

AG WEST SUPPLY
IS EXCITED TO ANNOUNCE

A BETTER WAY: MyWay RTK

Today's agriculture industry is all about progress. It's about looking across a field and seeing precise, crisp rows of crops. Progress is not having to worry about the weather interfering with signals. Progress is less stress with more simplicity. MyWay RTK is the new definition of progress in precision planning and AG West Supply is one of the first in the area to offer it.

MyWay RTK technology works with what local leaders in agriculture need to stay on top of in the farming game.

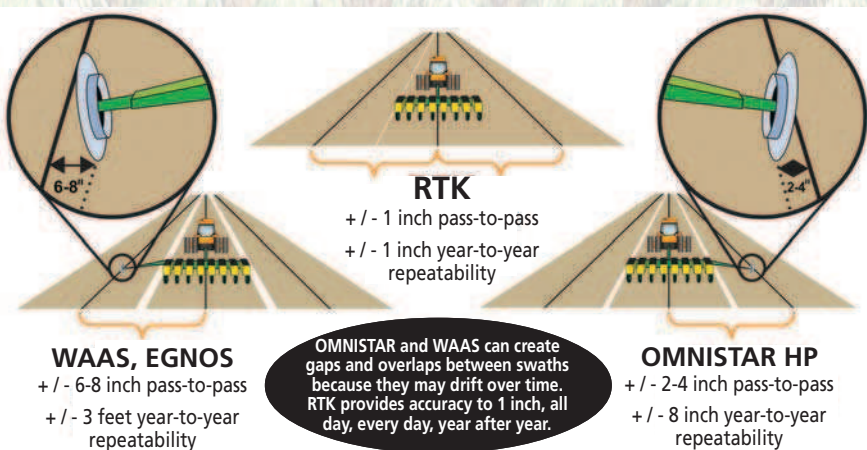

Compared to other systems, MyWay RTK offers farmers flexibility with planting. With a cellular/internet-based system, gone is the requirement to be in line with a tower; the signal is accessible up to 25 miles away. No new purchases are required, because the flexible technology structure of MyWay RTK is designed to interact with industry-standard GPS systems.

One of the advantages of MyWay RTK is just one subscription will include multiple coverage areas for clients with many fields.

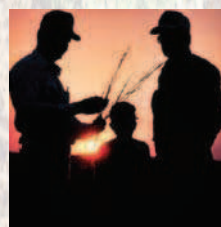

The very reason this service exists is to provide open-access to MyWay RTK for all brands of equipment and hardware.

For additional information, stop by one of our 5 Oregon locations or contact Michael Short at 541-915-7800, michael.short@agwestsupply.com. For more information about MyWay RTK and to view coverage maps visit MyWay RTK.com
