FLUID MILK AND CREAM REVIEW - WEST (USDA Market News) Feb. 8

In California, getting trucks to haul condensed skim milk out-of-state has become a little easier this week compared to last week.

However, early reservations are needed to get them on time. Milk supplies remain plentiful in California although they are lower than last year. Milk production is seasonally up, but Class 1 orders are steady.

According to some contacts, current prices for cream in California are lower. Therefore, a few manufacturers are purchasing more cream to take advantage of the lower prices.

However, due to limited capacity, they cannot

purchase too much. Industry participants say that Class IV orders for the upcoming festivities will start to ramp up in the weeks to come

> The January 4a price (butter/powder) in California is \$12.93. down \$0.43 from the previous month, and \$2.74 lower from a year ago. This compares to the Federal Order Class IV price of \$13.13 for January.

\$0.15 from the previous month, and \$2.62 lower from a year ago. This compares to the Federal Order Class III price for January at \$14.00.

In Arizona, weather conditions are boosting cows' well-being. As so, milk yield is trending higher to the point where processing plants are working at full capacity with not much down times. Cream is also abundant in the state and active

The January 4b price (cheese) is \$13.37, down

cream churning is one of the main ways manufac turers are clearing excess cream loads.

Milk output in New Mexico is steady to slightly increasing. Repair and maintenance projects a some Class III plants are causing them to take less milk. Nonetheless, handlers are redirecting some of the milk to plants that can take on extra

Holdovers are currently higher, and they are expected to remain the same for the rest of the

Class I intakes are down while Class II demand

Pacific Northwest milk production is coming up slightly, following seasonal patterns. Cow comfort is favorable, and as a result, milk production per cow is solid for this time of year.

Manufacturers say milk intakes are in good balance with processing needs. Bottling de-

Colorado, milk production is steady. Industry contacts say milk intakes are in fairly good balance with processing needs, thanks, in part, to active Class II and III manufacturing.

farmers and dairy processors.

Some farms may lose the market for their

SOUTHERN CALIFORNIA

delivered to store door.

St. Joseph, Mo. Last week This week 308,500 326,900

Compared to Feb. 2: Steers and heifers sold 1.00 lower to 4.00 higher. Many market comments this week referred to the quality of the runs being above average to outstanding as bidders and buyers bellied up to the ring and were active participants.

Even though horrible weather conditions were realized in many places this week, the demand for quality stock was not diminished one iota. On Wednesday at Hub City Livestock Auction

in Aberdeen, S.D., a load of 766 lb red hided heifers sold for \$1390 per head or near 181.50/cwt. Also on Wednesday at Bassett Livestock in Nebraska a half load of 771 lb heifers sold at 170.00 and at Huss Platte Valley Auction in Ke-

arney, Neb., a short load of 747 lb heifers sold at 168.00. In the hills of north central Missouri at Green City Livestock Auction, a large package of 719 lb heifers sold at 164.00.

These consignments are from reputation ranches and were sold mostly to repeat customers who come back year after year to buy the same genetics. Even though replacement heifers have been

the talk in this column the last couple weeks, the mature cattle slaughter has increased an average of almost 7700 head per week for the first four harvest weeks of the new year. With the increase in drought conditions

throughout the country more of those older cows are not getting another chance to give that rancher one more calf to sell. The late summer and fall pasture growth was diminished with the lack of rainfall in the major cow/calf states and hay stocks are being consumed steadily as winter rolls on. Quite a lot of hay from Nebraska is being

trucked to out of state feedlots and dairies. Some ranchers are loading up on hay, especially alfalfa hay, to supplement cows and heifers after calving. Some cattlemen are having to supplemen cows on cornstalks as most are under snow and cows are having a hard time rummaging up a enough mega calories to keep them going when the temperatures get in the teens and below. Compared to last Friday, the CME cattle com-

plex saw the Live Cattle Contracts lower; the front month Feb being 0.33 lower, the next four being 2.07 to 2.58 lower. The front five Feeder Cattle contracts were 2.50 to 4.72 lower. This week stocks went on a wild roller coast-

er ride as the Dow posted its worst week since 2008. From the Dow's highest close on Jan. 26 of 26,617, a major correction started Feb. 2 with a
