a hard time trusting him now, and I feel there's something seriously wrong with our relationship. I'm also uncomfortable around Marla and her family. I wonder if her husband knows about their relationship. Do I have the right to be upset about this situation?

— KEPT IN THE DARK

DEAR KEPT: You have the right to be upset -- and angry -- about the deception. If you want to know if Marla's husband knows what went on between her and your husband, ask her. Perhaps she can fill you in on what else your husband "forgot" to mention.

Bill appears to have a large character flaw, and the two of you appear to have a serious communication problem. Before this damages your marriage further, you and Bill should schedule some sessions with a licensed marriage and family therapist.

DEAR ABBY: My aunt and uncle from another state still send me a birthday check every year for my birthday, which is generous and thoughtful of them. While the sum is not large, I feel it is not necessary, and it makes me uncomfortable. I'm in my late 20s now and have a good job with a good income.

How do I politely tell them that while I appreciate their kindness, it is not necessary to send their adult niece a check every year? I'm not particularly close with them and am afraid of offending.

— UNCOMFORTABLE IN MICHIGAN

DEAR UNCOMFORTABLE: From your description of your aunt and uncle, they are thoughtful, caring people, so when you talk to them, express your gratitude for their generosity. Then suggest that because you are now an adult, with a good job and a good income, you think it might be time to consider exchanging only greeting cards on special occasions. Of course, this means you will be sending them cards for their birthdays, anniversary and Christmas, if you don't already do it.

DEAR ABBY: Two years ago, my son and his family moved a couple of hours away. He's my only child. I know he's busy with his wife, two children and his job, but I would like to hear from him more than every two weeks -- or longer. He told me I could call him, but I feel like I'm imposing. I would also like to be closer to my daughter-in-law. We have had a couple of good phone conversations recently, but I sense that she wants her own space.

I'm not an overbearing person, and I'm working on expectations vs. reality, being overly emotional when my expectations are not met and fear of sharing these emotions because I'm afraid my son and his wife won't like what I have to say.

What can I do, other than wait for them to call and work on how not to get upset when they don't include me?

— WORKING ON IT

DEAR WORKING ON IT: Your son has told you it's all right to call him, so you should. Because of the blessing of modern technology, there are other options as well -- texting, video chat, etc. Be grateful your son and his family are independent, and try harder to fill more of your time with hobbies and interests of your own. If you do, you will be a more interesting person to be around. Your son and his wife should not be the focus of your life the way he was when he was a child and you were responsible for him.

A warmer world makes hurricanes wetter and increasingly intense

Associated Press

WASHINGTON — A warmer world makes for nastier hurricanes. They are wetter, possess more energy and intensify faster.

Their storm surges are more destructive because climate change has already made the seas rise. And lately, the storms seem to be stalling more often and thus dumping more rain.

Study after study shows that climate change in general makes hurricanes worse. But determining the role of global warming in a specific storm such as Hurricane Florence or Typhoon Mangkhut is not so simple — at least not without detailed statistical and computer analyses.

The Associated Press consulted with 17 meteorologists and scientists who study climate change, hurricanes or both. A few experts remain cautious about attributing global warming to a single event, but most of the scientists clearly see the hand of humans in Florence.

Global warming didn't cause Florence, they say. But it makes the system a bigger danger.

"Florence is yet another poster child for the human-supercharged storms that are becoming more common and destructive as the planet warms," said Jonathan Overpeck, dean of the environment school at University of Michigan. He said the risk extends beyond the Atlantic Ocean, such as Typhoon Mangkhut, which hit the Philippines on Friday.

For years, when asked about climate change and specific weather events, scientists would refrain from drawing clear connections.

But over the past few years, the new field of attribution studies has allowed researchers to use statistics and computer models to try to calculate how events would be different in a world without human-caused climate change.

A couple of months after Hurricane Harvey, studies found that global warming significantly increased the odds for Harvey's record heavy rains.

"It's a bit like a plot line out of 'Back to the Future,' where you travel back in time to some alternate reality" that is plausible but without humans changing the climate,

said University of Exeter climate scientist Peter Stott, one of the pioneers of the field.

A National Academy of Sciences report finds these studies generally credible. One team of scientists tried to do a similar analysis for Florence, but outside experts were wary because it was based on forecasts, not observations, and did not use enough computer simulations.

As the world warms and science advances, scientists get more specific, even without attribution studies. They cite basic physics, the most recent research about storms and past attribution studies and put them together for something like Florence.

"I think we can say that the storm is stronger, wetter and more impactful from a coastal flooding standpoint than it would have been BECAUSE of human-caused warming," Pennsylvania State University climate scientist Michael Mann wrote in an email. "And we don't need an attribution study to tell us that in my view. We just need the laws of thermodynamics."

Georgia Tech climate scientist Kim Cobb looks not just at basic physics but all the peer-reviewed studies that especially link climate change to wetter storms.

"We have solid data across decades of rainfall records to nail the attribution — climate change is increasing the frequency of extreme rainfall events," Cobb said.

Several factors make scientists more confident in pointing the climate-change finger at Florence.

For every degree the air warms, it can hold nearly 4 percent more water (7 percent per degree Celsius) and offer measurably more energy to goose the storm, scientists said.

"The amount of water that comes out of hurricanes is certainly the most robust connection that we have," National Oceanic and Atmospheric Administration climate scientist Jim Kossin said.

And to look at Florence specifically, "it's very likely that climate change has warmed the ocean such that the hurricane's intense rainfall is more destructive than without global warming," said Weather Underground Meteorology Director Jeff Masters, a former hurricane hunter.
