

Hart, Schaffner & Marx

Hart, Schaffner & Marx

ALL OUR NEW FALL SUITS WILL BE HART-SCHAFFNER & MARX

Never in our business experience have we been able to offer our trade such superior Suits as we are now showing. We spared no effort to secure the best Suits that experience, skill and money could make, and we now offer them to you for your choosing. Don't forget what you've a right to expect from our line of superior Suits and you will meet with no disappointment, prices ranging from \$5.00 to \$25.00.

Smiling shoppers reflect the happy spirit which dominates every corner of this big store. The aisles are filled with happy shoppers completely surrounded by bargains. No time to think of economy—we have done that for you happily. A smiling shopper becomes a loyal customer. We want your friends to learn of the spirit of our store. A happy bargain makes a happy buyer. COME, it's bargain time.

CLOSING OUT ON ALL ODD SUITS. ONLY A FEW LEFT.

LOT O. \$5.00 to \$6.50 go at.....	\$3.95	LOT I. \$8.00 to \$10.00 go at.....	\$5.95	LOT II. \$12.00 to \$16.50 go at.....	\$8.95	LOT III. \$16.50 to \$22.00 go at.....	\$12.00
---------------------------------------	--------	--	--------	--	--------	---	---------

WE CARRY THE BIG END OF ALL BOYS' CLOTHING CARRIED IN MEDFORD. FROM THE SHEEP TO THE CLOTH—FROM THE CLOTH TO THE SUITS.

Knee Pants.....	\$1.50 to \$7.50	Men's Shawknit Socks, 25c vals.,	all that is left goes at..10c pair	Men's and Boys' Straw Hats.	Lot No. 1 at 50c Lot No. 2 at 75c	Remember, our line of Men's and Boys' Shoes is complete.
Long Pants.....	\$3.50 to \$12.50					

DEUEL & KENTNER

LOCAL MINES.

(Continued From Page 4.)

the cost of mining being thereby reduced about one-half. Thirty-six buckets are used, each of which holds 8 cubic feet of material.

The average depth of pay gravel is about 33 feet, but deposits to depths of 46 feet have been mined without reaching bed rock. Much of the material is less than five inches in diameter, but boulders of large size are numerous. The best values are to be found in a bluish gravel, which is generally reached at a depth of about 12 feet. This gravel is from 8 to 18 inches in thickness, from 8 to 18 feet in thickness. Below it is a fine plastic clay, which is difficult to handle, and which carries practically no gold. In the present workings this clay is not being mined. The property contains more than 1200 acres of placer ground, much of which has been thoroughly pros-

The Sterling mine is also described though since the pamphlet was prepared J. D. Heard has severed his connection with the company. It says:

"The Sterling mine is on Sterling creek, a branch of Little Applegate river, and is about eight miles from Jacksonville. It is owned by the Sterling Mining company, of which J. D. Heard is manager. The property includes about 2000 acres, extending from a point below the mouth of Sterling creek and over the divide to Griffin creek. The gravel bank on the west side of the present workings is more than 40 feet in thickness, but on the east side it is only about 20 feet thick. The section consists of gravel and boulders, the latter being rather uniformly distributed throughout the section. Many of the boulders are small, but some are more than two feet in diameter and few exceed eight feet. They are mainly of greenstone.

"Much mining has been done on Sterling creek by the present com-

pany from its mouth for more than three miles, then a channel to the east of this stream was followed for about half a mile. Here a channel, which is named Boulder Channel, was struck, and this has been followed for about a quarter of a mile to the present workings. The bed rock of these workings is a little higher than the present stream bed and is about 100 yards east of it. The values are found across a width of nearly 200 feet. The gold is medium coarseness and is usually well rounded, although angular nuggets are also present. The average thickness of the gravels in the Boulder channel is about 40 feet. It is of interest to note that in these gravels the tusks and awes of a mammoth, as well as other mammalian bones have been found. The bedrock at the mine is greenstone, in which are patches of slaty tuffs. These rocks have been considerably sheared and veinlets of quartz are present. The strike of the slaty rocks is north 8 degrees east, the dip about 60 degrees west. In the present workings

is a dike running north 20 degrees east, containing cross veins which do not extend beyond the dike. The slope of the bedrock is about 2 feet in 100 feet. In 1908 mining was in progress from March until August, during which time about one acre was mined. The value of the gravels was about 40 cents to the cubic yard.

"The mine is well equipped with giants, ditches and flumes. The longest ditch is about 27 miles in length. The water enters the ditch from Little Applegate river about 12 miles above the mouth of Sterling creek. At the mine the head of the water is now only about 80 feet. A pipe line is being planned to carry water from Squaw lake to the mine, a distance of 17 miles. The mine has been equipped for hydraulic mining for about 30 years. The Sterling Mining Co. was incorporated in 1872. There were issued only 40 shares of stock, which have been held by a very few shareholders. The total production of the mine is said to exceed \$3,000,000."
