"Dear Friend Dwight: Think it about time I am writing you. I got back to Dyea Nov. 10th; stayed one week in Juneau; there is no snow here at Dyes and only about a foot at Sheep Camp and four feet over the summit between the pass and Lake Linderman. What a fool was that I did not stay here as I

I was that I did not stay here as I intended doing instead of turning my back on a country where good wages and good prices are had. If I had stayed at either Sheep Camp or Dyes, I would have cleared up at least \$1500 by this time. When I went away Dyes had one log store, now it is a town alumat as large as went away Dyea had one log store, now it is a town almost as large as Juneau-big buildings going up every day. HINTS ON FRUIT CANNING.

A Few Things That the Housewife Should Remember.

In canning fruit, remember that it is hard and disagreeable work at best, and unless you can come within sight of its highest possibilities, "the game is not worth the candle." Whether it is good, bad or indifferent depends upon your own knowledge and skill. Exclud-ing the air to prevent fermentation is only the A B C of success. Fruit must look as well as taste delicious, and, in order to do this, it must retain its natural flavor and appearance, and be sweetaned with granulated sugar. Fruit for canning must be freshly picked, and a little under rather than over ripe.

All barries except strawberries should be large and firm. With these the smaller the better. Blackberries, no matter how fine or of what kind, are never satisfactory and palatable. Cherry pits add much to the flavor, and when removed from the fruit a handful should be tied in a piece of net and put in the center of each jar. Pear seeds should be used in the same way if the core is removed. Cherries are richer and handsomer colored if the sir-up is made of half currant juice.

up is made of naif currant julce. The skins of green gage plums should be left on and pierosit with a fork be-fore they are cooked. The skins of all other common varieties abould be re-moved. If plums and peaches are immoves. If putting and peacage are im-mersed in boiling water to loosen the skins, only a few should be treated at once, and those should first be put in a wire basket or move. After remaining two minutes or so dip in cold wa-ter and gently rub off the skins.

A silver knife should be used to shred pineapple and pare pears and quinces. Peaches should be put in sirup as soon as pared, and pears and quinces into cold water, to prevent discolors-tion. Peaches are firmer and richer if allowed to remain over night in the sirup before they are cooked. Five or six pits should be distributed through

each quart jar. The most delicate and natural fafor in obtained by cooking the fruit in the jars. This method also does away with the breakage from handling. this rule, but, as both are more quickly cooked tender in clear water, is in

Sherman County intrners have not sown as much ground to grain this fall as is customary, owing to the fact that they were kept busy harvesting until late, and aince harvest have devoted their time principally to getting their grain to market, leaving but little time to devote to seeding. What grain was sown early in the fall looks well. Three tramps went from house to house in Salem, Saturday, Irightesing the women who refused them food. They visited the house of N.J. Damon, and there they met with young Roy Damon, who draw a revolver and or-dered the tramps to proceed with him to the splice station. On the way with his capture, he met Special Officer Hat-ton, who took charge of the hobos and spet them in jall.
