TOP 6 MYTHS ABOUT BREAST CANCER

1. **"You can't get breast cancer if it doesn't run in your family."**
   False: More than 85% of women have no history of the disease.
2. **"You will definitely get breast cancer if it runs in your family."**
   False: Many times, cancer runs in the family because of similar lifestyle habits - habits you can control and change to lower your risk.
3. **"You don't need mammograms after menopause."**
   False: 2 out of 3 invasive breast cancers are found in women age 55 or older. Your risk of developing breast cancer increases as you get older, so getting regular screenings is important.
4. **"Men can't get breast cancer."**
   False: More than 2,000 men are diagnosed with breast cancer every year. Men should not ignore breast lumps and should have all breast changes checked.
5. **"Surgery and needle biopsies can cause breast cancer to spread."**
   False: Needle biopsies to diagnose breast cancer do not cause cancer cells to spread, nor does exposure to air during breast cancer surgery. Sometimes a surgeon will find more cancer than the imaging scans or x-rays showed, but in those cases the cancer was already there.
6. **"There is nothing you can do to lower your risk."**
   False: While you can't change certain risk factors- like being female and having a family history of breast cancer- you can do a lot to help reduce your risk. In a word: lifestyle. Exercise more and eat healthier, especially if you are overweight. Limit or eliminate alcohol and quit smoking. Being responsible when it comes to your health goes a long way in breast cancer prevention.
