DAVENPORT (Stockland Livestock Auction)

April 11 Comments: Monday's regular cattle sale featured near 300 head, with a good run of cows, pairs and older bred cows Slaughter cows were steady to higher, with the best of the cows bringing 96.50 cents per pound, and an average price of 87-89 cents per pound. Most pairs were split, with a strong cull market and baby calf market making them dollar out high er separately. Younger, lighter cow calf pairs brought \$1350-\$1425. Bred cows, mostly heifers or 2-3-year-olds weighing 1100-1300, brought between \$1100 and \$1400 per head. Not enough of any one class of feeder cattle for a true market test, though there was good farmer

Dairy Report

Compiled by USDA Market News Service • Madison, Wis.

Fluid Milk and Cream - Western U.S April 14 California milk production is steady, following

seasonal trends. The California Crop Progress report from NASS for April 11, 2022, relays that wheat and alfalfa are doing well, while alfalfa crops are being cut and baled in the state. Some stakeholders report that tanker

availability is tight and that they are having some difficulty finding trucks to move loads of milk out of state. Labor shortages and some unplanned downtime are causing some production facilities to sell milk at a discount. Demand is steady across all Classes.

Warmer weather in Arizona has contributed to a decline in milk production this week. Some plant managers report that they are pulling in milk from out of state to fulfill local production demand. Stakeholders say that high transpor-tation costs are limiting their ability to purchase affordable loads of milk from other states. The April 11, 2022, Arizona Crop Progress report from NASS showed that harvest is taking place on over three-quarters of alfalfa-producing acreage Demand for Class III is strengthening, while Class I demand is steady.

Milk production in New Mexico is steady some contacts believe that production may be approaching its seasonal peak. Milk is available in the state to meet current production needs Some producers report that they are sending loads to nearby states and other regions with tighter milk availability. Class I demand is steady to higher, while Class II demand is steady. Milk production in the Pacific Northwest, is

steady to higher this week. Contacts report that

milk production is flat compared to last year. Class I demand is trending higher as educational institutions in the area have reconvened following spring break. Demand for Class II and Class III are steady.

Warmer weather in the mountain states of Idaho, Utah and Colorado is contributing to increased farm level milk production. Spot milk continues to be available for producers in the area. Contacts report that some purchasers in other parts of the West are interested in purchasing available milk supplies, but a shortage of tankers is limiting the ability to move large volumes of milk farther away. Labor shortages are causing some plant managers to run below capacity in the area.

Across all Classes demand is steady. Contracts for condensed skim are steady in the West. Contacts report that condensed skim is available, but that available tankers are limited, making it difficult for sellers to move loads.

Demand for cream is strong in the region Cream cheese and ice cream producers are purchasing loads of cream as they ramp up production in preparation for warmer weather Butter makers are also busy utilizing cream to build inventories. Spot purchasers say that cream loads are available. Some purchasers from other regions, where cream inventories are tighter, are looking to the West to meet current market demands.

been 28.59 for the last eight weeks. There was some moisture received this week in areas that very dearly needed it. But more is needed, which is keeping some pressure on the light cattle market that could run on grass as yearlings. In the Northern Plains, the Easter holiday and blizzard conditions hampered receipts. With the Dakotas in the heart of calving season, temperatures are normally in the 40s and 50s; however, single digit low temps were normal for several days this week. Couple that with 50 mph winds and inches upon inches of snow that brought hazardous and treacherous conditions in their area.

No doubt that the recent drought has taken a toll on the psyche of ranchers in the affected area. However, if they don't have but a portion of their calf crop to sell in the fall, it could be hard times ahead as replacement cattle become more expensive in the near future, when cow herd contraction is in full swing. Negotiated live trading of fed cattle in the Southern Plains sold 1.00 to 2.00 higher from the previous week at 139.00, while dressed sales in Nebraska sold 3.00 to 5.00 higher at 225.00 to 227.00. Choice boxed beef closed the week 2.15 higher at 272.62, while Select was 1.43 lower at 258.90 for the same period Weekly cattle slaughter under federal inspection estimated at 634K for the week. 37K less than last week and 7K less than a year ago. Auction volume this week included 52 percent weighing over 600 lbs and 45 percent heifers. Northwest Weighted Average Direct Feeder Cattle
