Dairy Report

Compiled by USDA Market News Service • Madison, Wis.

Fluid Milk and Cream — West Jan. 3
In some areas of the West, milk surplus-

es have been noted above projected vol-umes. According to market participants, this could be because Class I and II sales were less than expected.

Currently, California milk production is increasing more than in previous years. Nonetheless, coverages were largely available to process all the milk within the

Class I sales in the state are returning to normal as schools prepare to reopen. No issues with milk handling surfaced during the holiday. In Arizona, balancing plants are full of

milk due to the closing of small facilities earlier in the week for the holiday. Fortunately, there are adequate capacities for milk handling. Milk orders from retail outlets are increasing while intakes from educational institutions are slowly returning to pre-holiday levels. Class II intakes remain active as cream prices are low.

New Mexico milk production is stable, following the same pattern as last week. Many plants are back to normal schedules after the holiday, and they are running at full capacities to process all the excesses of milk. Class I and II sales increased while Class III demand is declining. Milk production in the Pacific Northwest

is strong. Dairy contacts suggest milk components have maintained high levels and, as a result, cream is plentiful as well. In some cases, this is putting downward pressure on cream multiples Milk intakes are slowly returning to normal following the winter holidays. Bottling demand is slowly returning to pre-holiday levels. Manufacturers are not having any trouble getting the milk needed for processing.

Milk production in the mountain states of Idaho, Utah and Colorado continues at

strong seasonal volumes. Manufacturers have plenty of milk available for almost all processing needs. Any excess loads of milk are getting pushed into surrounding states. The western condensed skim market is stable, with products largely accessible to the market. More condensed skim moved to the dryers during the past In the West, cream is plentiful and is

trading at low multiples. Cream multiples for all Classes are 1.00-1.17. Butter processors are making more butter and replenishing their stocks for future usages.

Cattle Market Reports

116,000

Compiled by USDA Market News Service • Oklahoma City-Des Moines-St. Joseph, Mo.-Moses Lake, Wash. NATIONAL FEEDER AND STOCKER CATTLE (Federal-State Market News)

St. Joseph. Mo. Jan. 4 2 wks ago This week Last year

183,800

79,300

Compared to two weeks ago, steers under 700 pounds were mostly 1.00-4.00 higher, instances up to 9.00 higher in Nebraska; steers over 700 pounds moved at price points that were steady to 4.00 lower.

The Southeastern region saw sharply higher

prices on all classes, due to good demand and very light receipts.

Muddy pen conditions as temperatures increased in the North and rain and snow in the

South have caused concerns, especially on the placements of heavier weight cattle. This week's receipts across the country were hindered for several reasons. Not all markets were operational this week, due to the holiday interruptions early week; heavy rains throughout the Southeast and winter storms on much of the North Central and South Center regions. The majority of the fed cattle trade this week took place on Thursday, with the bulk of live sales in the Southern Plains and Nebraska trading steady at 123.00

Late Friday morning, light dressed trade evolved in Nebraska at prices were steady compared to last week at 195.00. Poor feedlot con-

ditions have continued to plague most feeding regions, lowering cattle performance. Boxed beef cutout values were firm to higher on Choice and higher on Select. The volume reported this week was slightly more than last

On the Choice side, rib cuts were steady to weak while all other cuts firm to higher. Ground beef prices were slightly higher this week on lighter volume. Forward negotiated sales remain light but mostly steady when compared to last week. Beef trimmings were higher on moderate to good demand and light to moder-

ate offerings. Auction volume this week included 68 percent weighing over 600 lbs and 38 percent heifers Northwest Weighted Average

Direct Feeder Cattle Jan. 4 This week Last week Year ago 634 Compared to last week: Feeder steers and heifers not established this week. Supply included 0 percent over 600 lbs and 0 percent heifers

Unless otherwise stated prices are FOB weighting points with 2-3 percent shrink or equivalent and a 5-10 cent slide on calves and a 4-12 cent slide on yearlings from base weights Current sales are up to 14 days delivery. Feeder Steers Medium and Large 1: Not es

OSU to host pollinator summit

established

pollinator-enhancement programs can be developed and enhanced is the subject of the PNW Pollinator Summit & Conference slated for Feb. 14-16 at the Oregon State University CH2M Hill Alumni Center in Corvallis.

A goal is to improve on-the-ground initiatives and reduce knowledge gaps by better coordinating natural resource professionals, land managers, pollinator enthusiasts, university extension agents and other educators, organizers said in a news release.

Scheduled keynote speakers are wildlife biologist Sam Droege of Patuxent Wildlife Research Center and the U.S. Geological Survey; agricultural extension and research specialist Elina Nino of University of California-Davis Cooperative Extension; and assistant biology professor Rebecca Tonietto of the University of Michigan-Flint and The Porch Project. About 20 speakers and presenters are scheduled.
