Hav prices are dollars per ton or dollars per bale when sold to retail outlets. Basis is current delivery FOB barn or stack, or delivered customer as indicated. Grade guidelines used in this report have the following relationship to Relative Feed Value (RFV), Acid Detergent Fiber (ADF), TDN (Total Digestible Nutrients), or Crude Protein (CP) test numbers:

GRADE	RFV	ADF	TDN	CP					
Supreme	185+	under 27	55.9+	22+					
Premium	170-185	27-29	54.5-55.9	20-22					
Good	150-170	29-32	52.5-54.5	18-20					
Fair	130-150	32-35	50.5-52.5	16-18					
Utility	under 130	36+	under 50.5	under 16

Dairy Report

Compiled by USDA Market News Service • Madison, Wis.

Fluid Milk and Cream — Western U.S. June 30 Farm level milk production is unchanged this week in California, though contacts report that output is down compared to this time last year. Milk is available for processing in the state. Some stakeholders say that they are sending loads of milk to nearby states where inventories are

tighter. Class I demand is steady. Demand for Class

II and III is lower this week as some production

facilities are preparing for the upcoming holiday In Arizona milk production continues to decline, following seasonal trends. Some plant managers report that additional loads of milk have become available as some production facilities have planned downtime for the July 4th holiday. Reduced food service demand for Class I is also contributing to increased availability in the state. Demand for Class II and Class III is steady to lower. Warm weather in New Mexico is having a negative impact on cow comfort and is contributing to decreased milk output. Contacts report that milk production is down compared to

last year, and this is contributing to some tighter availability. Some plant managers say that they

are sourcing loads of milk from nearby states Demand is steady across all Classes. Milk production is steady to higher in the Pacific Northwest but is down year over year. Contacts

report that cold and rainy weather has been having a negative impact on output throughout June, but that they had some nice, warmer temperatures throughout the last week. Demand for Class I and II are steady to lower, while Class III demand is unchanged. In the mountain states of Idaho, Utah, and Colorado, milk output is steady. Spot loads of milk are available for processing, and some contacts report interest from purchasers in nearby states.

Demand is lower from some production facilities

with planned downtime for the upcoming

holiday. Due to this, Class II and III is steady to

 $lower.\,Demand\,for\,both\,condensed\,skim\,and$

facilities in the region are preparing for a long holiday weekend Contacts say that they expect strong demand to return for cream in the coming weeks as butter makers are keen to build inventories. Cream has become more available for spot purchasing.

Cream multiples are unchanged from last week

cream has declined this week as some production
