

# Live-in boyfriend shames woman for being a mother

**DEAR ABBY:** I am a divorced mother of two teenagers. I've been seeing my boyfriend, "Sean," for almost five years, and when the pandemic started, he moved in with us. I am supposed to share custody of my teens with their father, alternating weeks. However, his job requires travel, and the kids are with me more often than not, with little to no notice. They are also reaching an age where they don't really want to go to their dad's all the time.

This has caused some tension with my boyfriend. He feels we never get "alone time" anymore. He then withholds affection from me, as if I've done something wrong by having my kids. Since he moved in, our sex life has dwindled to almost nonexistent. He refuses to be intimate when the kids are home, yet he hasn't made the most of the "alone time" we do have when the kids aren't here. He usually goes to bed early, without so much as a goodnight kiss. Or he'll go out on weekend days and not include me.

I have been cheated on in the past, and my insecurities are starting to rear their ugly heads. I don't know how to talk to him

because he gets defensive and gaslights any issues I bring up. I don't feel safe sharing my hurt with him, let alone sharing my anger at him for trying to make me feel bad for being a mom. I'm losing hope and feel myself shutting down. How can I approach him in a way that he won't get defensive? — **FIGHTING A LOSING BATTLE**

**DEAR FIGHTING:** There are red flags all over your letter. You are going to be an active mother until your children are at least 18. That this man would move into your home and give you heartburn about your responsibilities is terrible. You state that your sex life is over, and when you raise other important issues, he gaslights

you. This does not bode well for a healthy future. His defensiveness when you attempt to have an adult discussion with him isn't your real problem. Getting him out of your home and your life before he wastes any more of your time is what you should focus on. **DEAR ABBY:** What is proper etiquette when attending an event and sitting at a table with more than six people? I think it's rude to talk to a person across the table. Talking to a person next to you is acceptable. Talking to someone across the table is rude because the other diners must stop talking to the person seated next to them and be forced to listen to your conversation. Seeing this happen

is becoming more and more annoying. What do you think? — **FORCED TO LISTEN**  
**DEAR FORCED:** While that rule of etiquette may have been true in Edwardian times, table etiquette today is no longer so rigid. While, of course, it is desirable to converse with the guests seated next to you, unless communicating with someone across the table requires one to shout — which would be distracting and disruptive — I see nothing rude about it.

## NEWS OF THE WEIRD

# Cambodian catches world's largest recorded freshwater fish

By **JERRY HARMER**  
The Associated Press

**BANGKOK** — The world's largest recorded freshwater fish, a giant stingray, has been caught in the Mekong River in Cambodia, according to scientists from the Southeast Asian nation and the United States.

The stingray, captured on June 13, measured almost 13 feet from snout to tail and weighed slightly under 660 pounds, according to a statement Monday by Wonders of the Mekong, a joint Cambodian-U.S. research project.

The previous record for a freshwater fish was a 646-pound Mekong giant catfish, discovered in Thailand in 2005, the group said.

The stingray was snagged by a local fisherman south of Stung Treng in northeastern Cambodia. The fisherman alerted a nearby team of scientists from the Wonders of the Mekong project, which has publicized its conservation work in communities along the river.

The scientists arrived within hours of getting a post-midnight call with the news, and were amazed at what they saw.

"Yeah, when you see a fish this size, especially in freshwater, it is hard to comprehend, so I think all of our team was stunned," Wonders of the Mekong leader Zeb Hogan said in an online interview from the University of Nevada in Reno. The university is partnering with the Cambodian Fisheries Administration and USAID, the U.S. government's international development agency.

Freshwater fish are defined as those that spend their entire lives in freshwater, as opposed to giant marine species such as bluefin tuna and marlin, or fish that migrate between fresh and saltwater like the huge beluga sturgeon.

The stingray's catch was not just about setting a new record, he said.

In this photo provided by Wonders of the Mekong taken on June 14, 2022, a man touches a giant freshwater stingray before being released back into the Mekong River in the northeastern province of Stung Treng, Cambodia. A local fisherman caught the 661-pound stingray, which set the record for the world's largest known freshwater fish and earned him a \$600 reward.

"The fact that the fish can still get this big is a hopeful sign for the Mekong River," Hogan said, noting that the waterway faces many environmental challenges.

The Mekong River runs through China, Myanmar, Laos, Thailand, Cambodia and Vietnam. It is home to several species of giant freshwater fish but environmental pressures are rising. In particular, scientists fear a major program of dam building in recent years may be seriously disrupting spawning grounds.

"Big fish globally are endan-

gered. They're high-value species. They take a long time to mature. So if they're fished before they mature, they don't have a chance to reproduce," Hogan said. "A lot of these big fish are migratory, so they need large areas to survive. They're impacted by things like habitat fragmentation from dams, obviously impacted by overfishing. So about 70% of giant freshwater fish globally are threatened with extinction, and all of the Mekong species."

The team that rushed to the site inserted a tagging device near

the tail of the mighty fish before releasing it. The device will send tracking information for the next year, providing unprecedented data on giant stingray behavior in Cambodia.

"The giant stingray is a very poorly understood fish. Its name, even its scientific name, has changed several times in the last 20 years," Hogan said. "It's found throughout Southeast Asia, but we have almost no information about it. We don't know about its life history. We don't know about its ecology, about its migration patterns."

Researchers say it's the fourth giant stingray reported in the same area in the past two months, all of them females. They think this may be a spawning hotspot for the species.

Local residents nicknamed the stingray "Boramy," or "full moon," because of its round shape and because the moon was on the horizon when it was freed on June 14. In addition to the honor of having caught the record-breaker, the lucky fisherman was compensated at market rate, meaning he received a payment of around \$600.
