Compared to last test: All grades of Alfalfa and Timothy for domestic and export steady. Trade moderate to active this week as export and domestic buyers remain active. Demand remains good on Alfalfa, very light on Timothy as producers are having a hard time getting any firm offers. Many producers are cutting 4th. Some major exporters in the trade area have old crop still unmoved sitting in producers' hay barns. Feed store/retail hay not tested this week. All prices are dollars per ton and FOB the farm or ranch unless otherwise stated. Delivered prices include freight, commissions and other expenses.

### Dairy Report

Compiled by USDA Market News Service • Madison, Wis.

**Fluid Milk and Cream — Western U.S. Aug. 22**

California milk production is flat to down, but it is balanced with the needs of buyers. Less milk is going to balancing plants' accounts as most of it is being used by lower classes of milk. With schools being back in session in many parts of the state, bottled milk intakes continue to increase.

In Arizona, milk production has declined this week. The weather has been very hot, putting stress on cows and on their ability to produce milk. Milk supplies are not enough to satisfy all processing obligations. Some milk is moving from Utah to Arizona.

tributing to strong milk output. Bottled milk requests are unchanged from the previous week, but they are anticipated to pick up in the coming weeks when schools reopen.

Milk production in the mountain states of Idaho, Utah and Colorado is still solid. While most of the milk produced in Idaho is being processed in state, in Utah, some milk is moving to Arizona to help meet processing requirements. The summer climate has not much affected milk output in the mountain states. Class I intakes are steady to a bit up. Western condensed skim inventories are steady to down.

Some loads are moving from Texas to Ar-
