

HOW WE HELP WITH POWER IRRIGATION REPAIRS ON THE FARM

When an irrigation customer requests a service disconnect or reconnect, please contact customer service at 509-766-2505 to schedule.

Prior to service reconnect, our customer service representatives need to know:

- 1 Where and when the work occurred.
- 2 What type of work was involved, such as:
 - Alter an existing electric service
 - Replace a main breaker
 - Add electric service disconnects
 - Add or change a pump or irrigation circle

Be advised that if these types of projects were involved, we will need to know the following before equipment can be energized:

- You must have a valid permit for the work in place (where permit is required).
- Verify that an L&I inspection is complete and sticker is attached to the facility being energized.

Visit www.lni.wa.gov for additional details.
